Choose a workspace

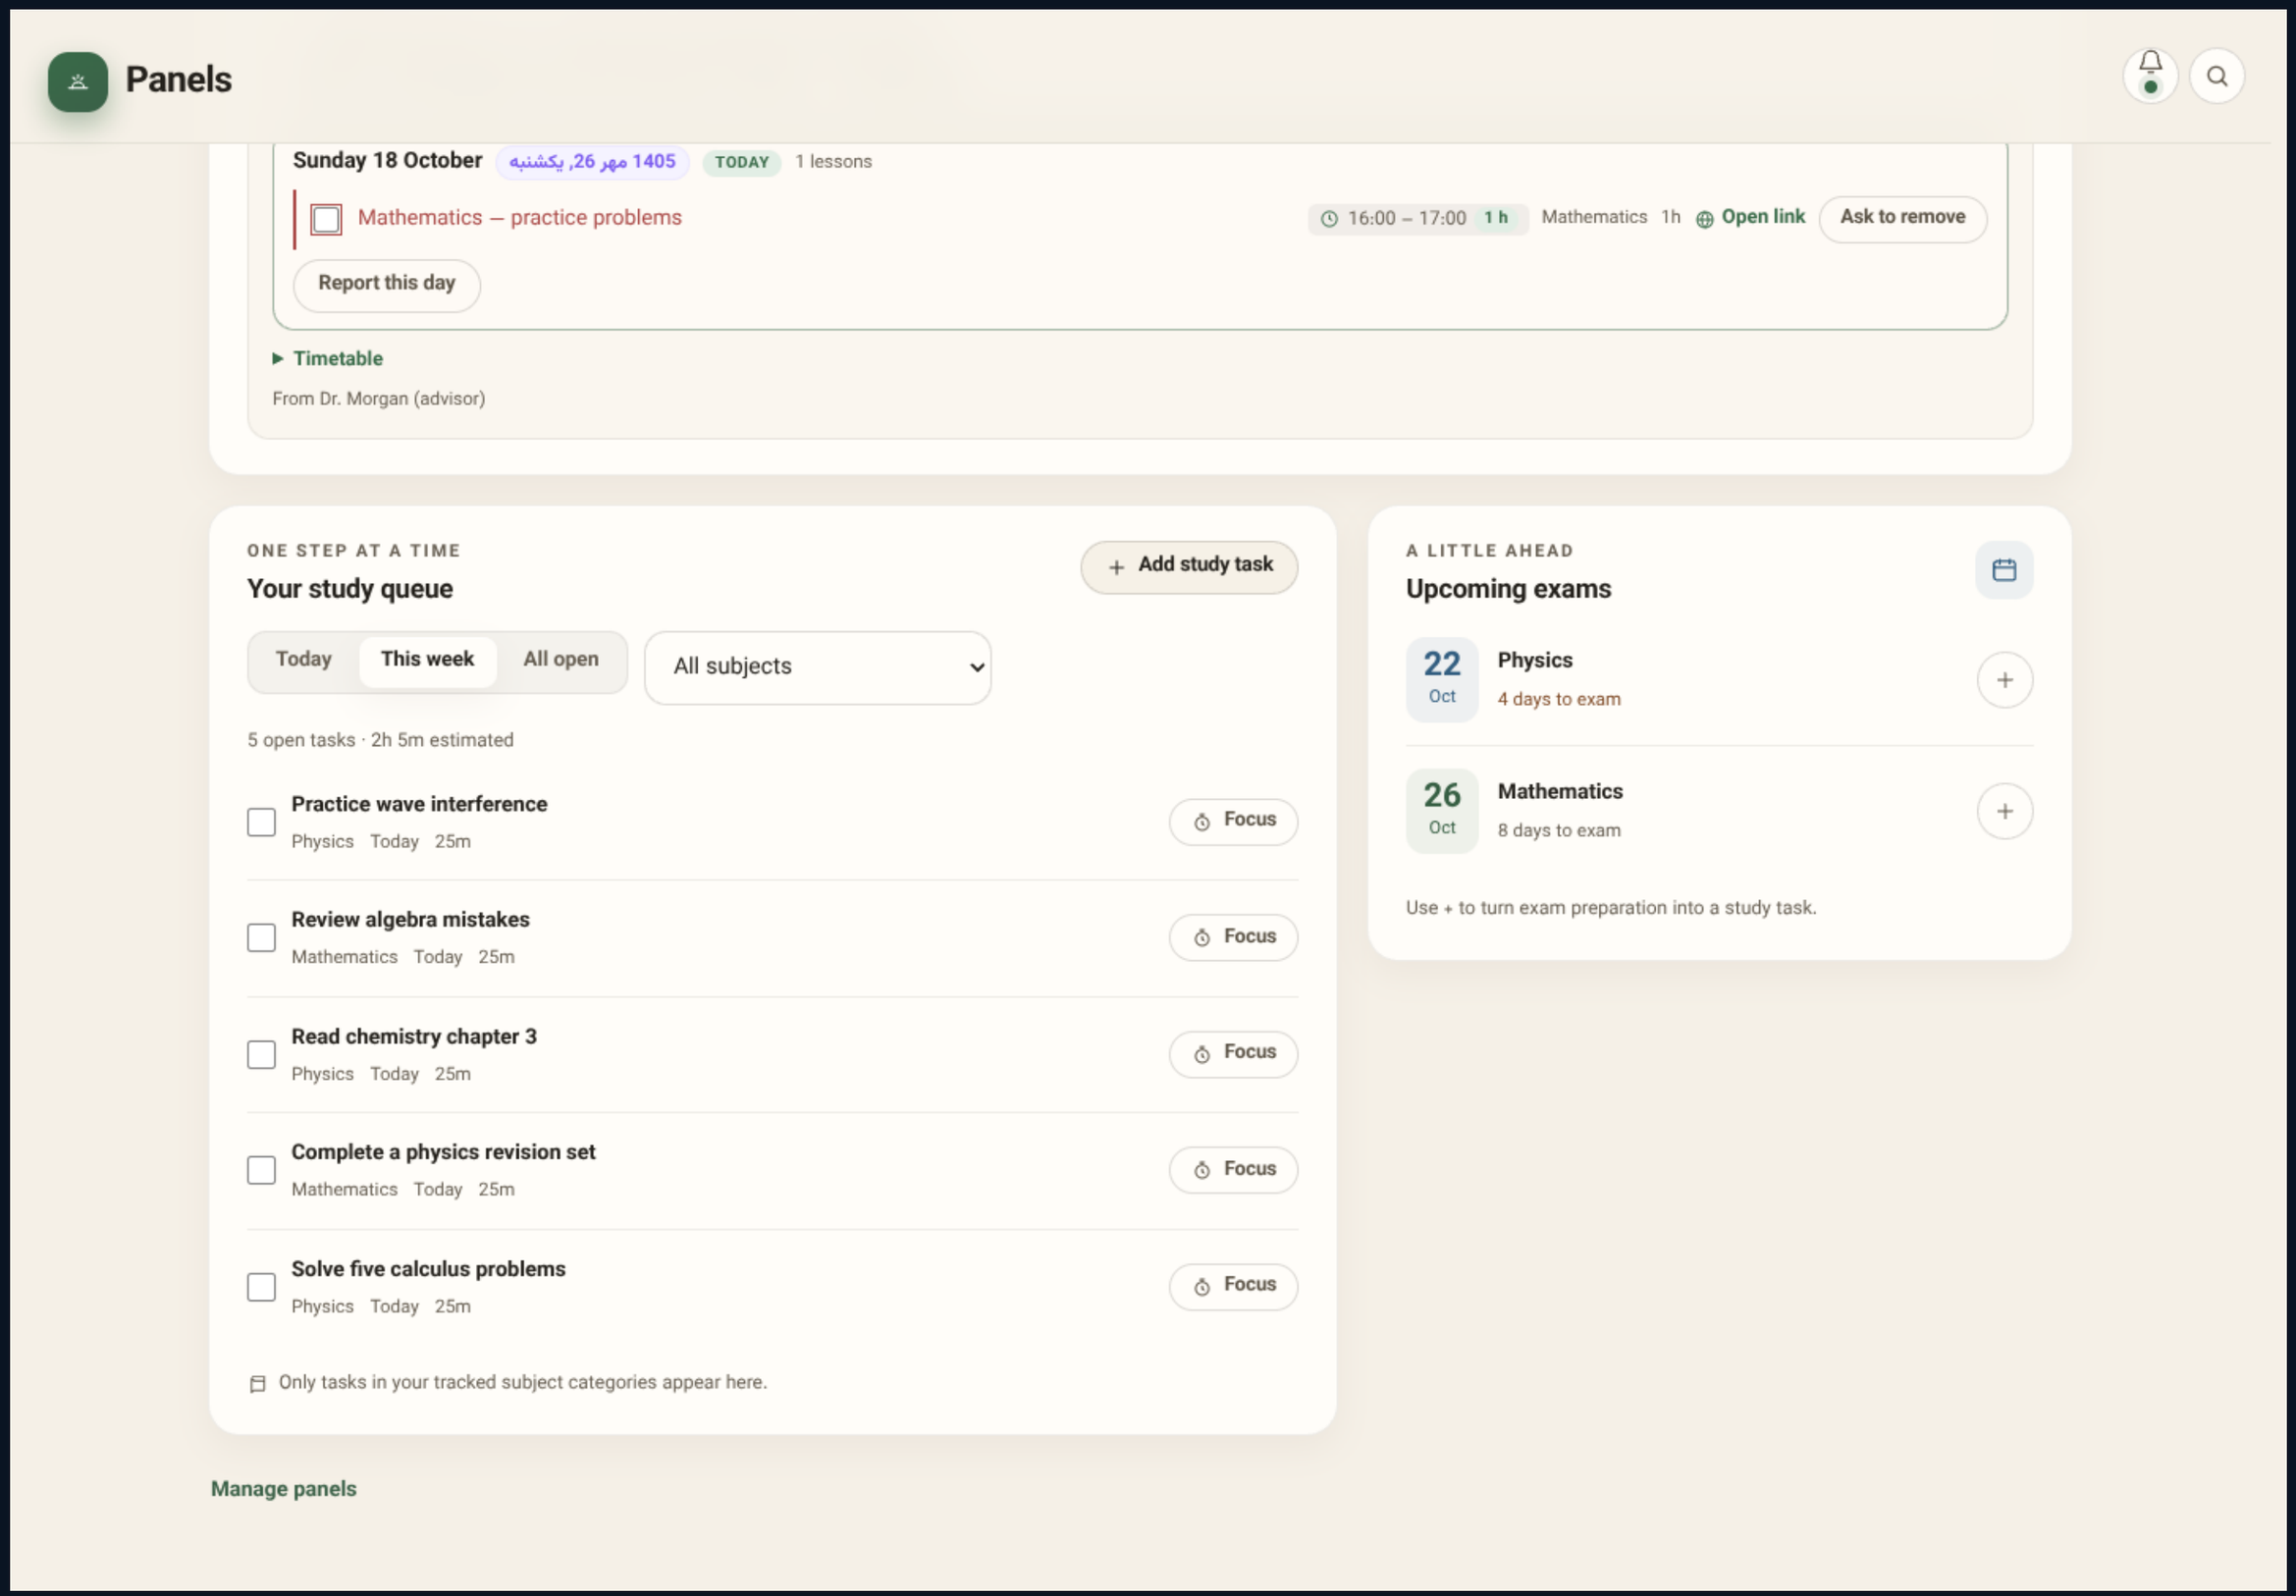

Actual Planner screens, captured with fictional local sample data. Personal, Student and Guardian remain distinct. This is a visual walkthrough—not proof of live cross-account sync, video playback, media upload or AI operation.

Student: Today

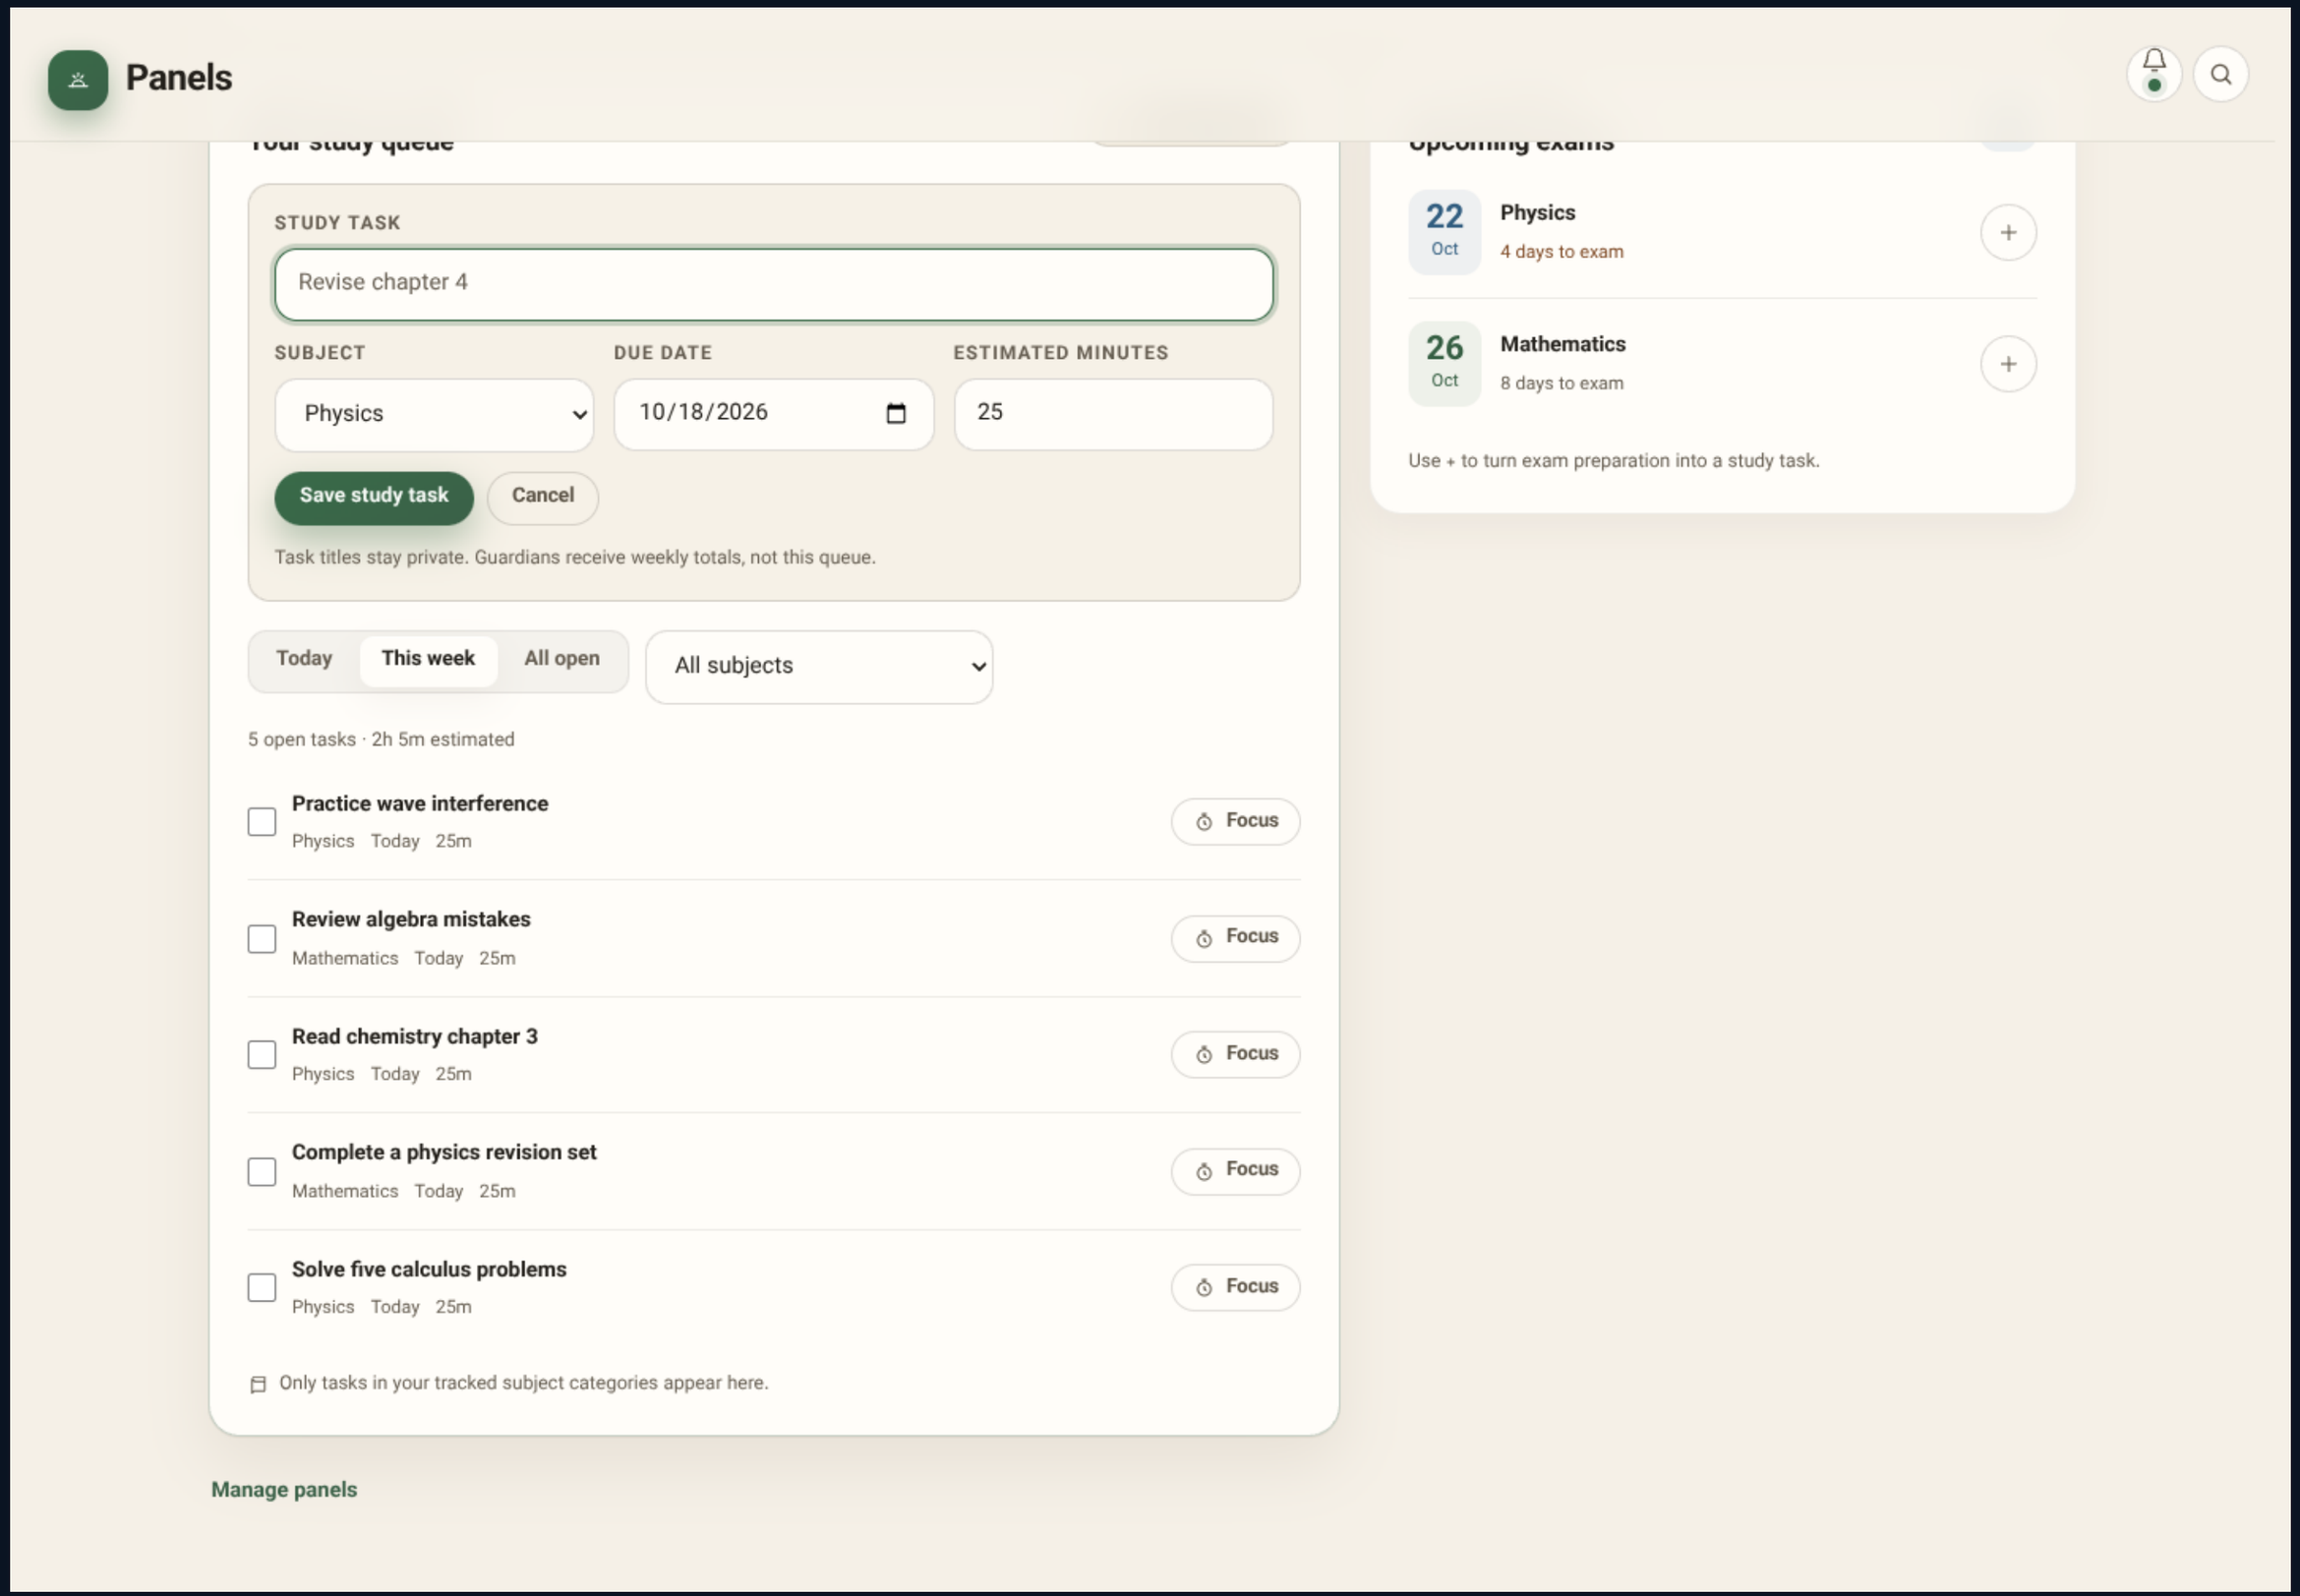

Momentum, praise and current priorities bring the next study action into view.

Study queue and exams

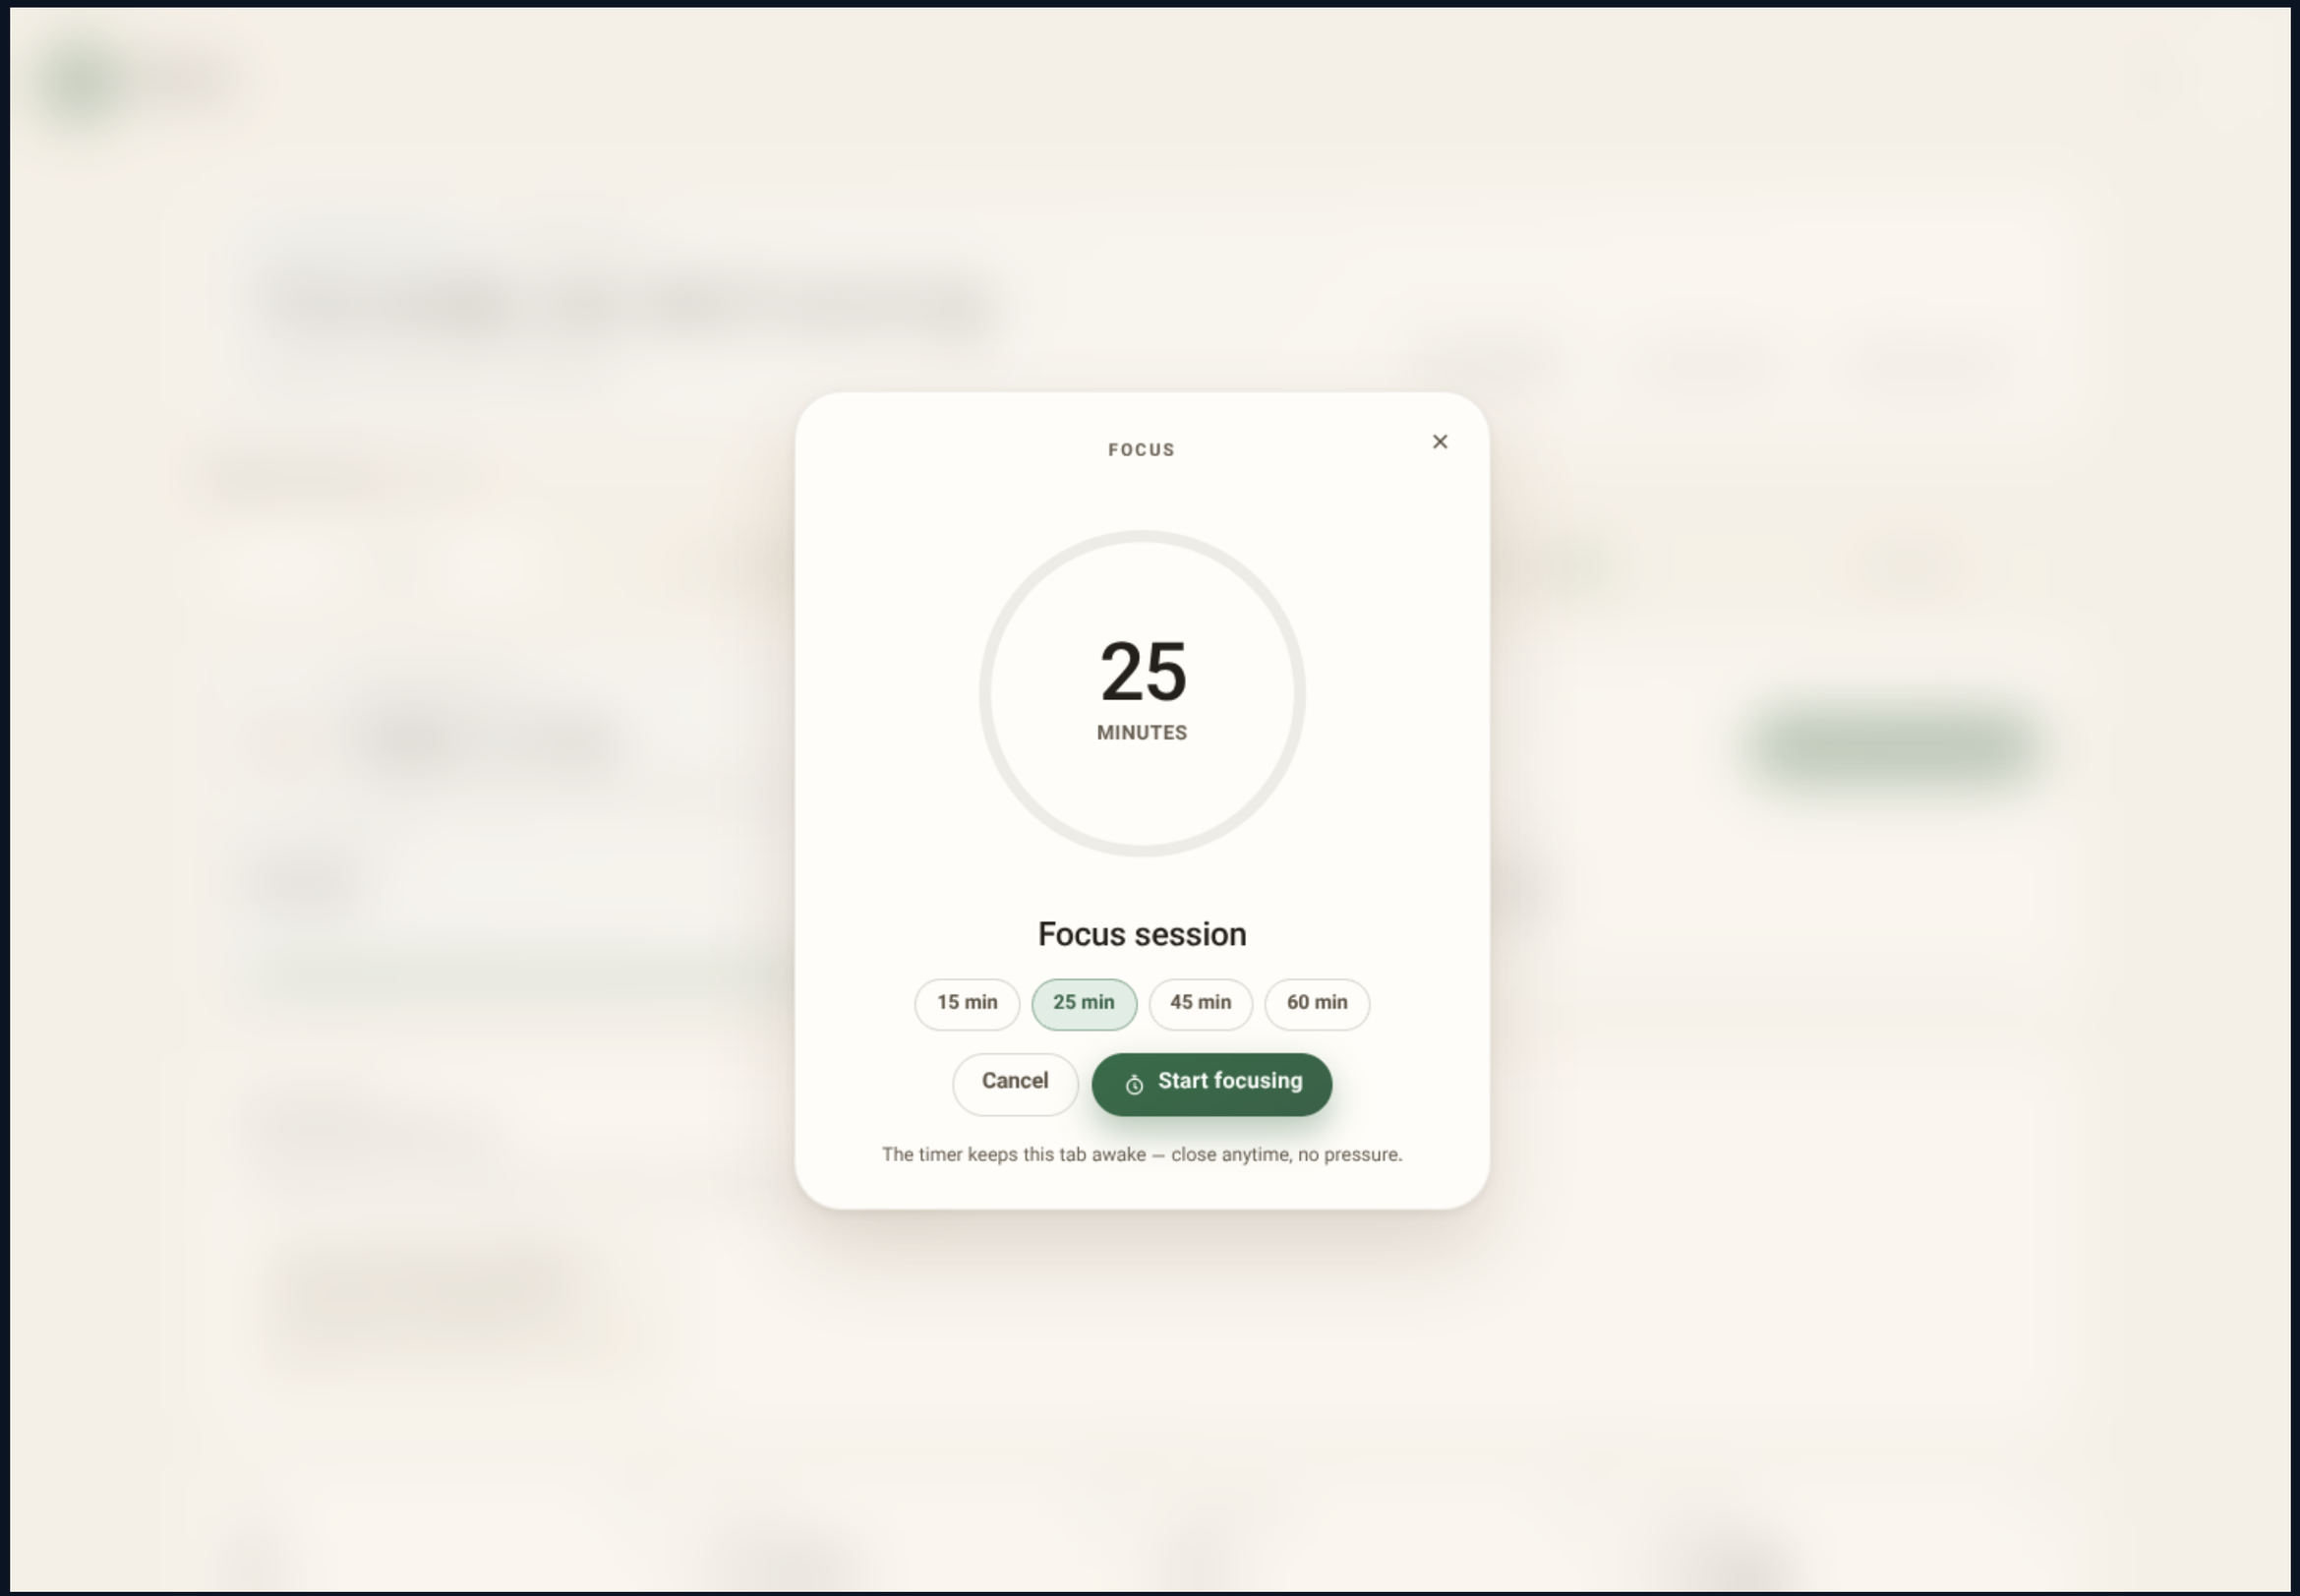

Filter open study work, create subject-linked tasks, complete them or start focus. Upcoming exams can create revision drafts.

Create a study task

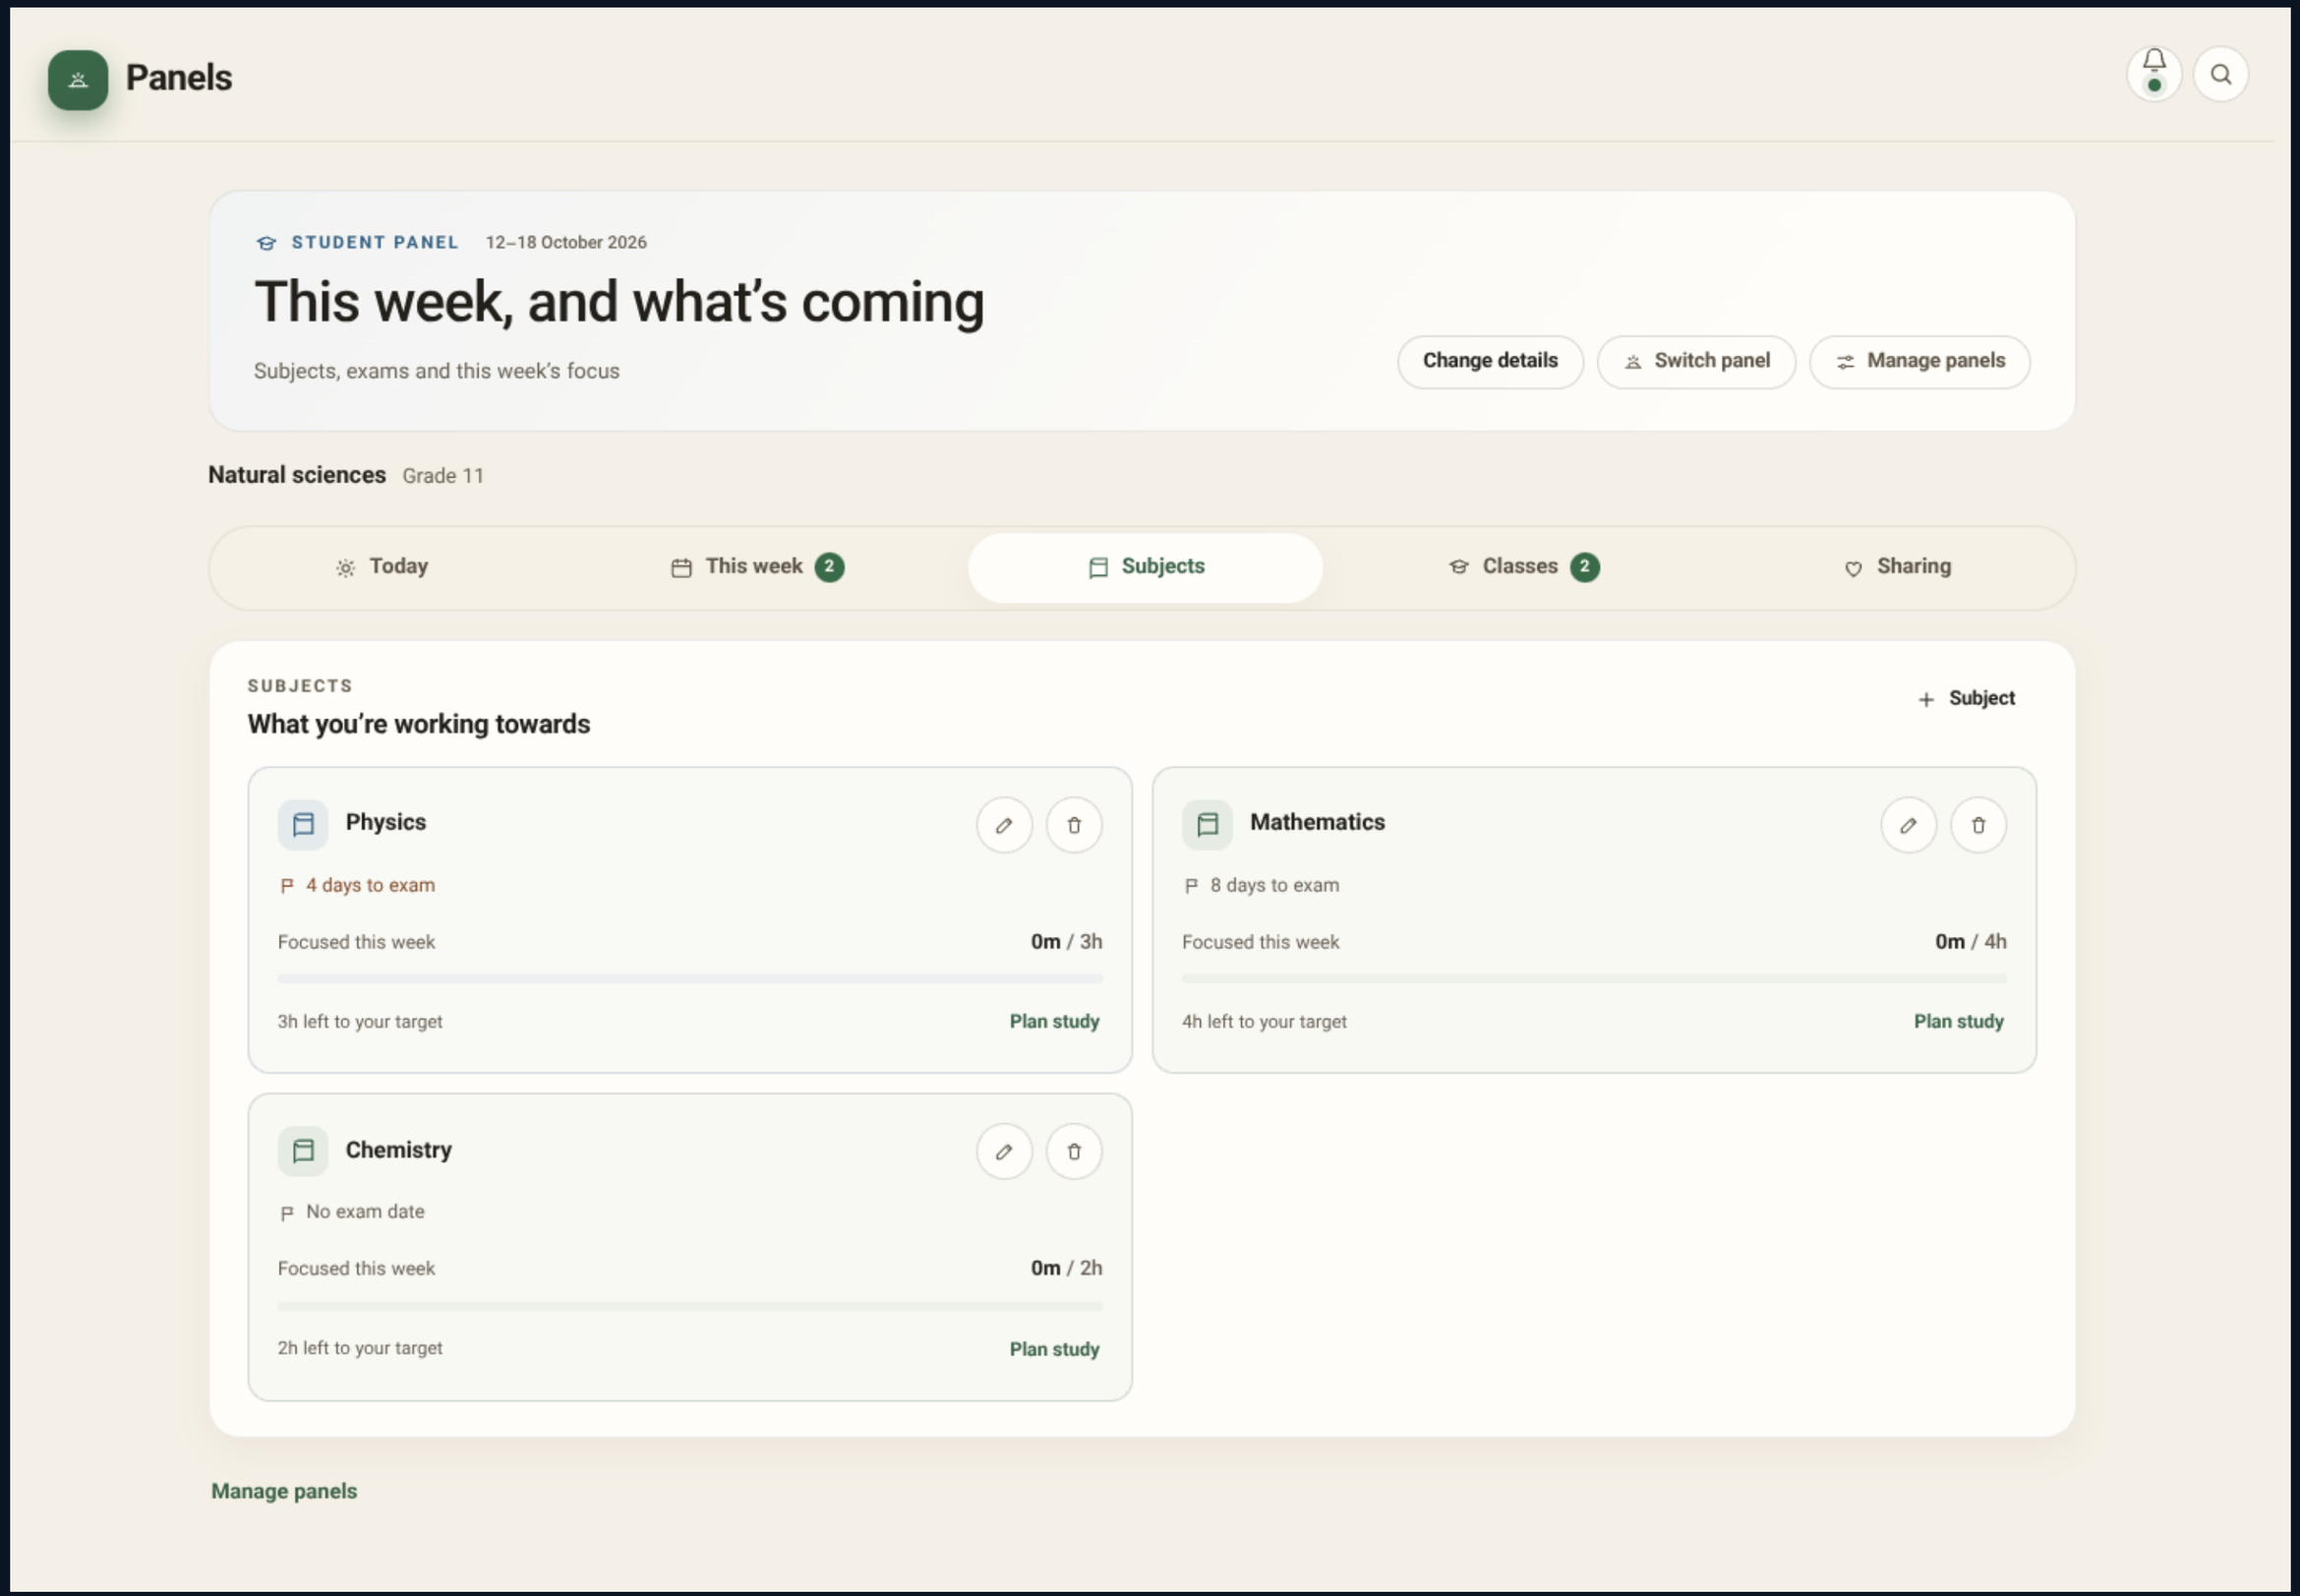

Choose a subject, title, date and estimated minutes. These are the student’s own tasks.

Start a focused study session

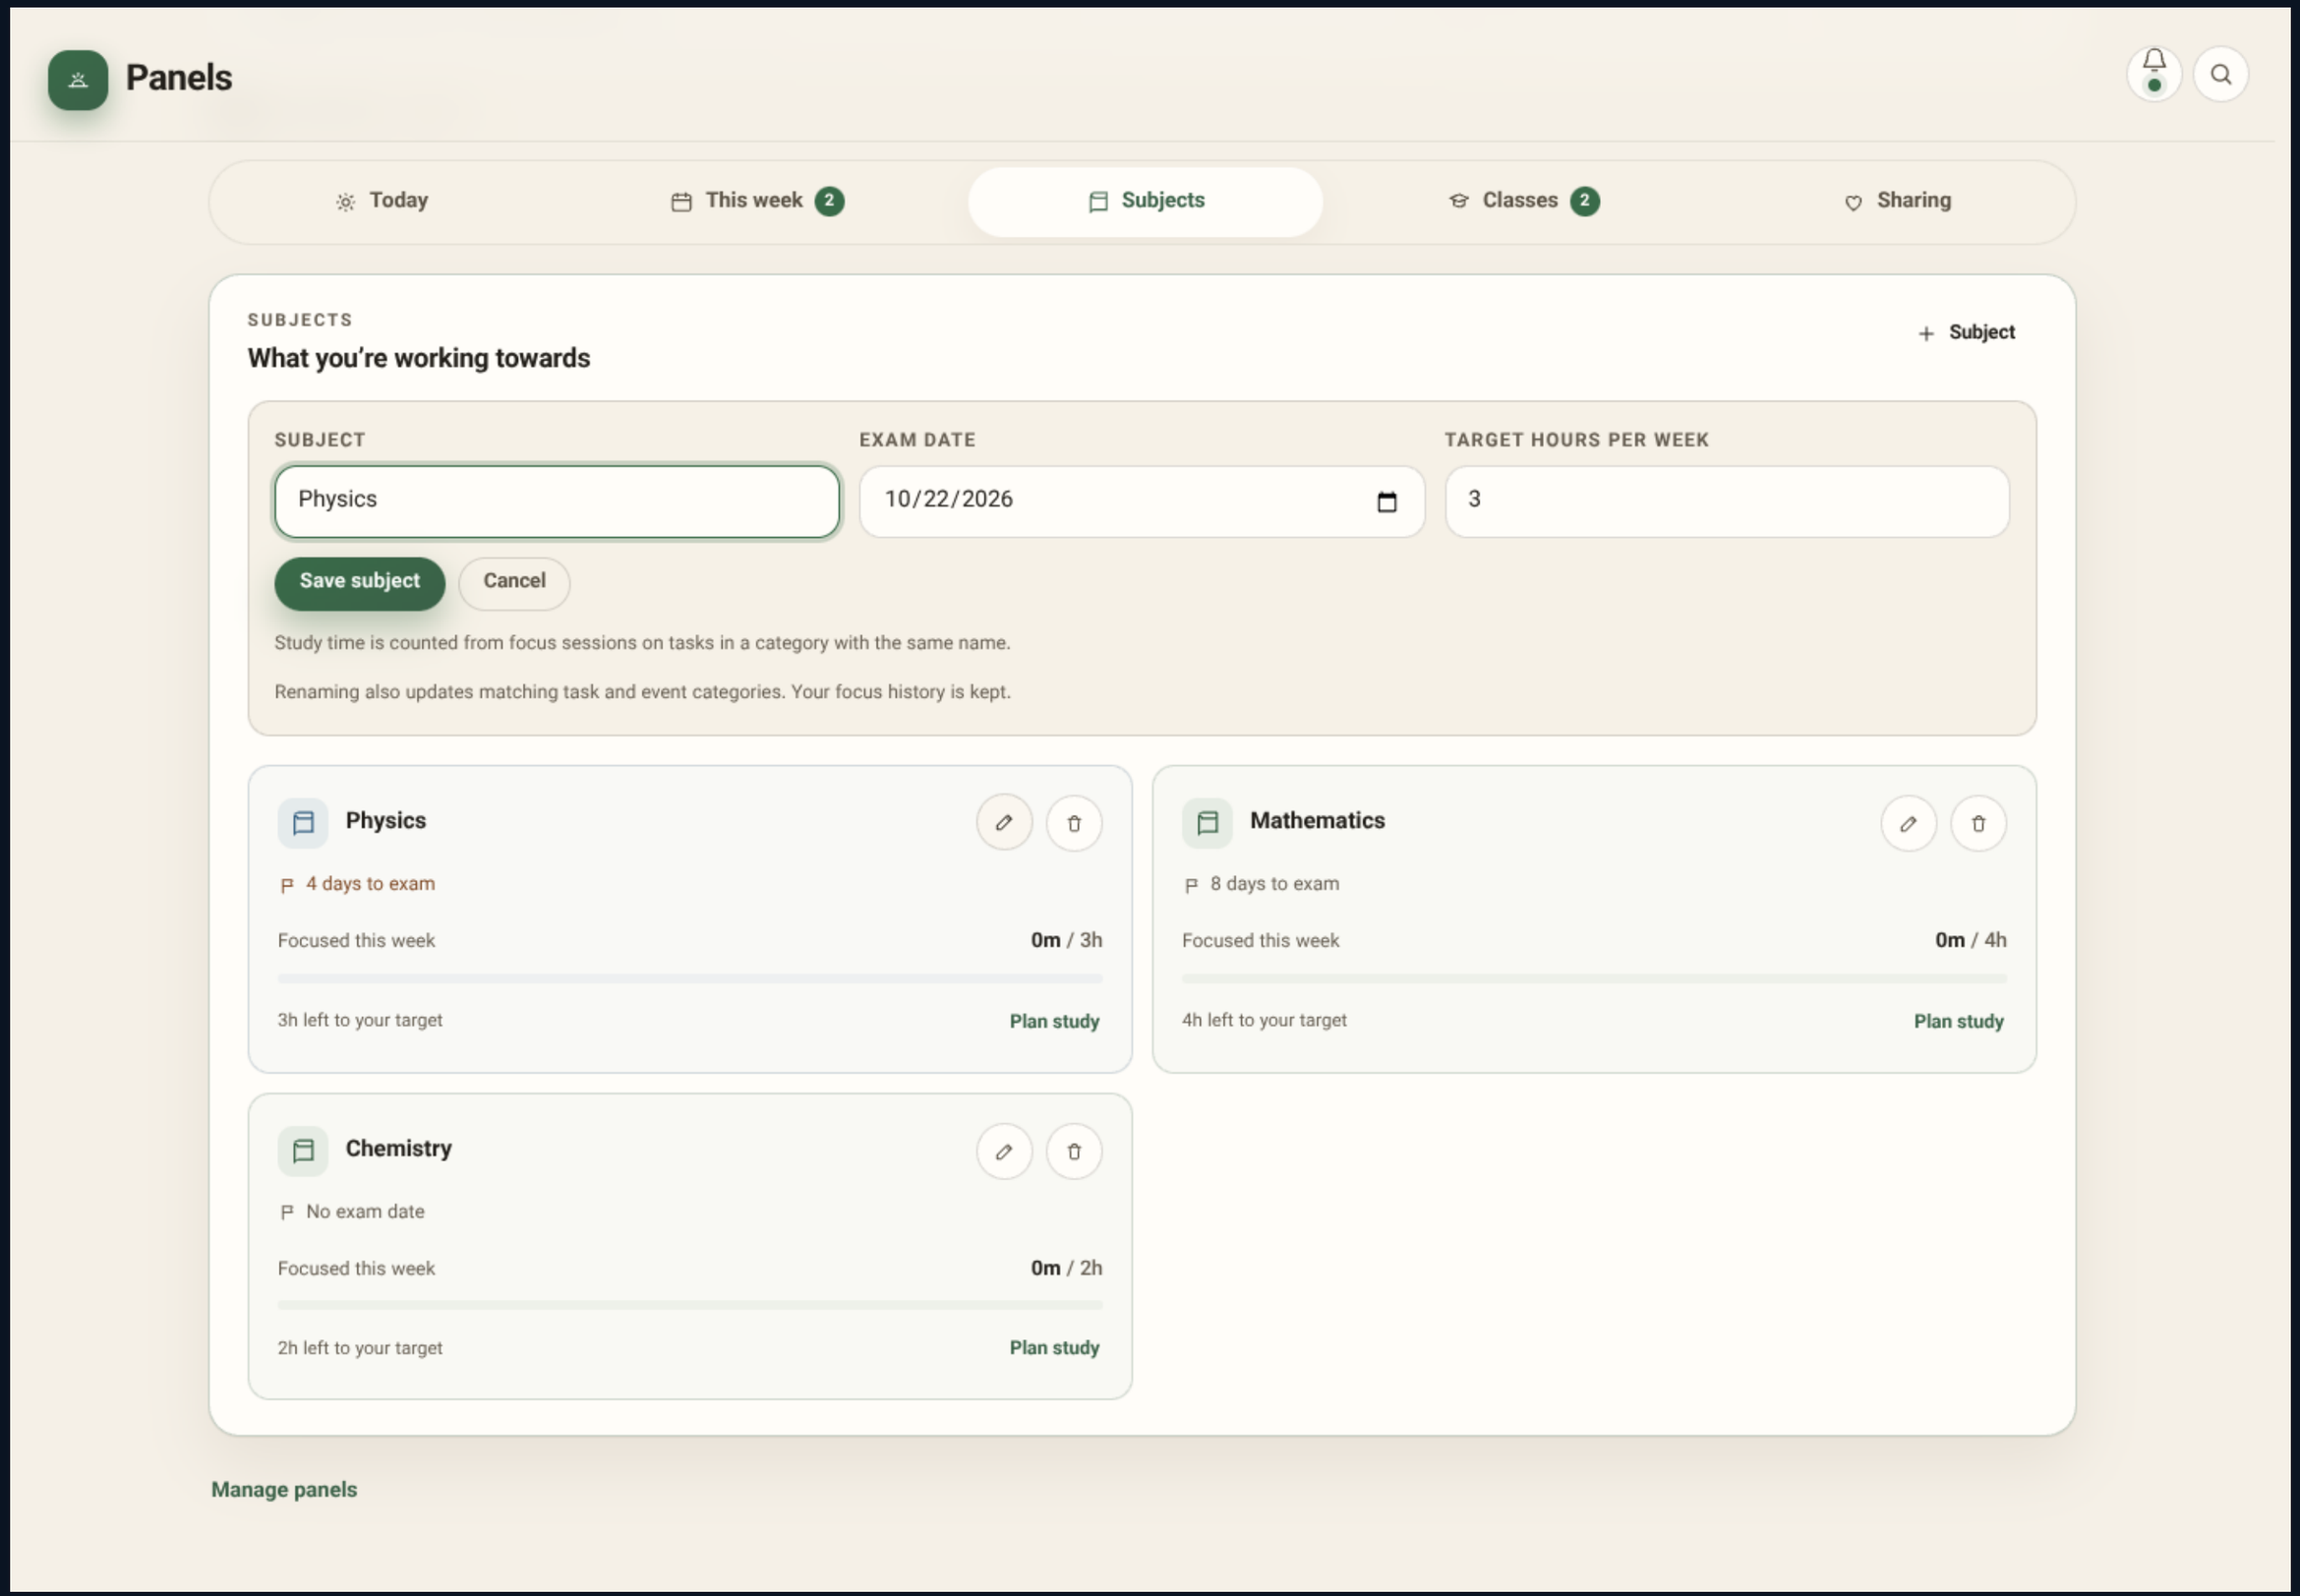

Student starts focus, studies and ends the session. Logged minutes feed subject and weekly progress.

Subjects, exam dates and targets

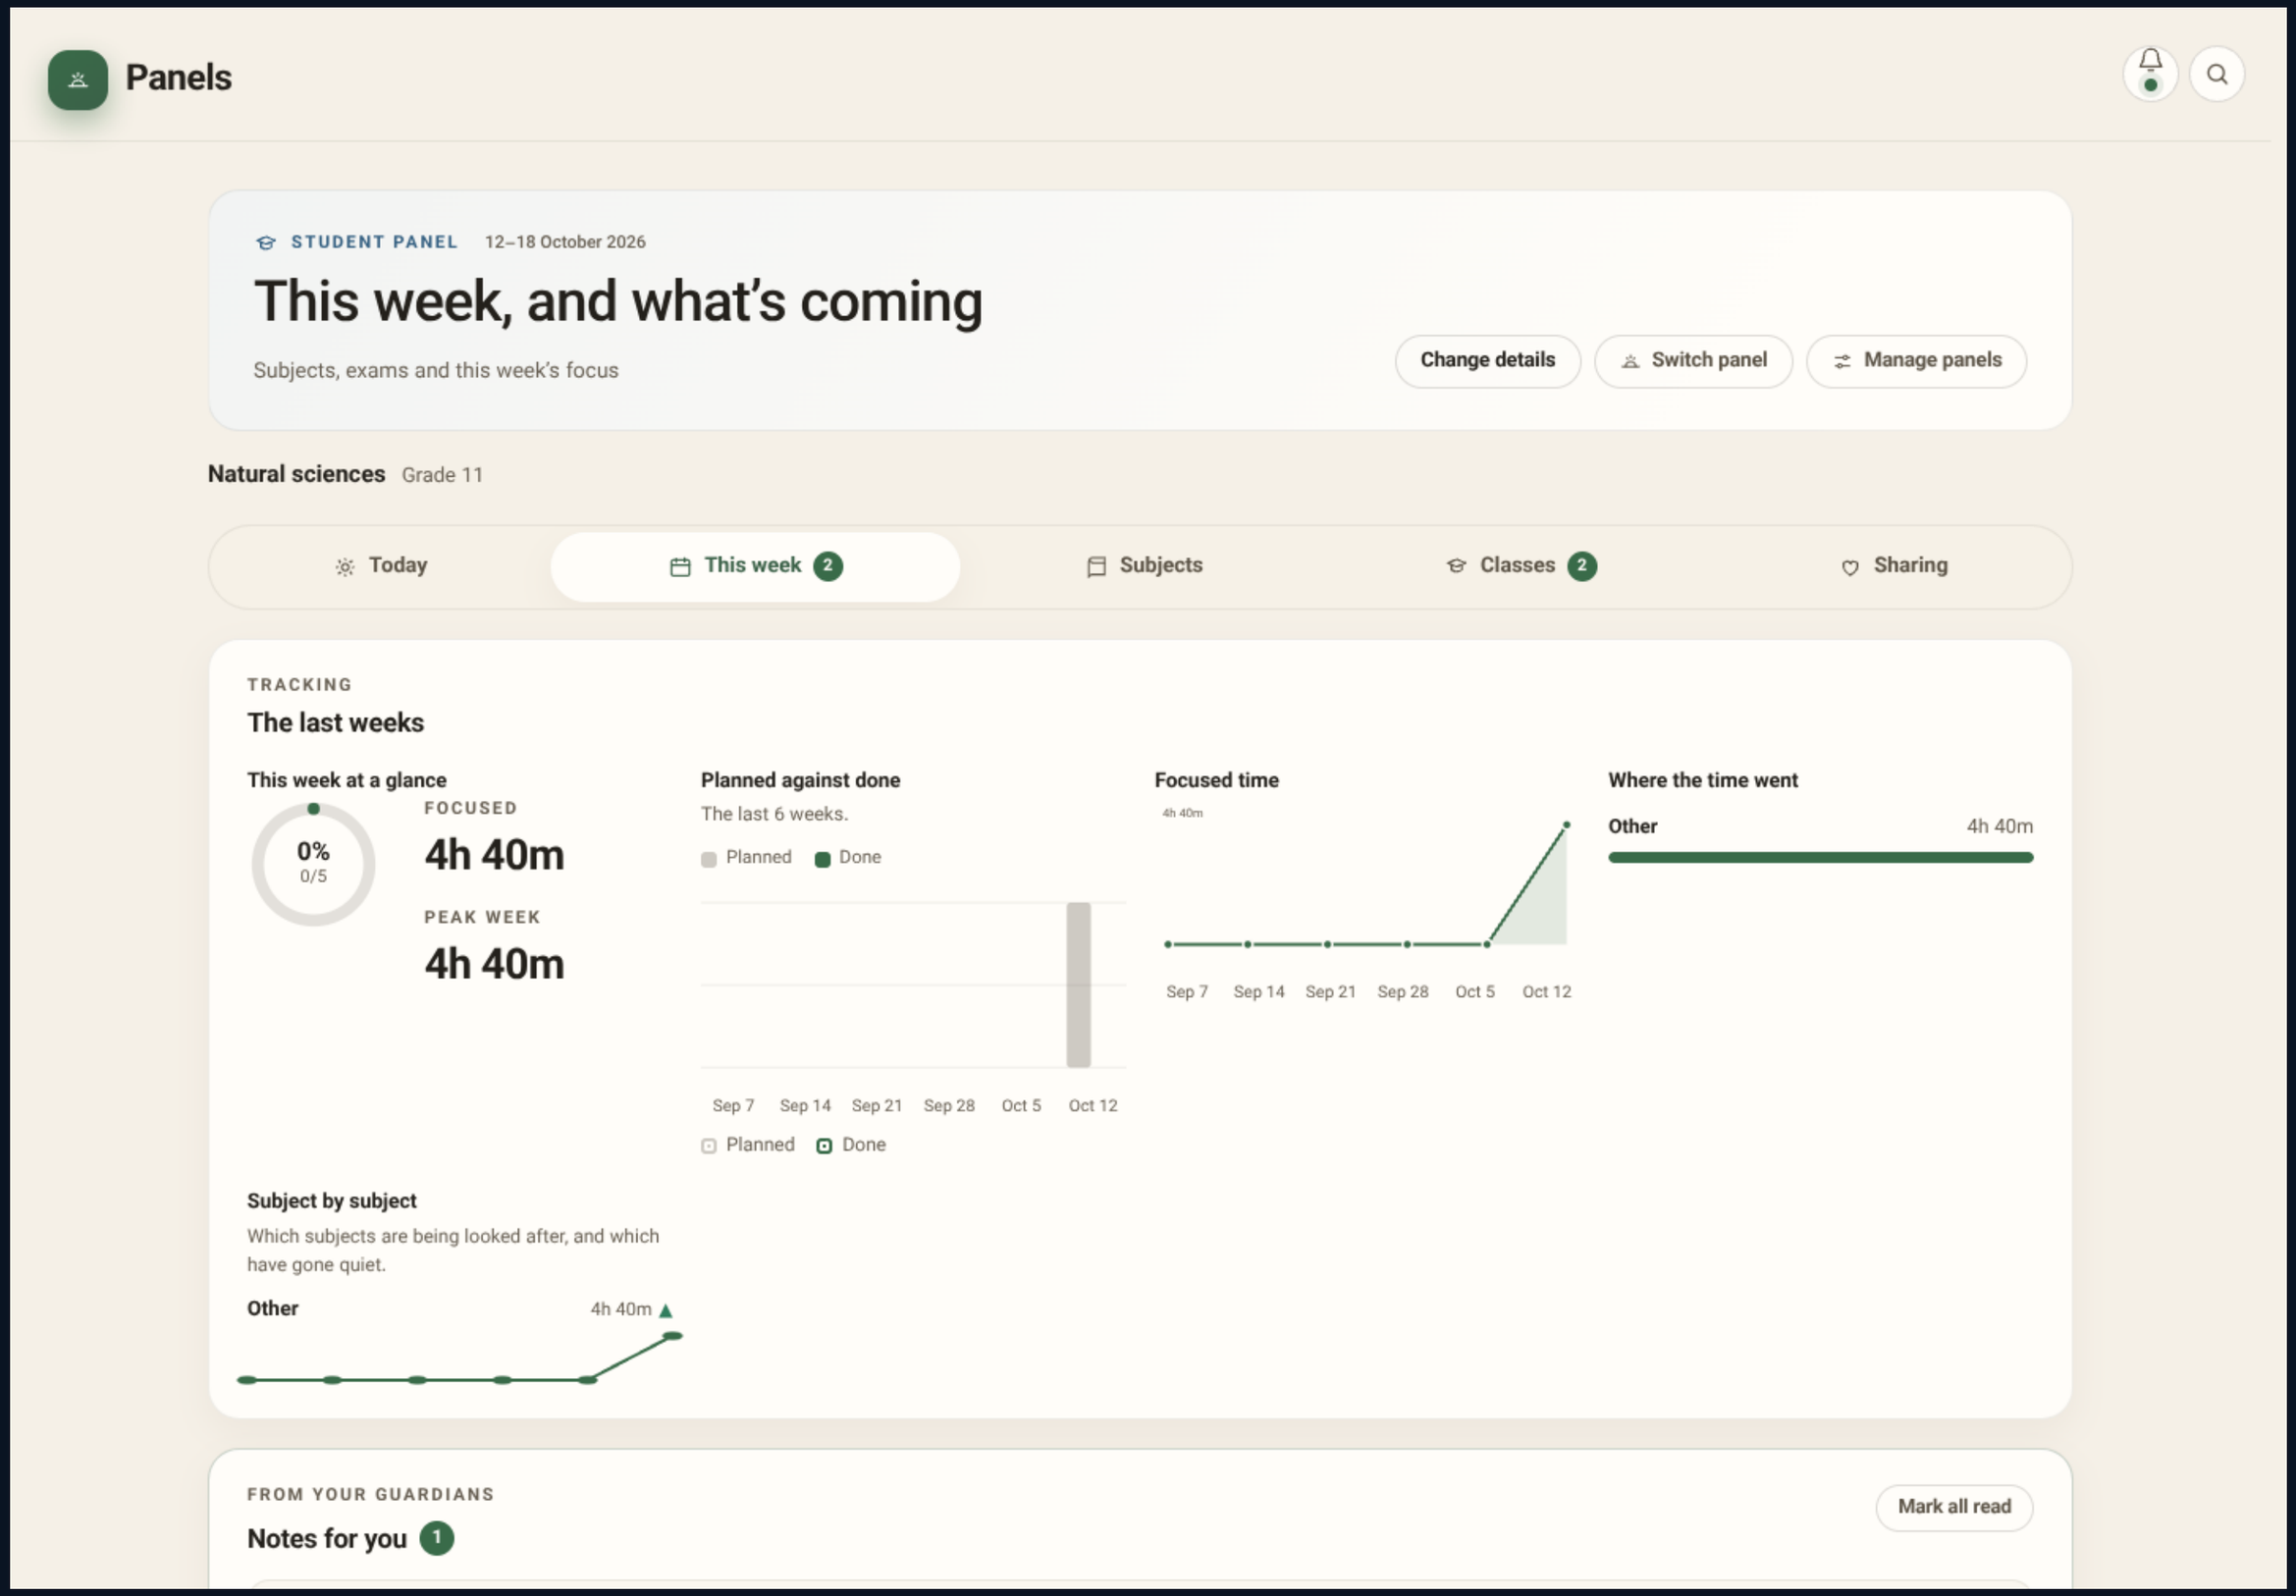

Track study time by subject, set weekly targets and exam dates. Rename without losing attribution; remove trackers without deleting tasks.

Edit a subject

Subject name, exam date and weekly focus target remain under the student's control.

Student: This week

Review weekly completion, focus and subject trends. Optional AI interprets the shared numbers.

Notes and suggested goals

Panels

Suggested goal · aiming for 2026-11-07

Build a steady physics routine

Small sessions are easier to sustain than a last-minute rush.

- Study for 25 minutes on three days
- Review mistakes after each session

From Dr. Morgan (advisor)

Take it on | Not now

Taking it on adds it to your goals. You can change it or drop it afterwards like any other.

Let's review the tricky questions together at our next meeting.

Dr. Morgan (advisor) · Week of 2026-10-12

AI

What should I do this week?

Ask

It reads this week's plan and what you have already finished — nothing else in your planner.

Nothing yet. Ask, and it answers from this week alone.

THIS WEEK

Explain a significant change

Write a headline about what changed. The latest headline is included with your weekly results; your reason stays private in this planner.

WHAT CHANGED

Moved the history essay to Thursday

WHY

Two deadlines landed on the same day.

Private to you; only the headline above is shared.

A guardian's note is a conversation; a suggested goal is accepted or declined by the student.

Assigned classes and homework

CLASSES

Lessons from your guardians 1

PHYSICS — To do

Understanding waves

Watch the lesson, then write down two questions to discuss.

Open video lesson — This video link opens on its video site.

Mark complete

Video is hosted by the linked service; Planner stores only this link.

HOMEWORK

Your assignments 1

PHYSICS — To do

Waves: practice worksheet

Solve questions 1–5. Show your working and send clear photos.

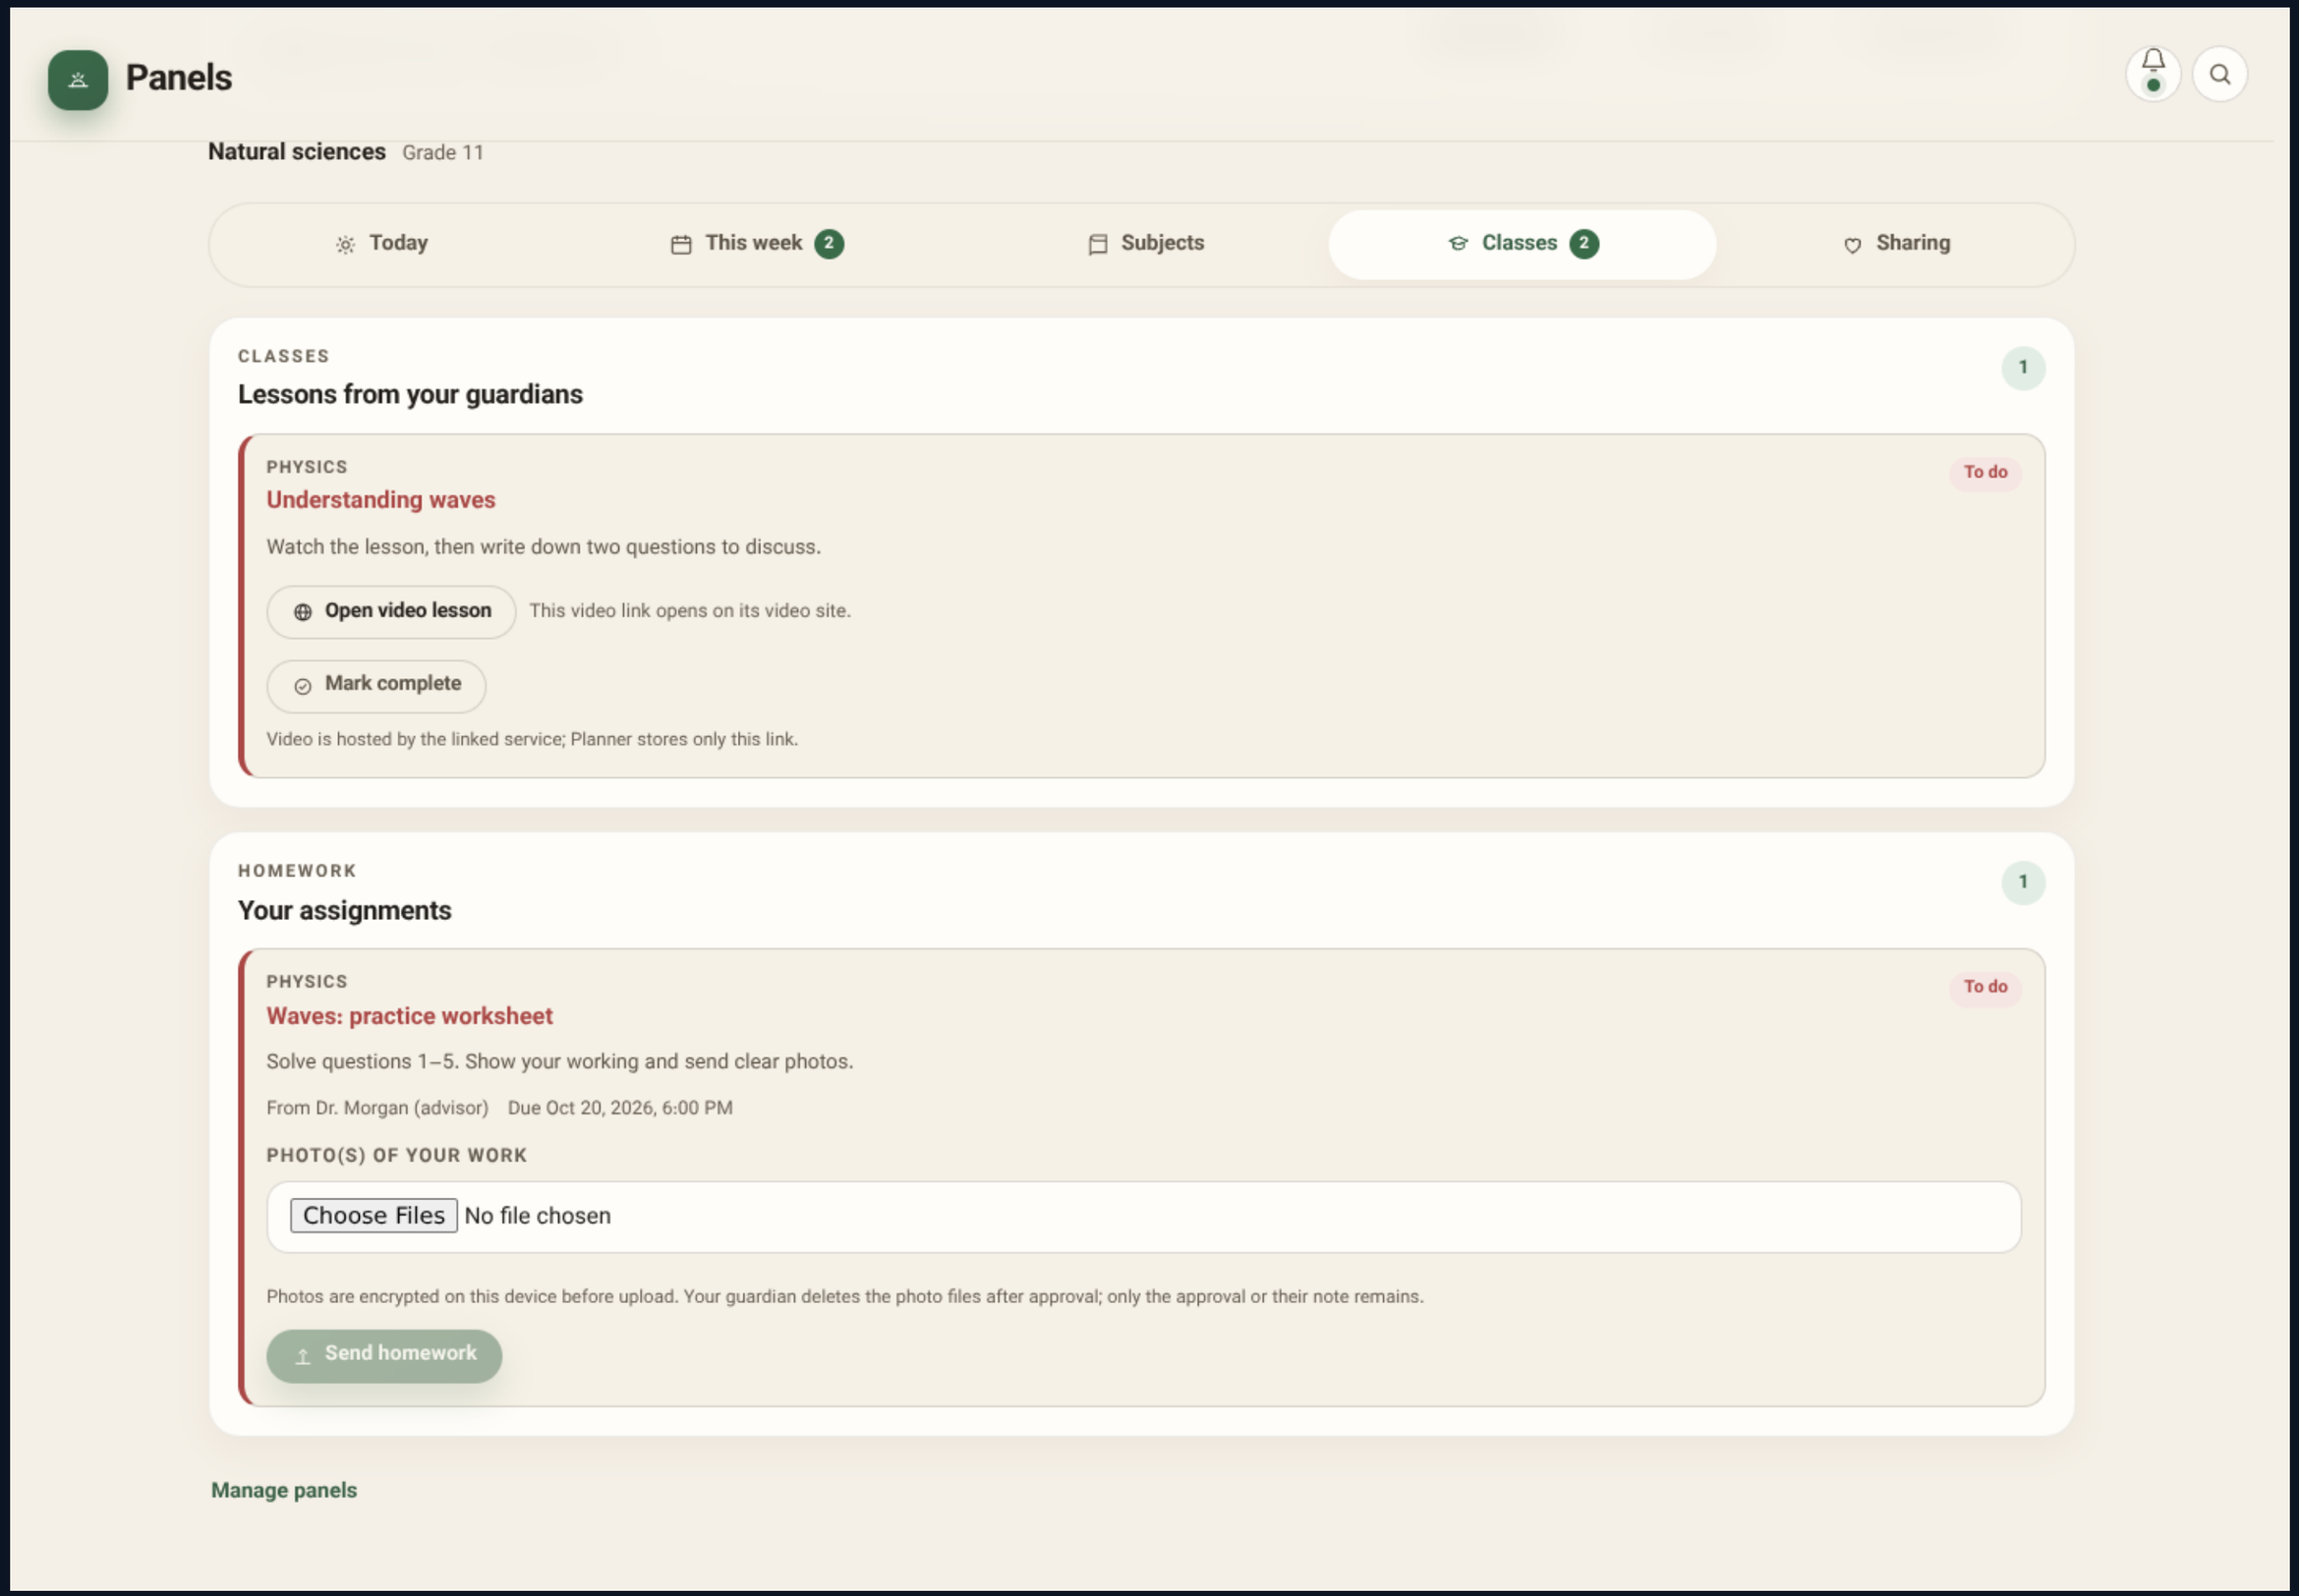

From Dr. Morgan (advisor) Due Oct 20, 2026, 6:00 PM

PHOTO(S) OF YOUR WORK

Choose Files No file chosen

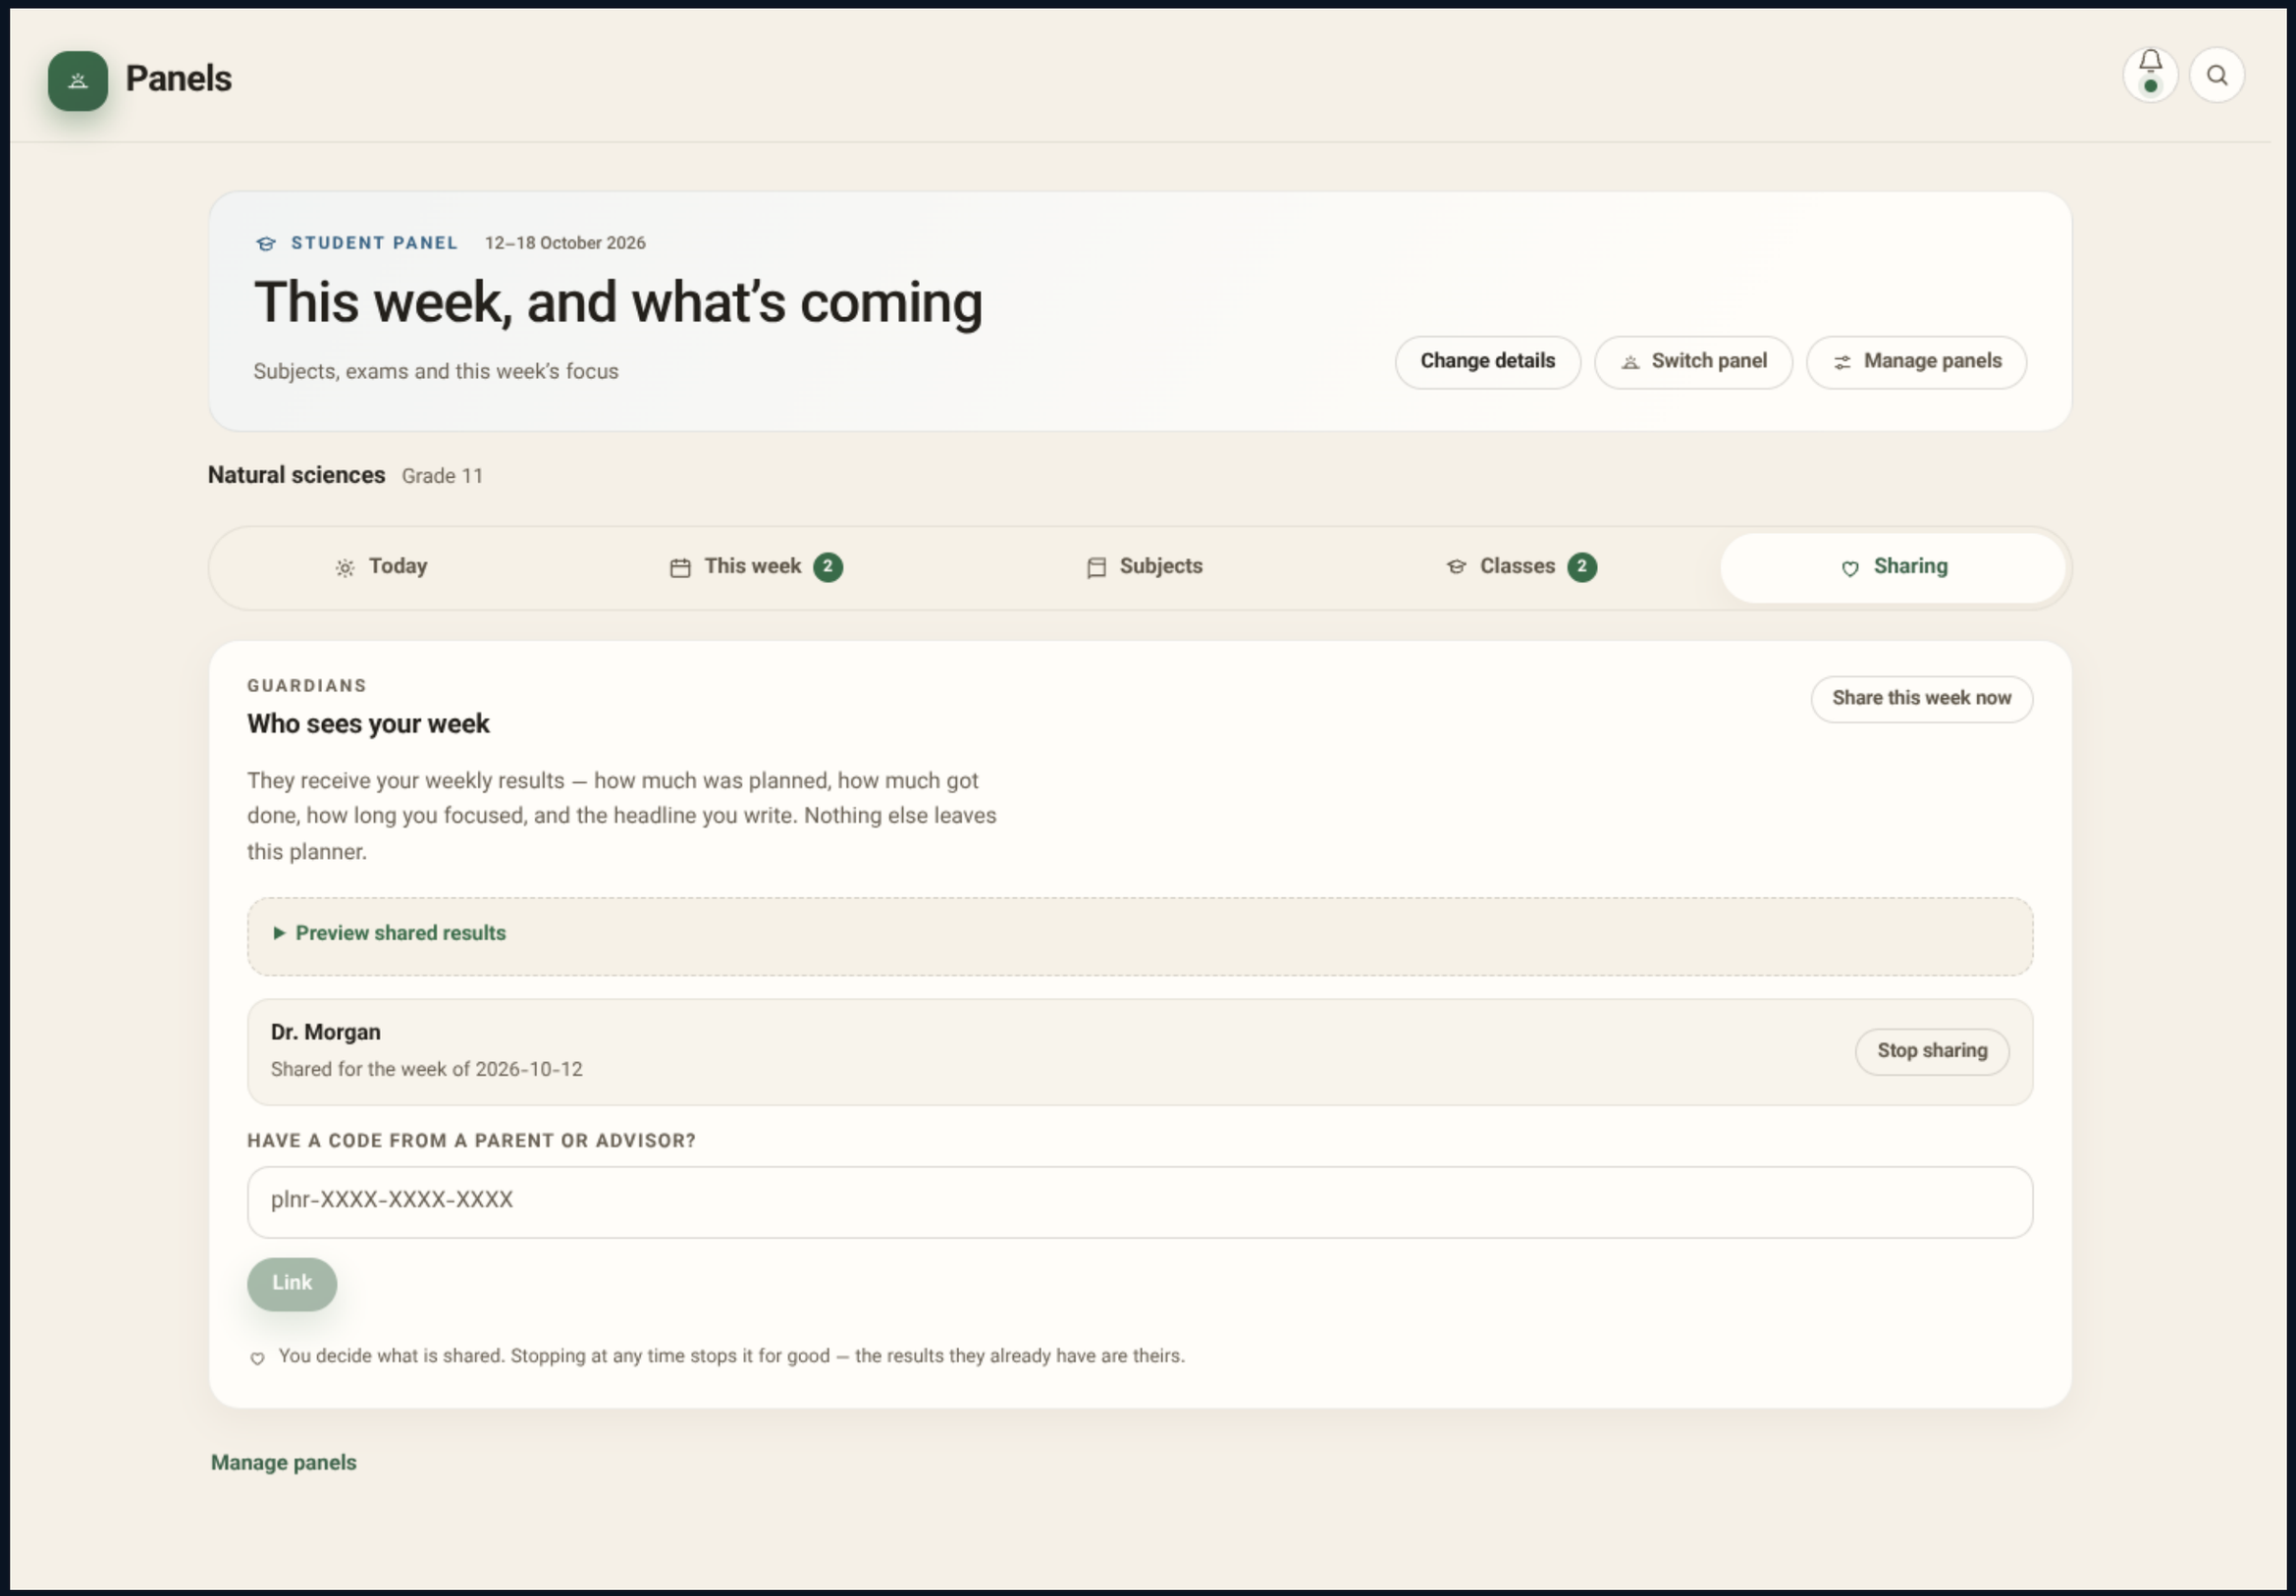

Classes are hosted video links with completion marks. Homework carries instructions and an optional deadline.

Submit homework photos

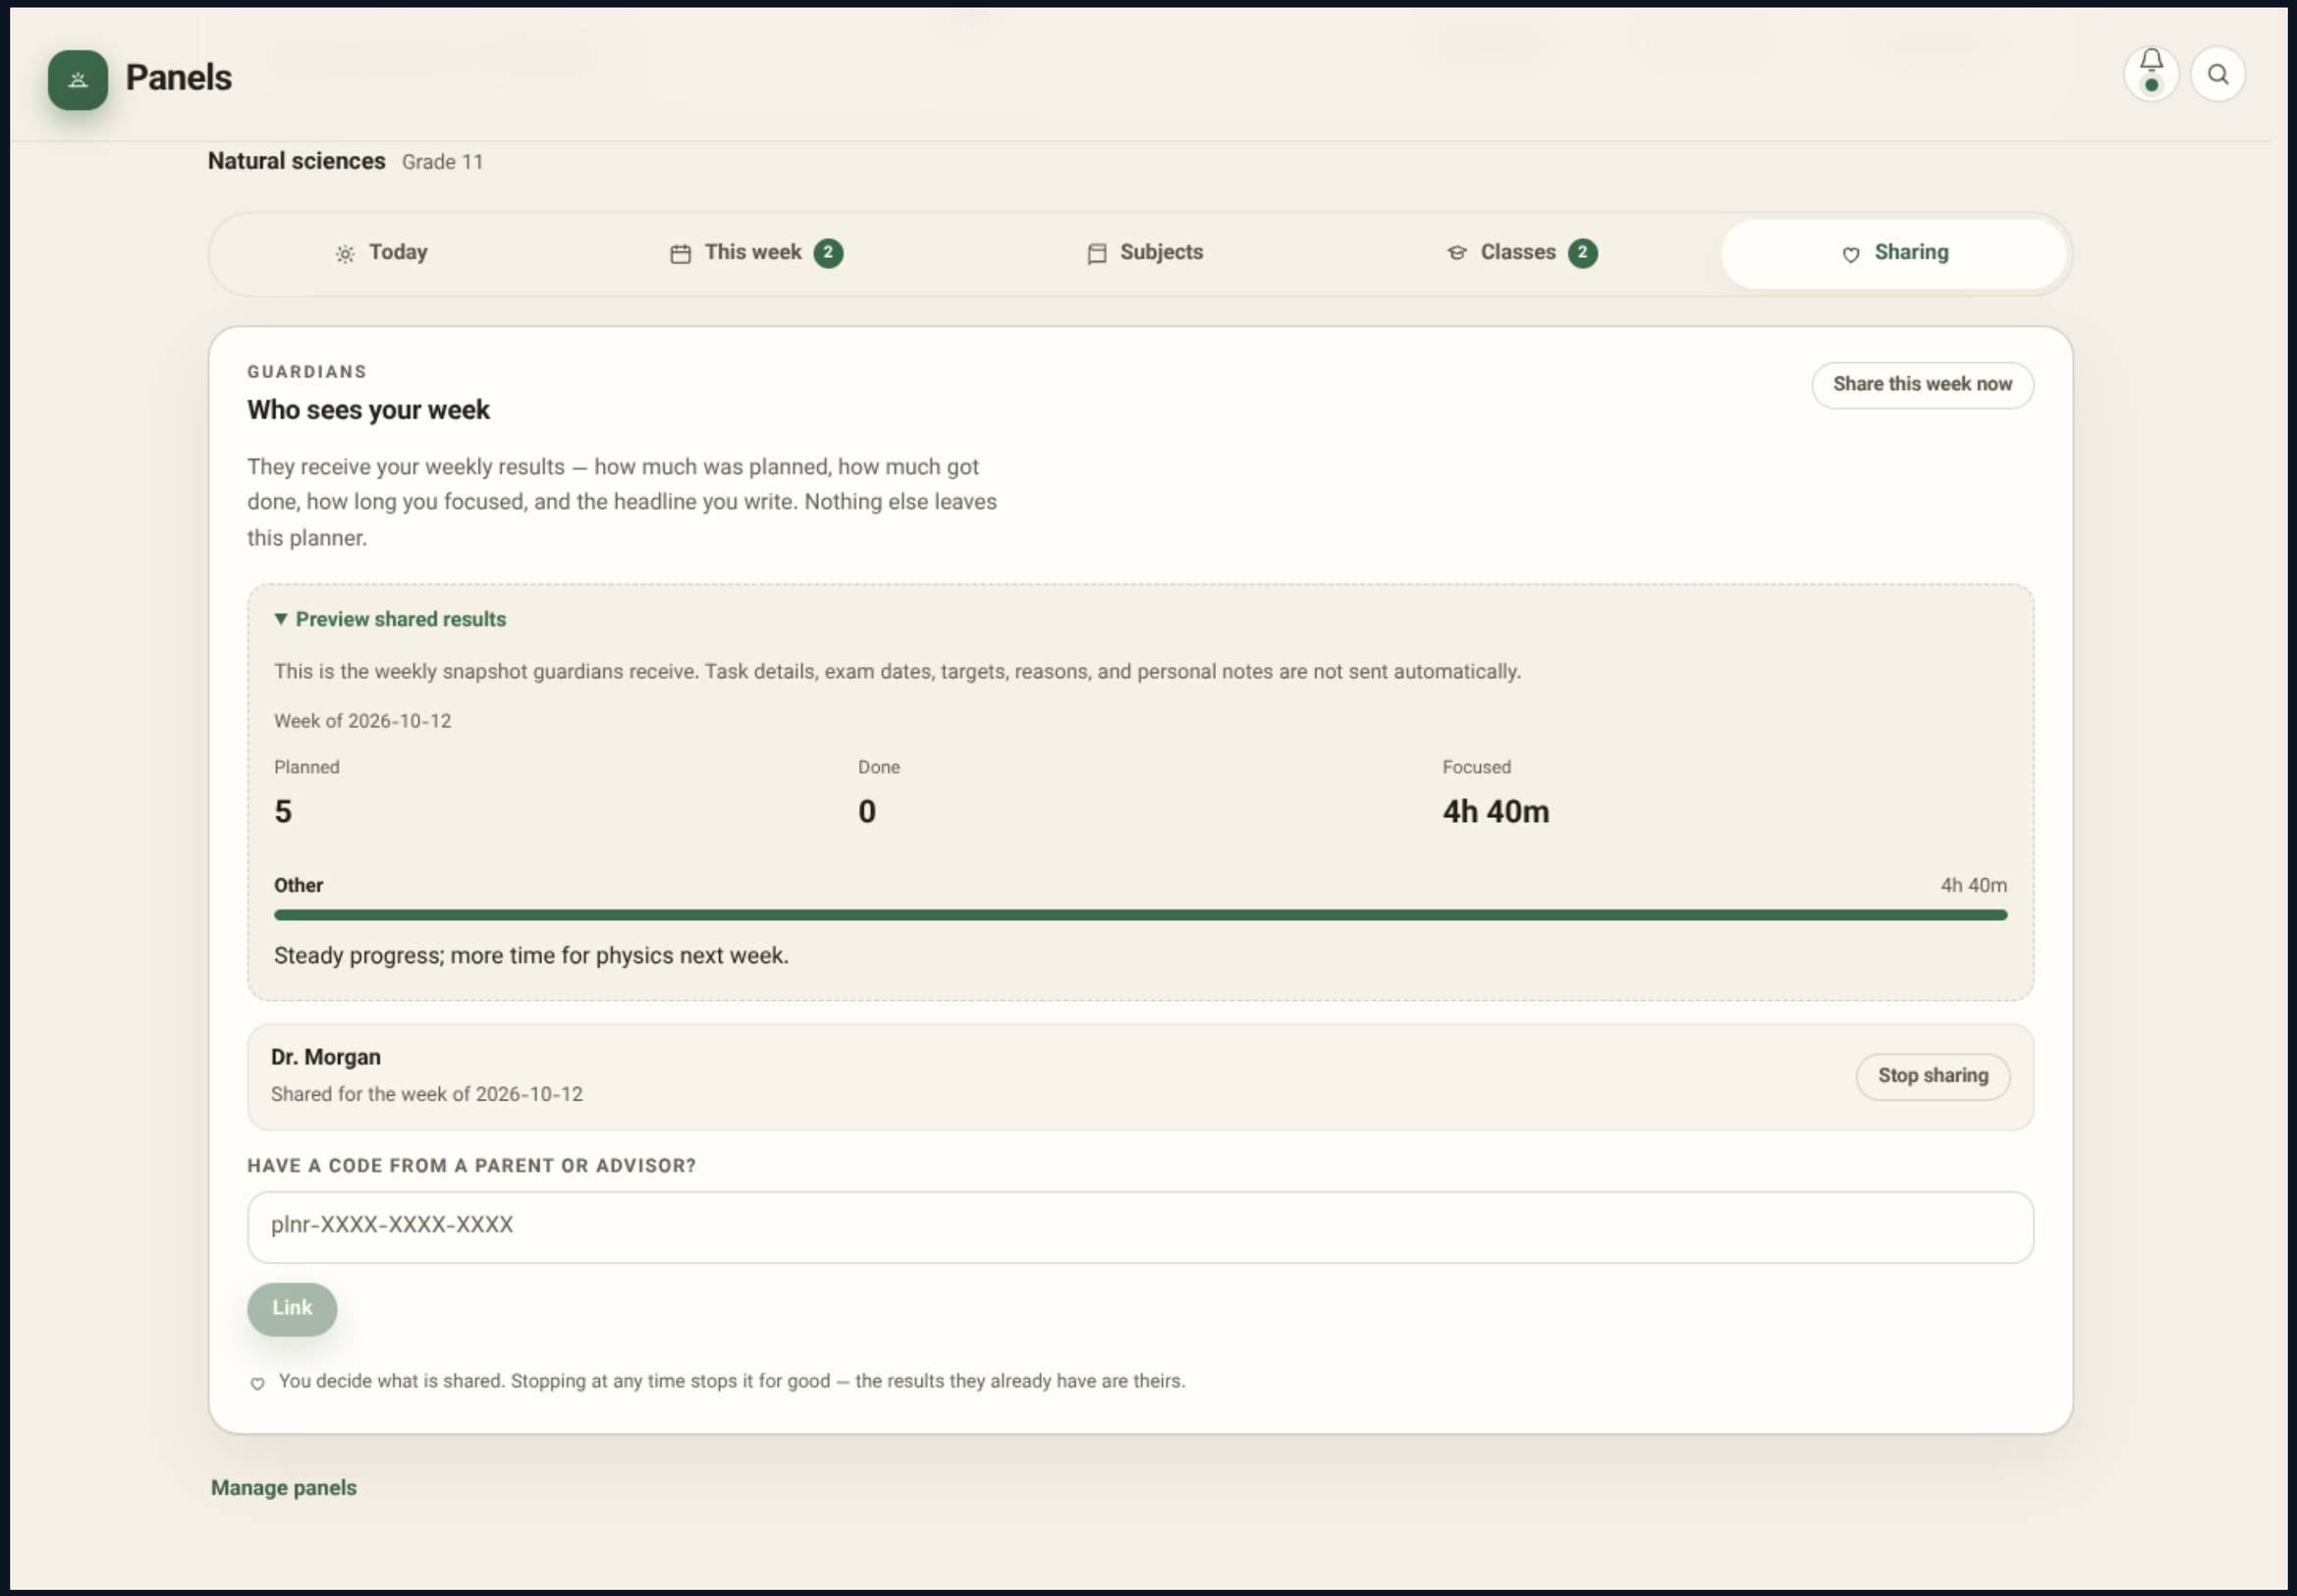

Choose one to three JPEG, PNG or WebP photos (8 MB each maximum). The app encrypts them before upload; guardian approval deletes hosted photos.

Sharing and guardian links

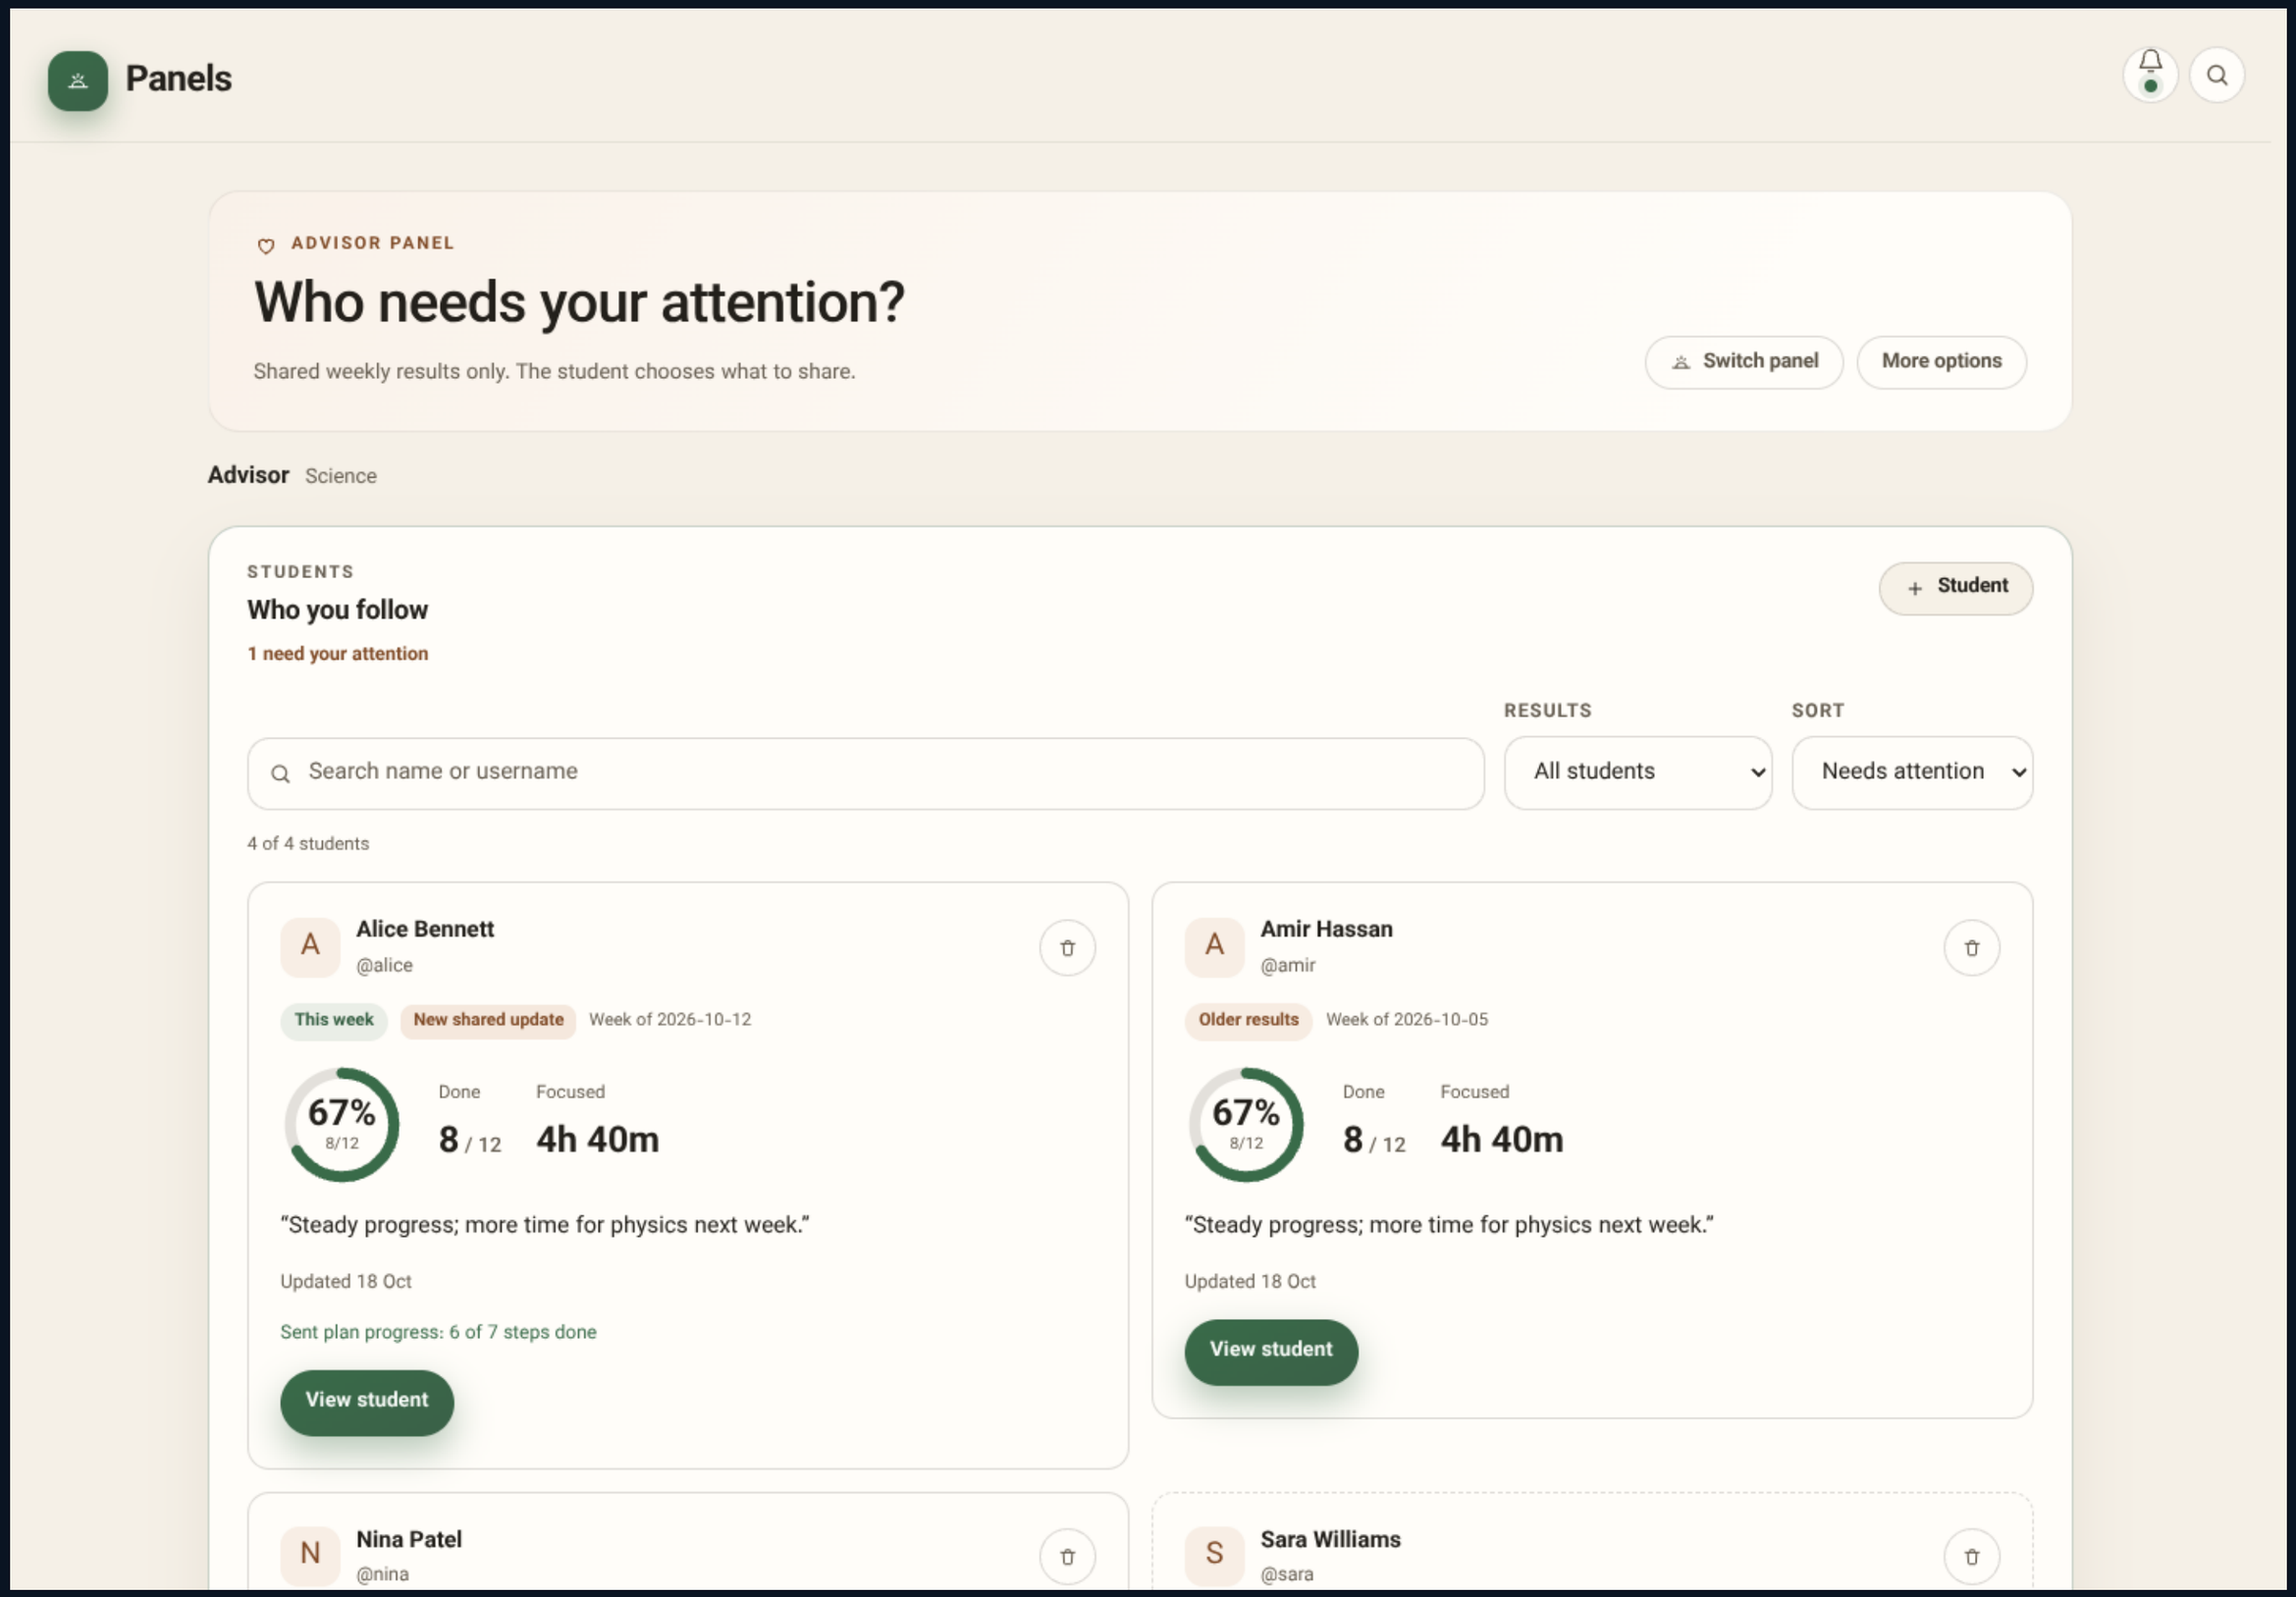

Review who receives results. Connecting accounts requires the configured server; this presentation uses local sample data.

Exactly what the guardian sees

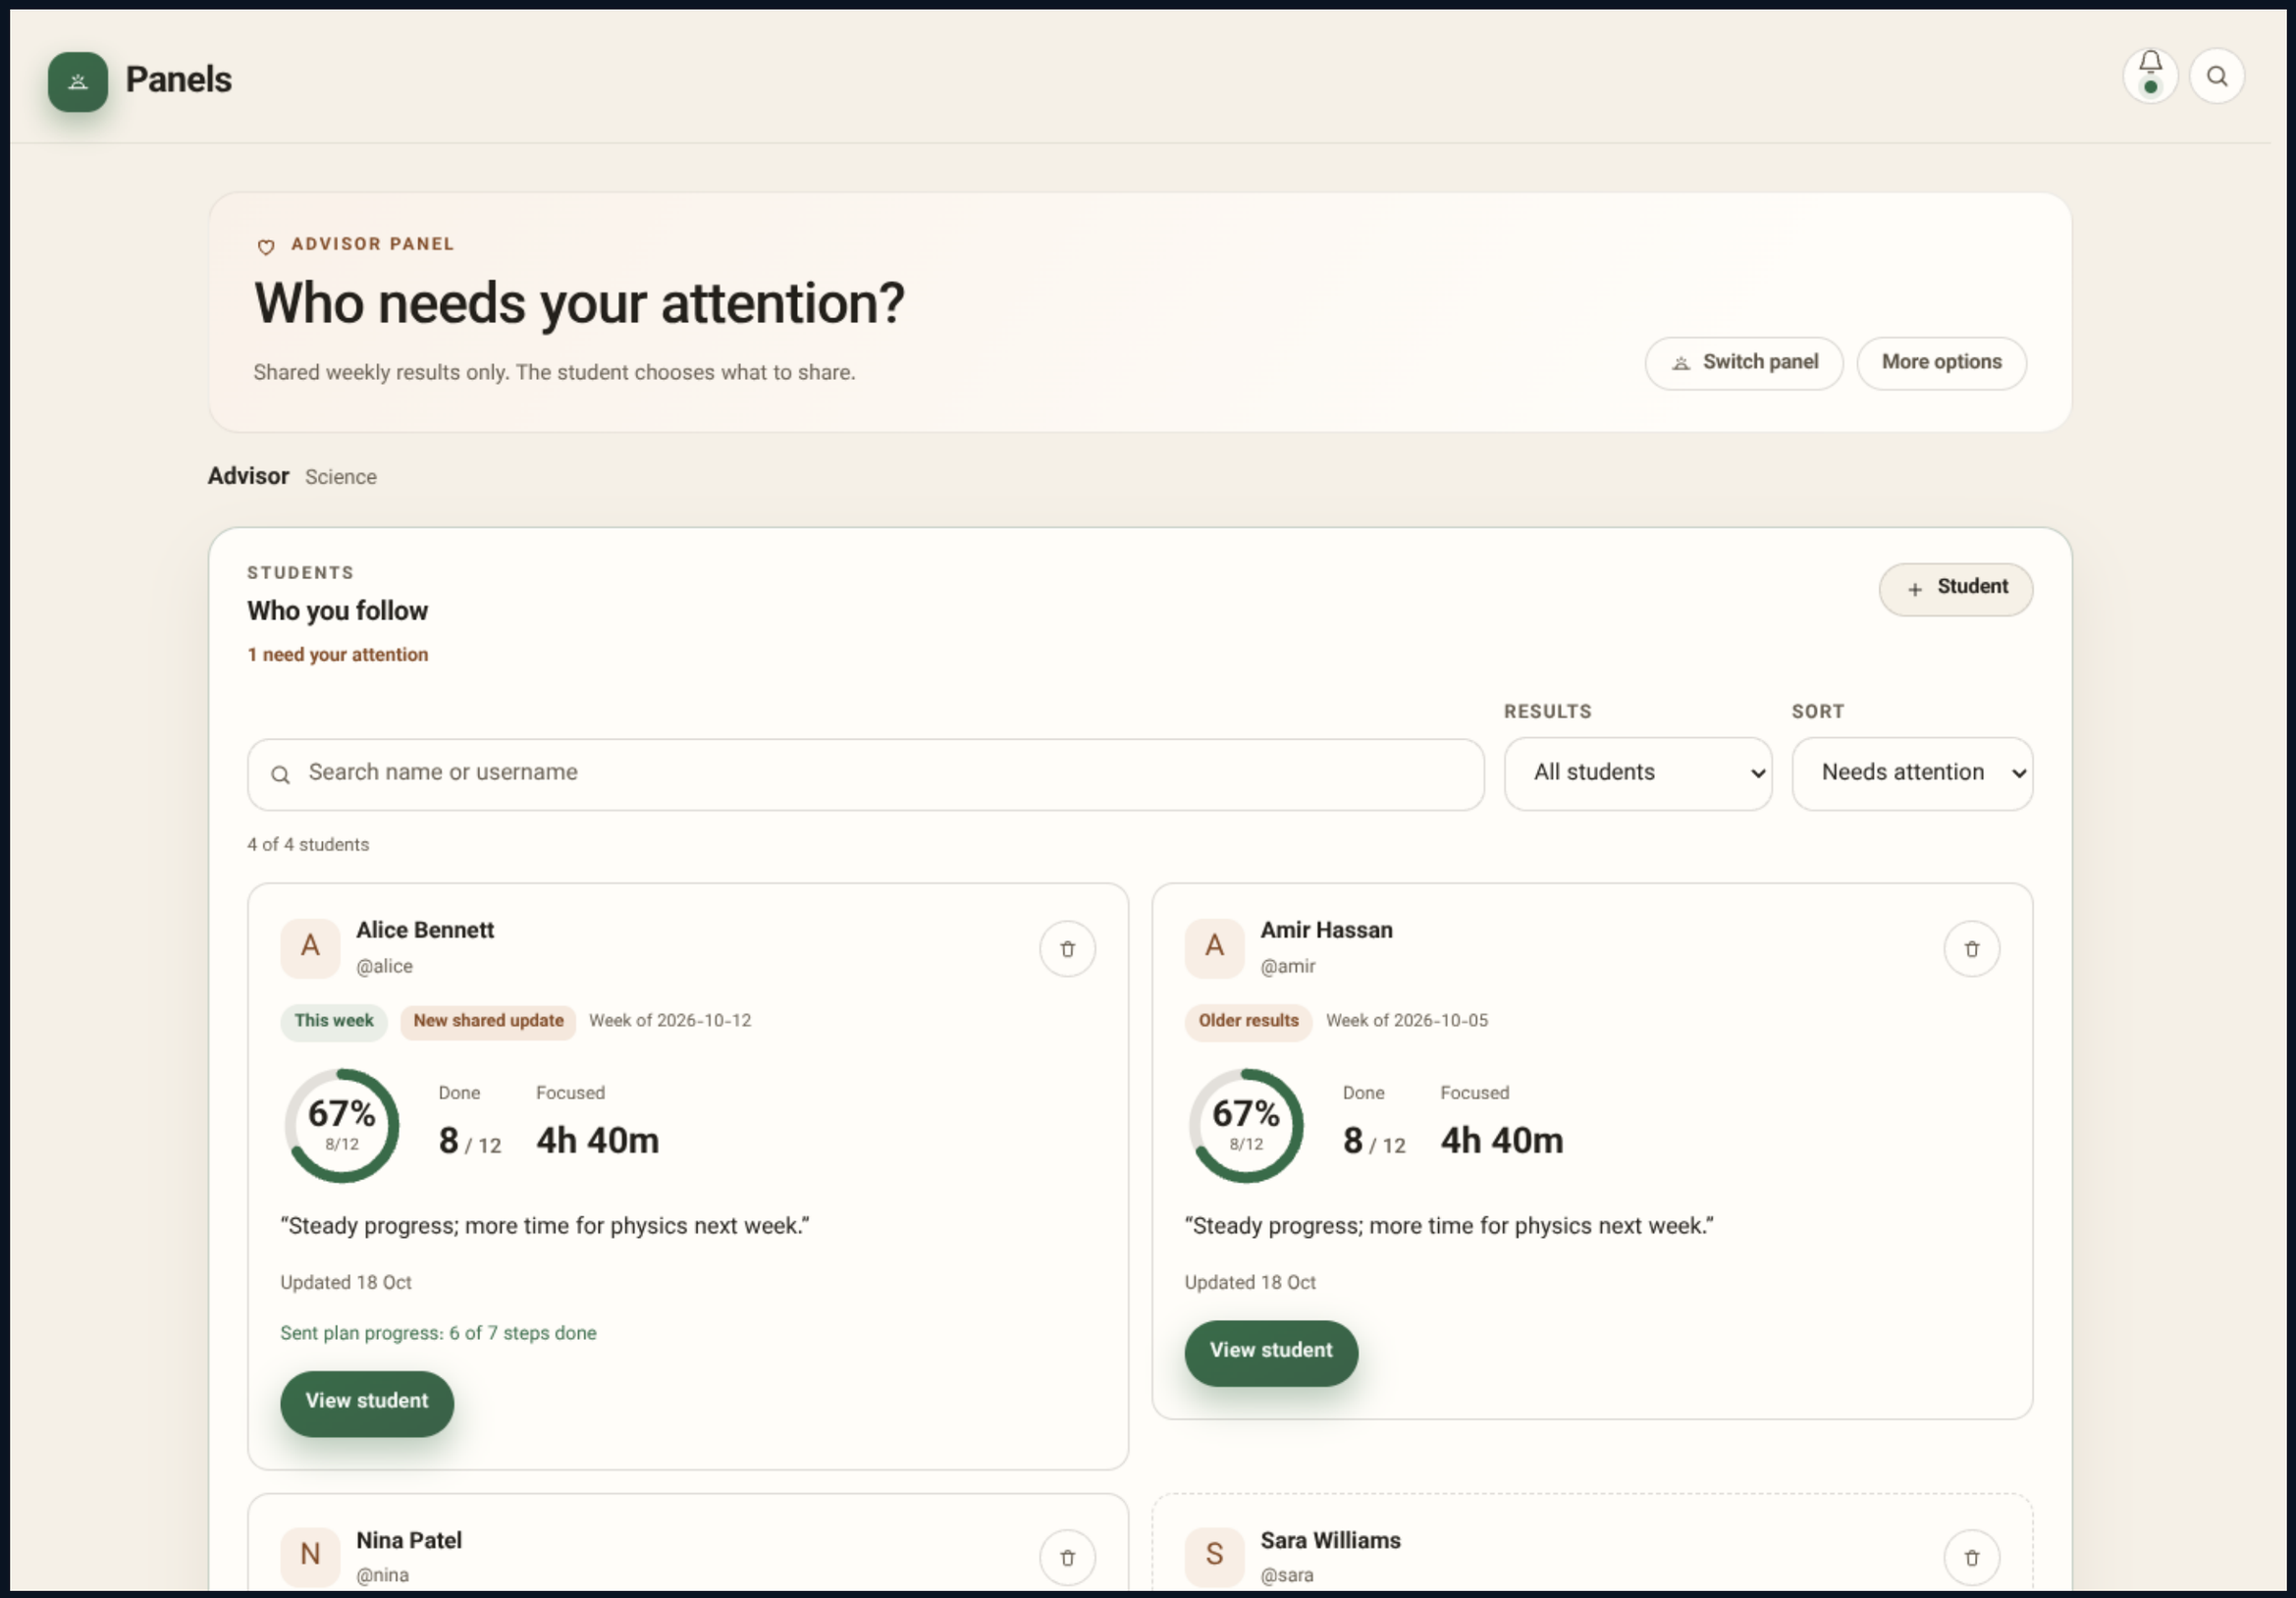

Weekly counts, focus, up to four subject totals and the chosen headline—not private task text, notes, exam dates, targets or detailed reasons.

Guardian: student roster

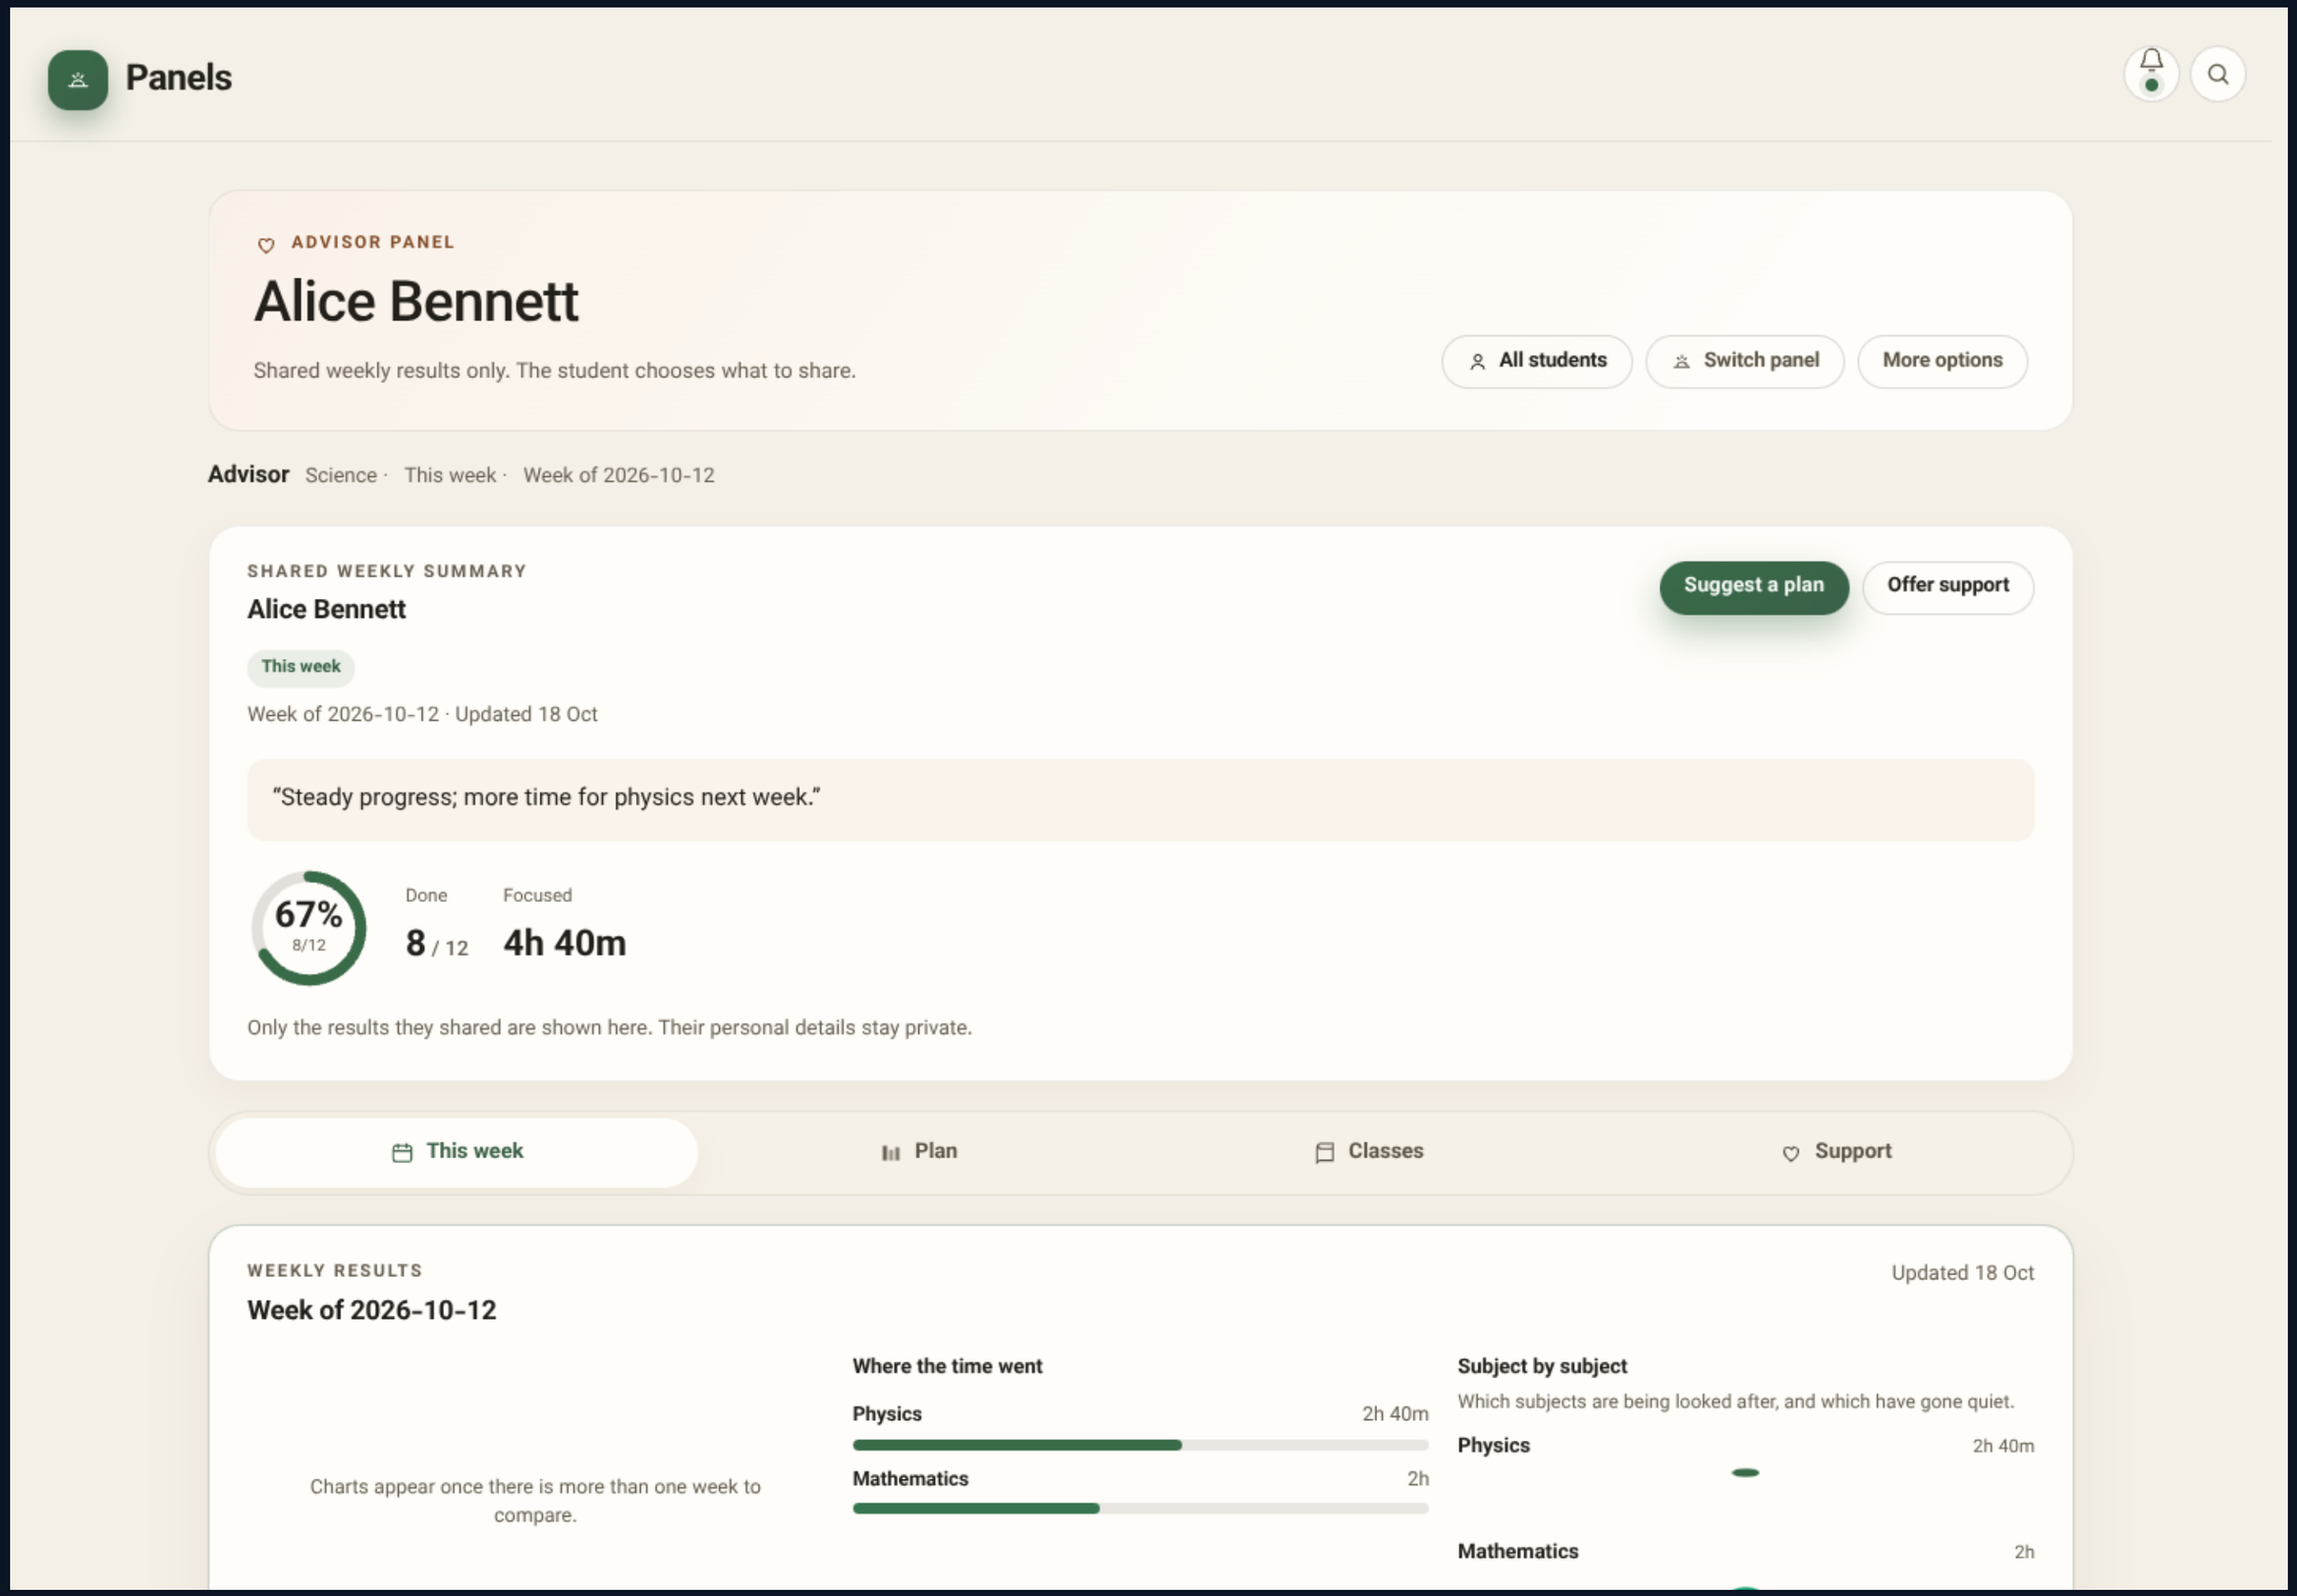

Search, filter freshness and sort students. Pending invitations and accepted links awaiting first results are different states.

Invite and connect

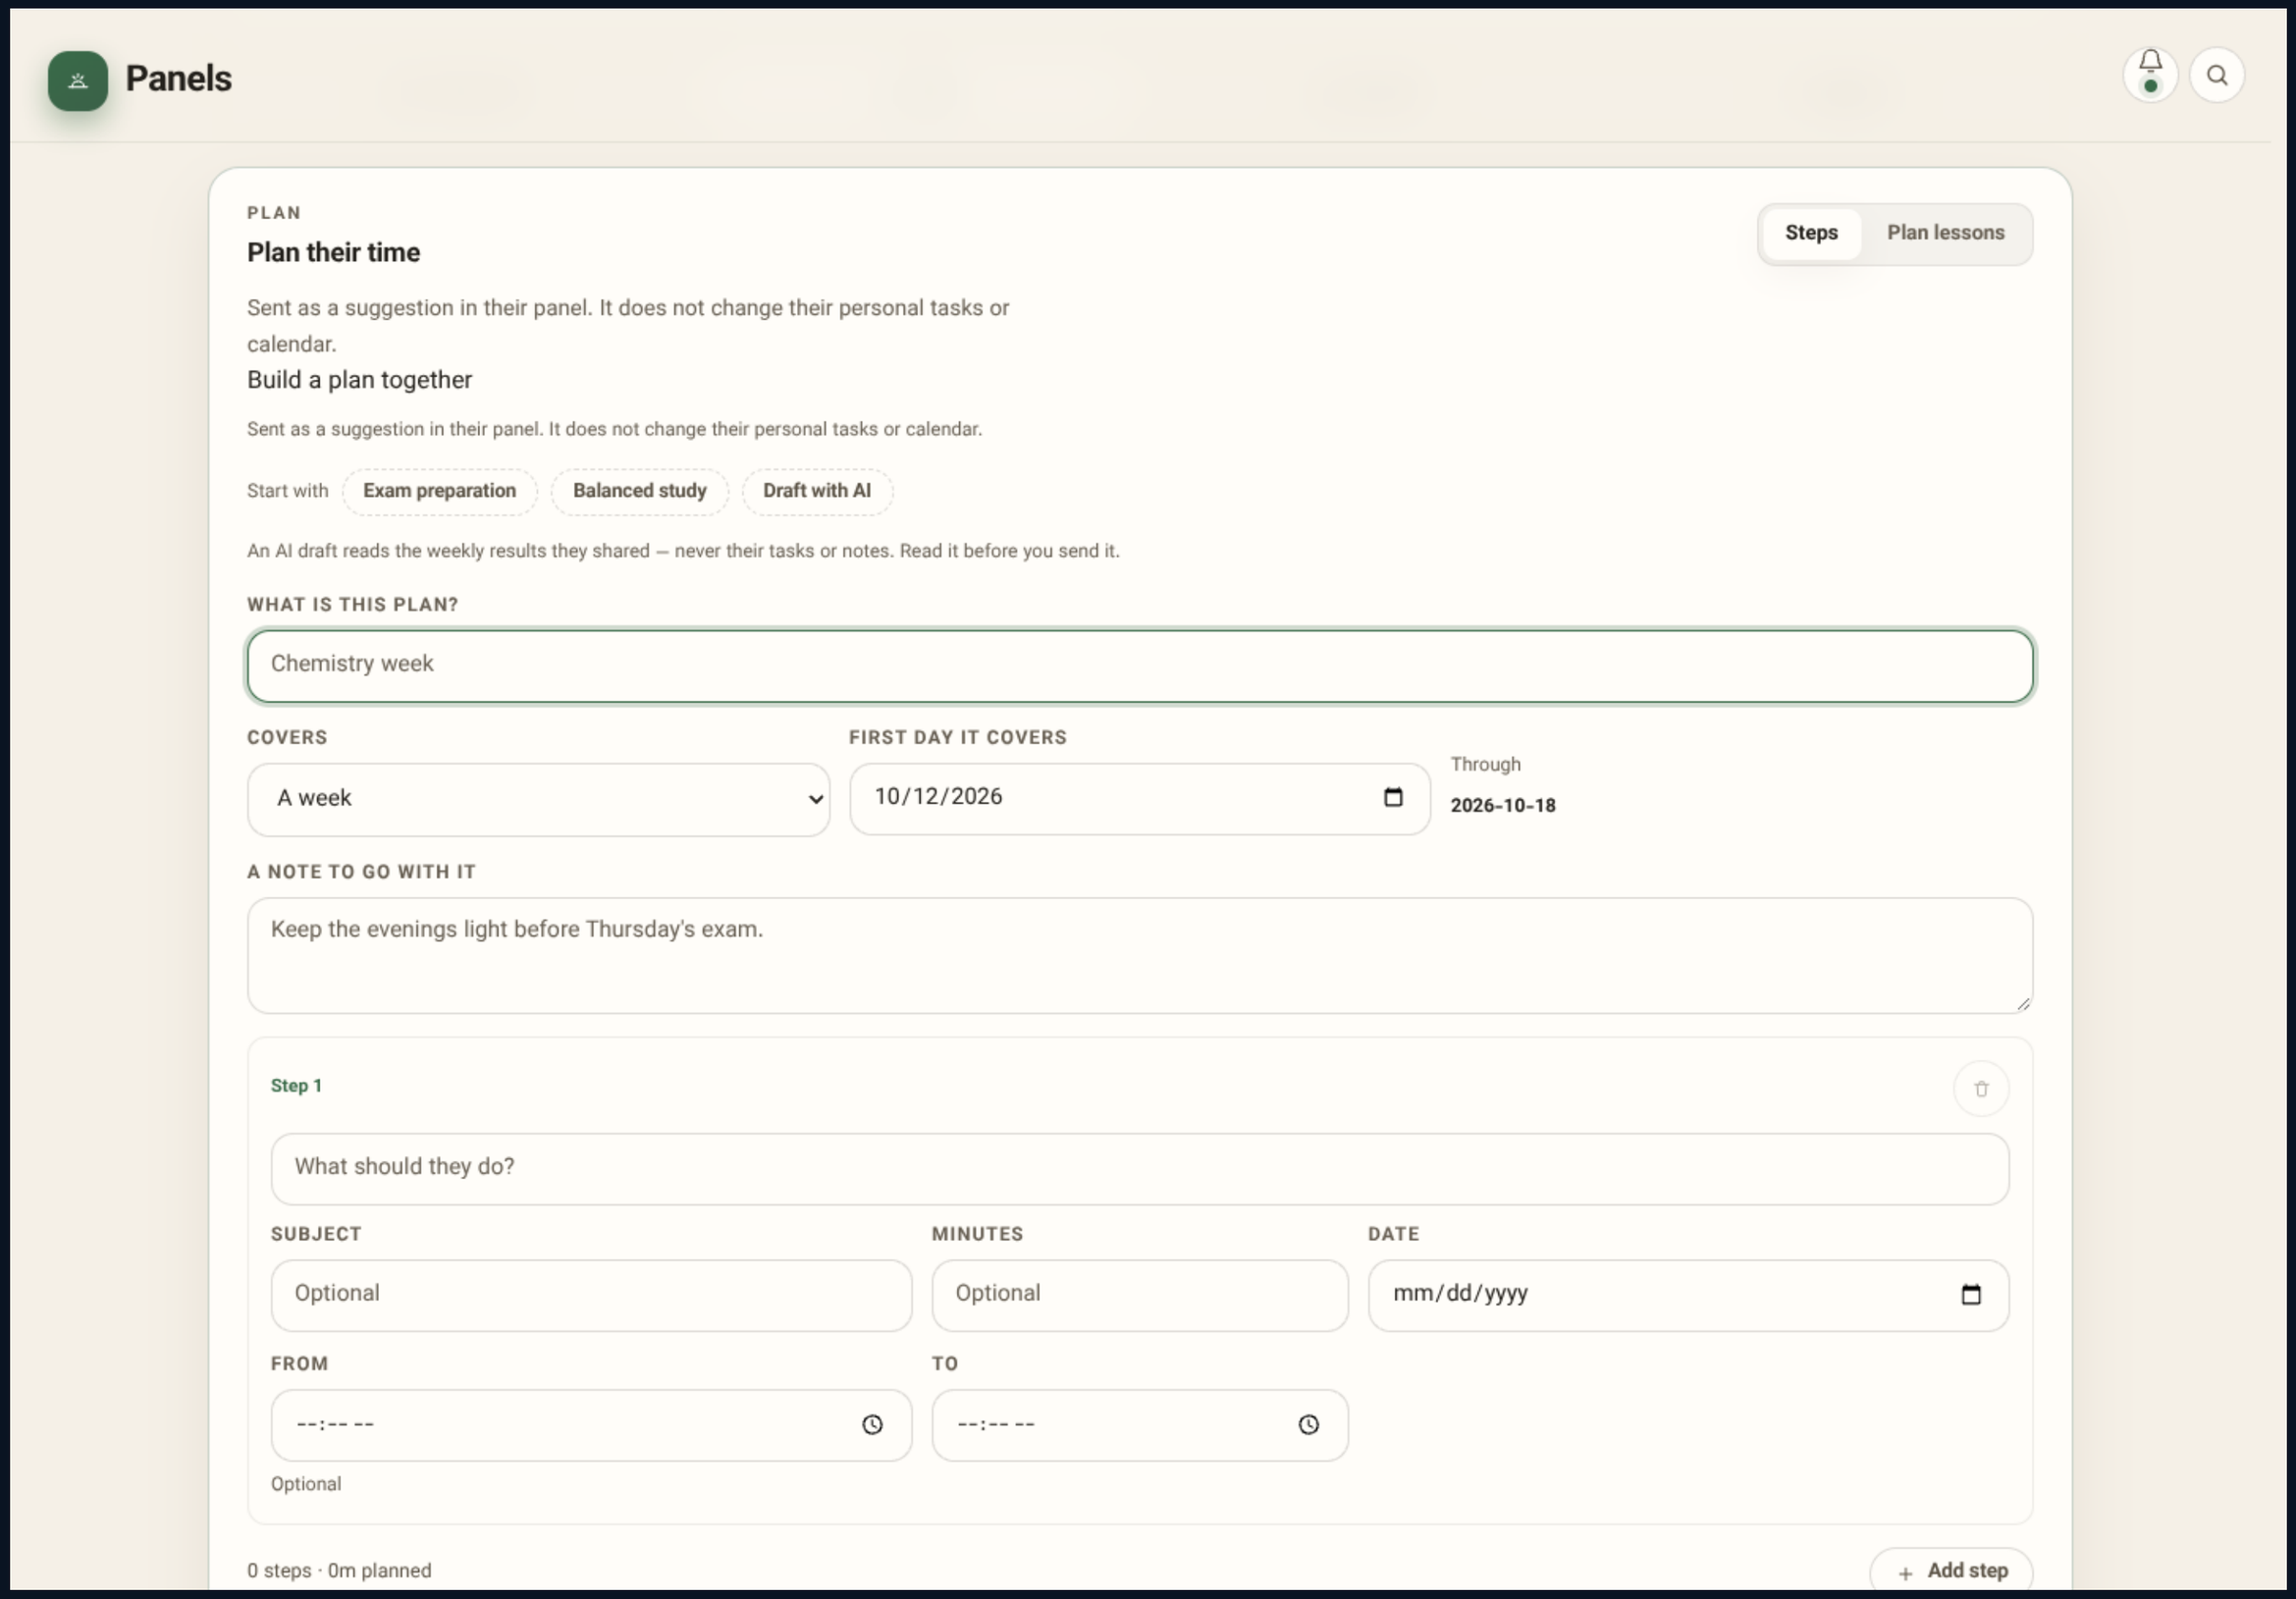

Invite by username, then share the code or QR link for the student to accept. Pending, linked and awaiting-first-results states stay distinct. This local demo does not create a live invitation.

Guardian: one student’s week

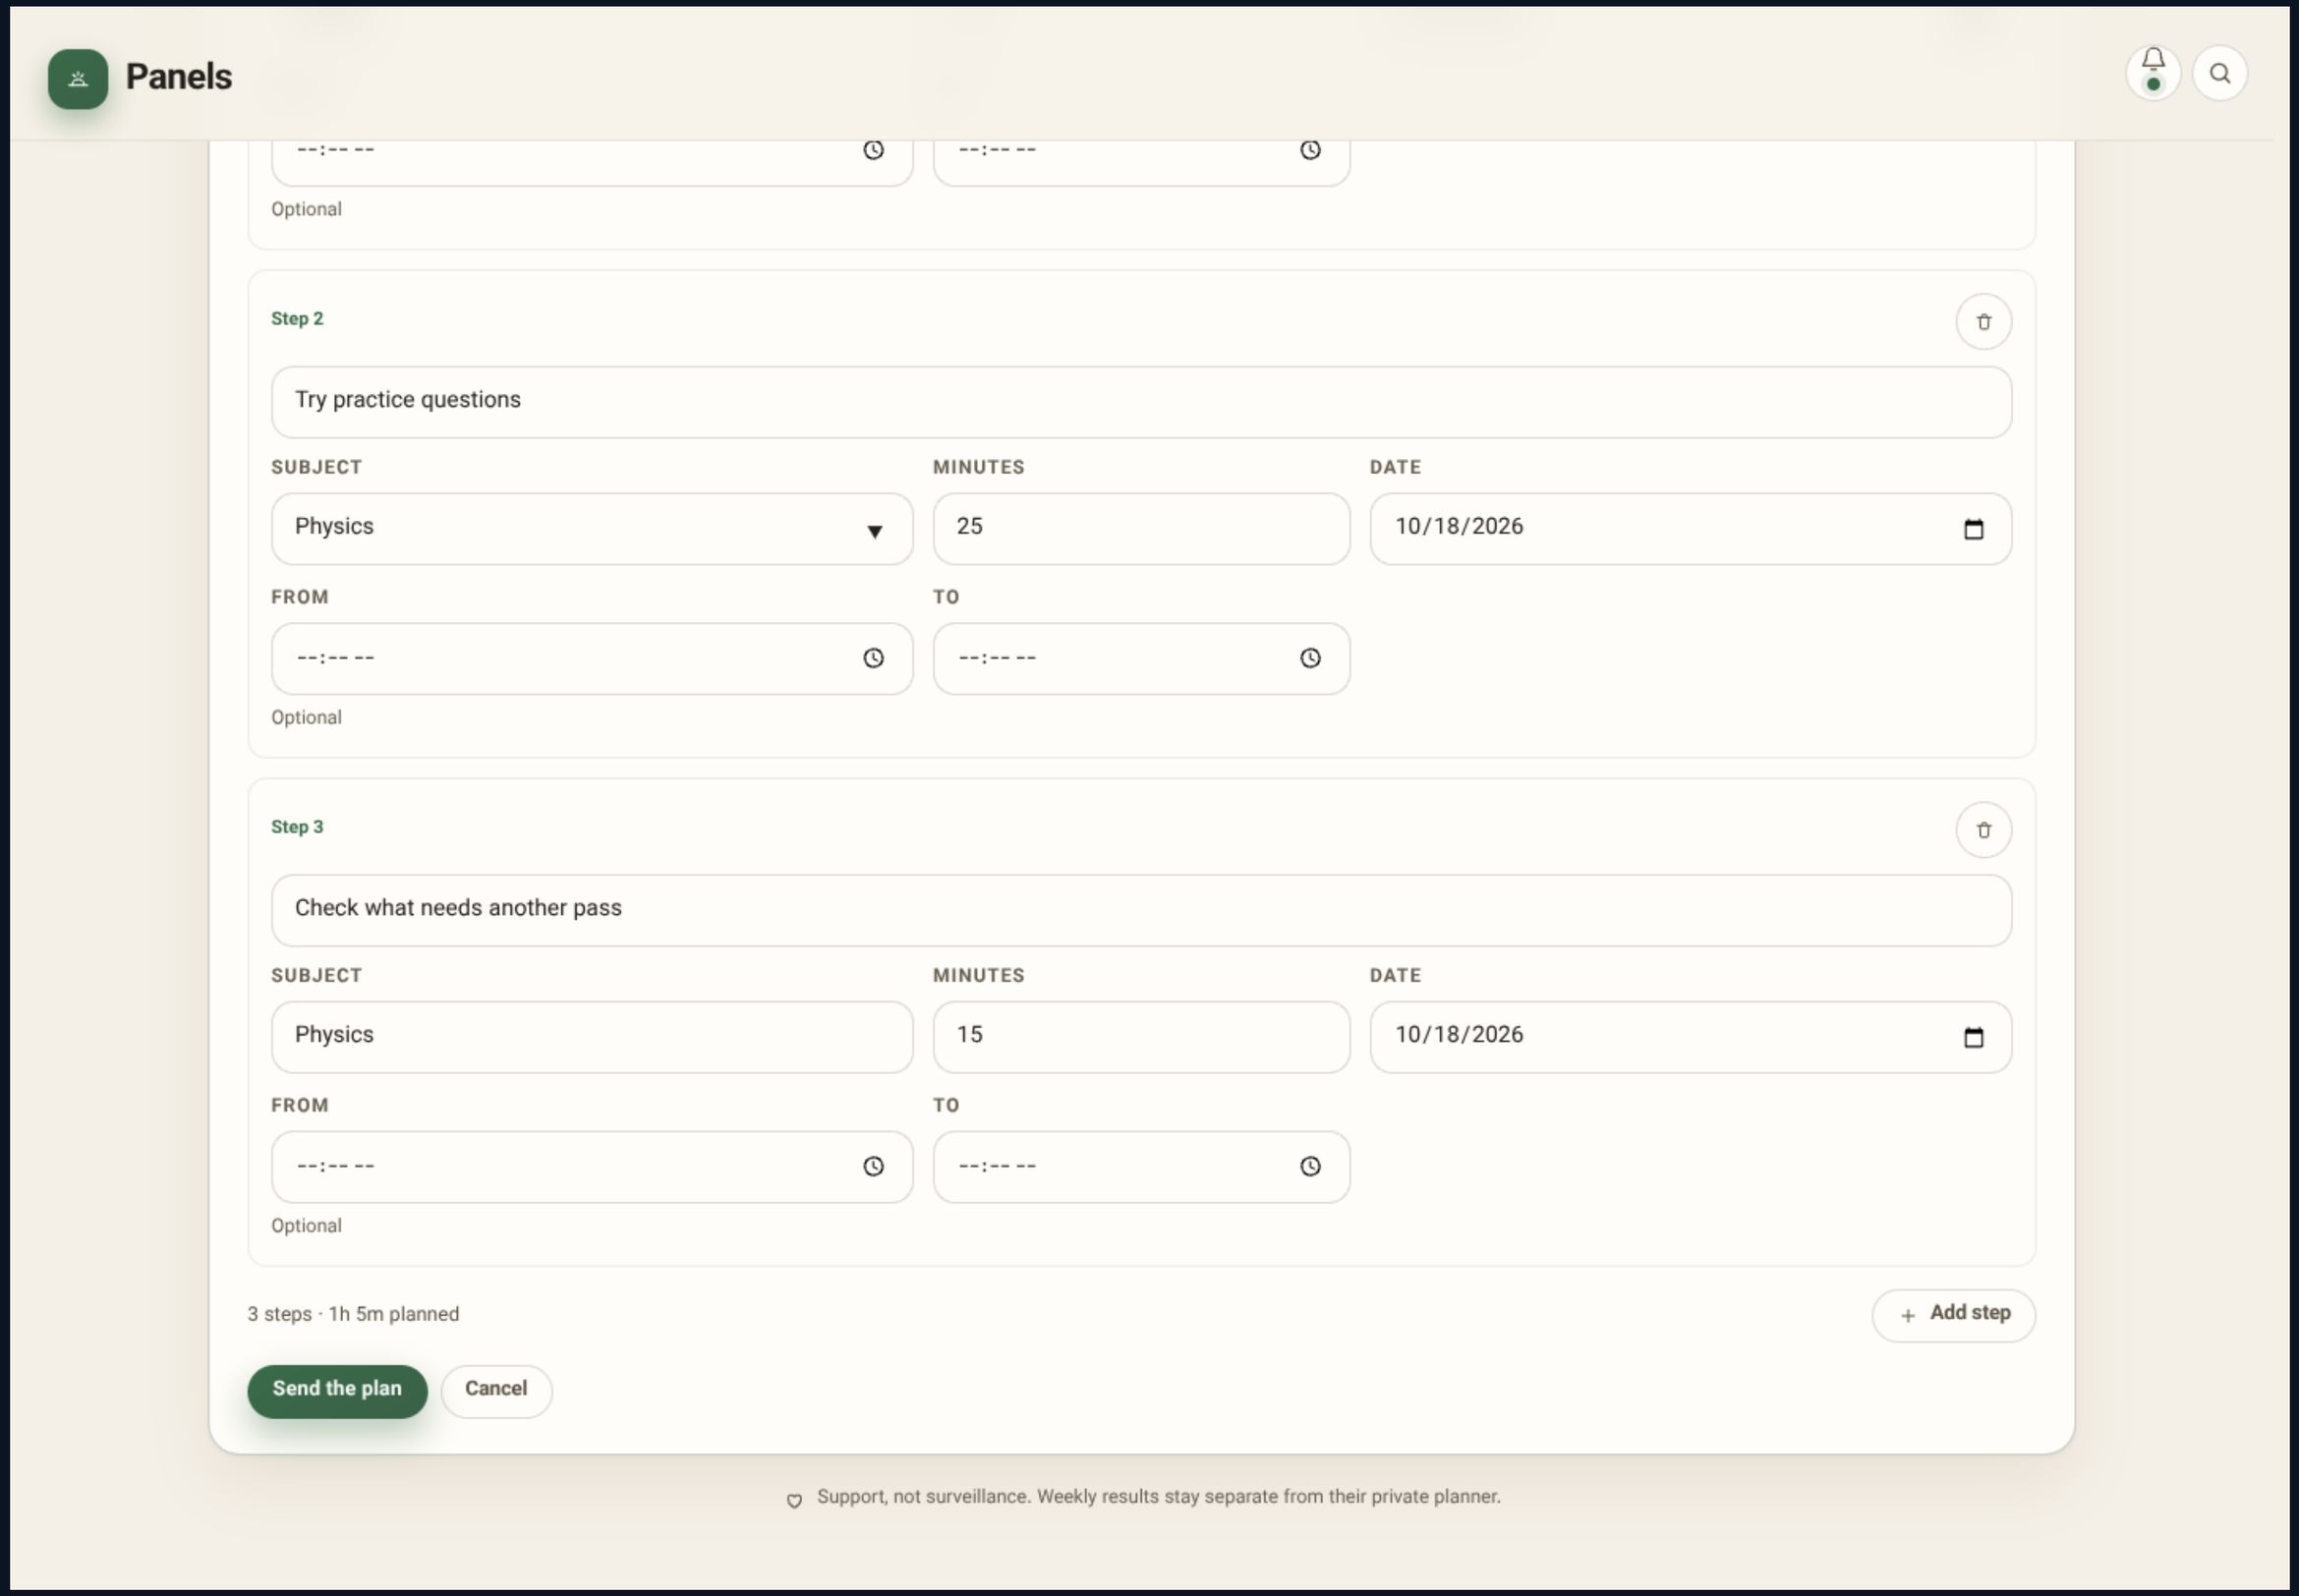

The guardian reviews shared totals, charts, currentness and sent-plan progress—not the student’s private planner.

Plan in steps: day, week or month

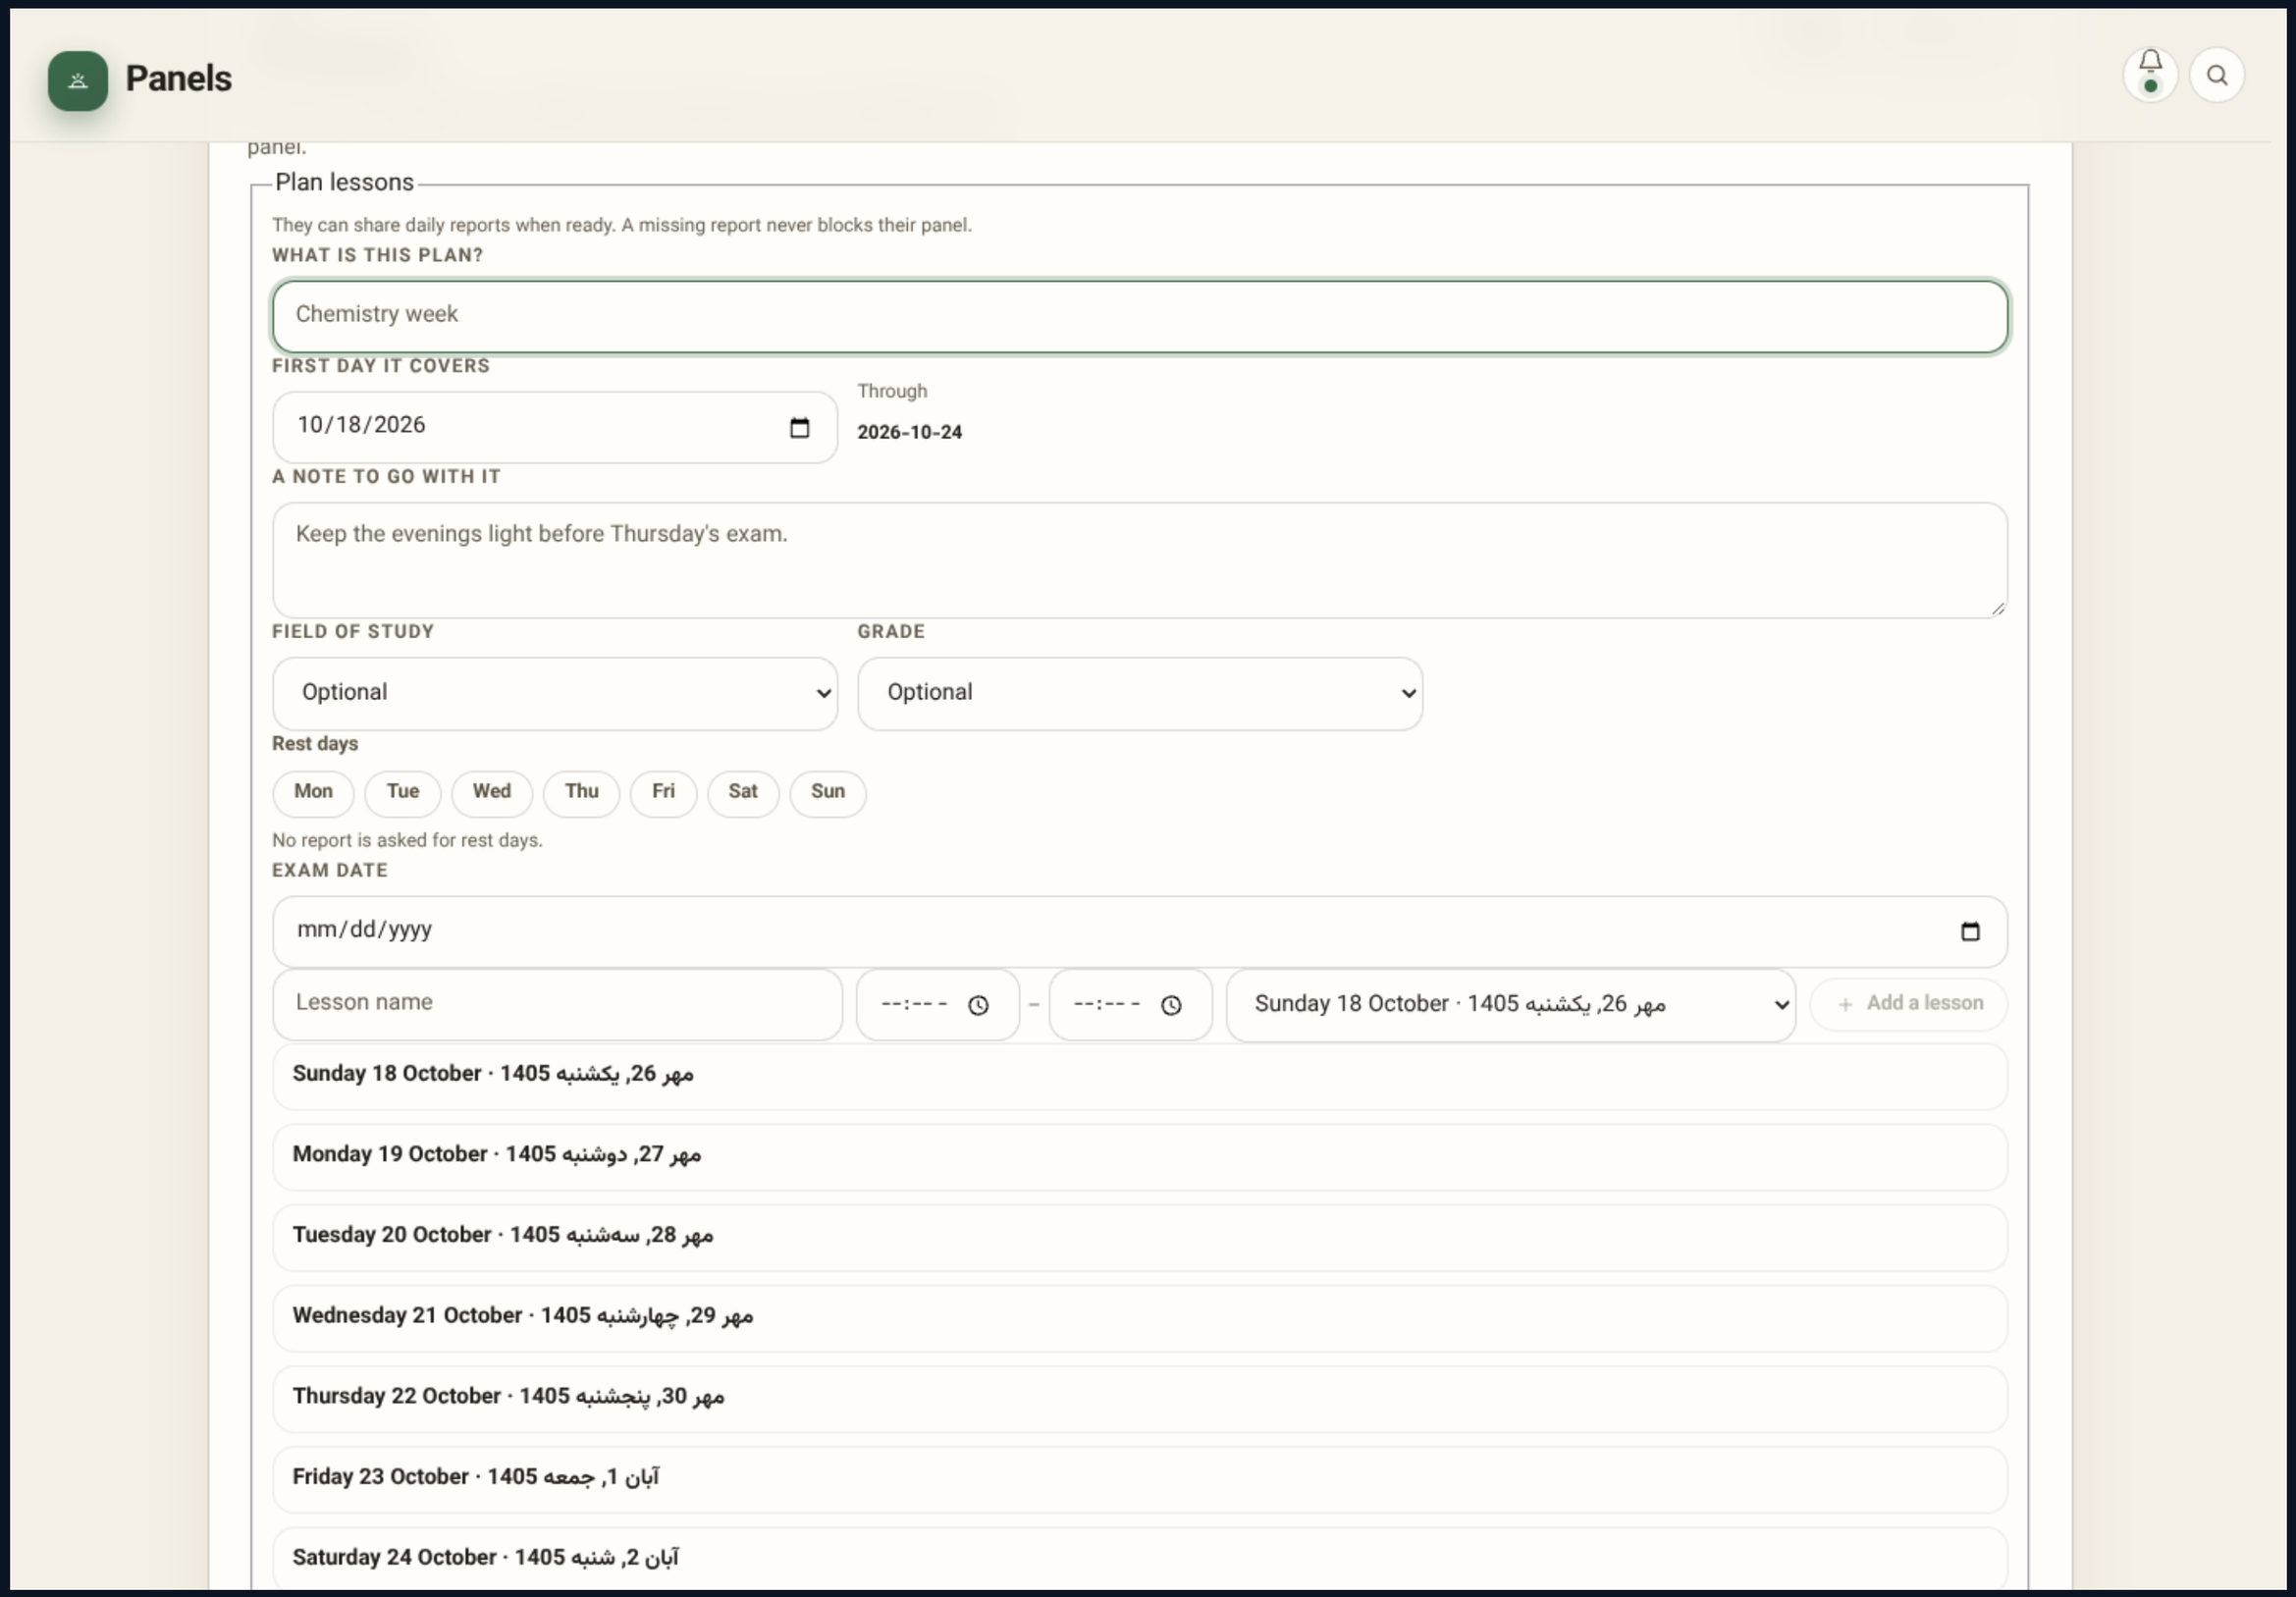

Send editable suggestions with dates, subjects, effort and optional start/end times. Preview total effort before sending.

Start from exam preparation

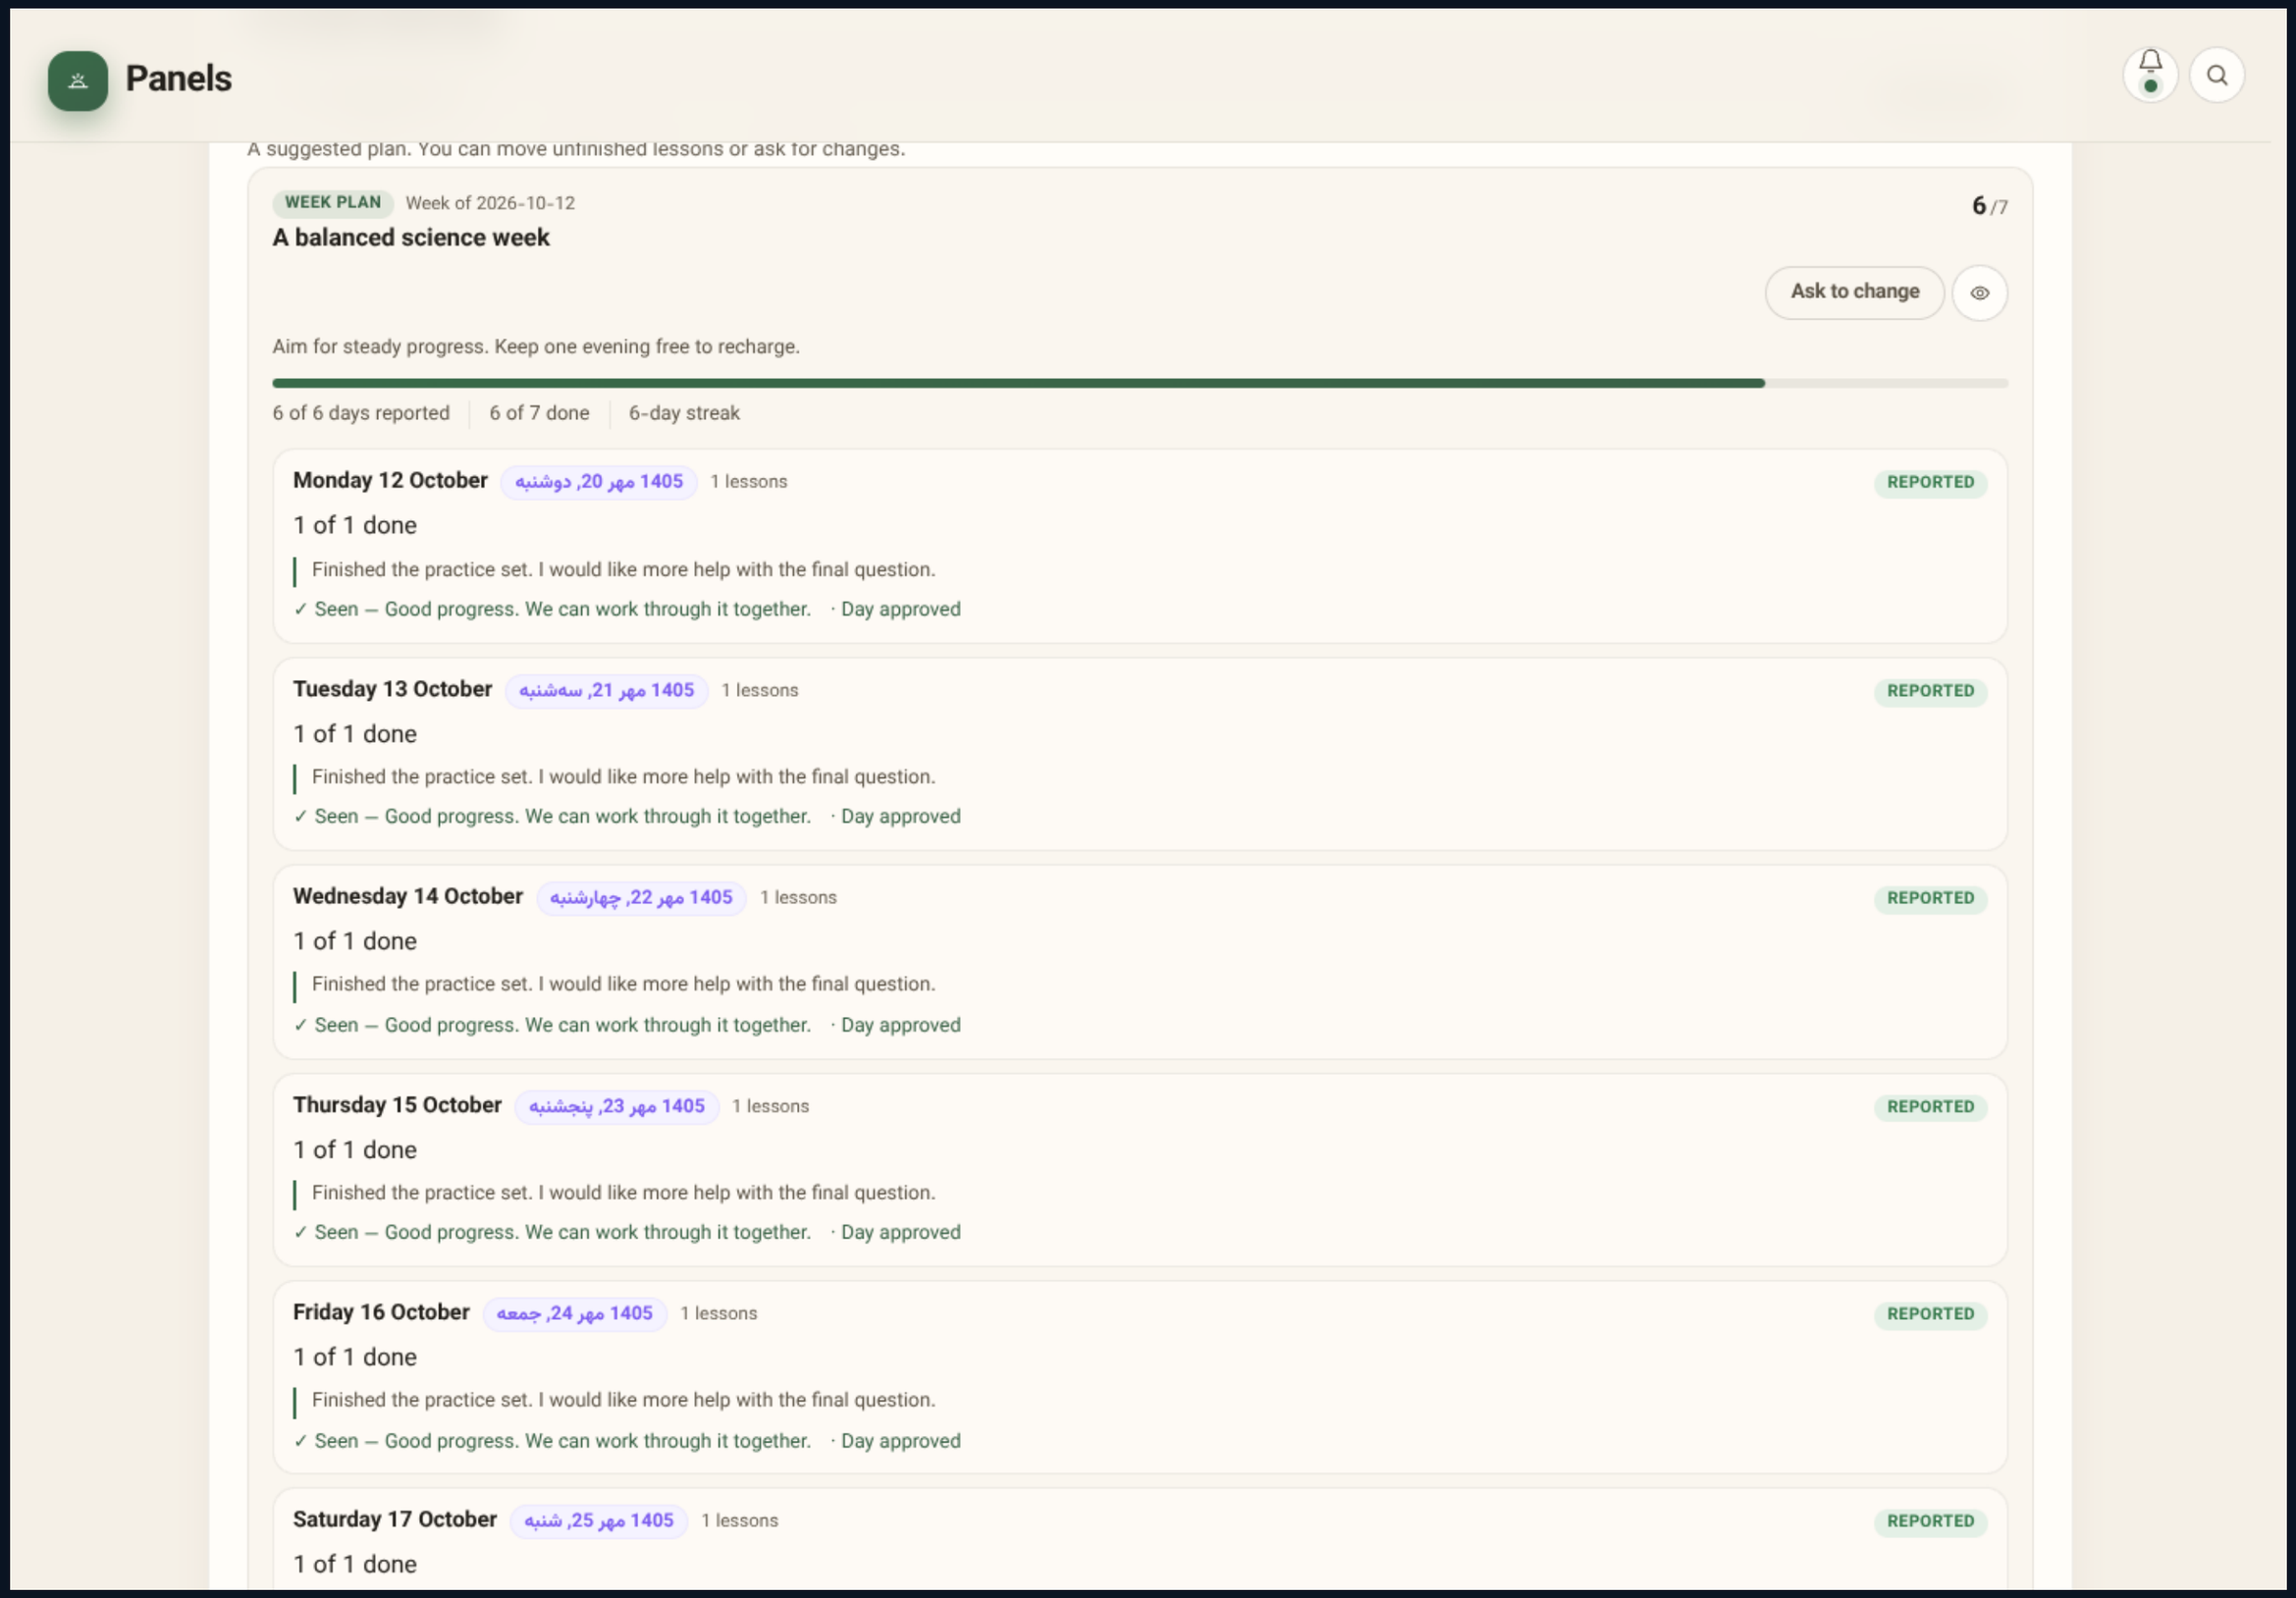

Templates create editable steps, not silent personal tasks. Current-period suggestions start today rather than assigning elapsed days.

Build a timed lesson week

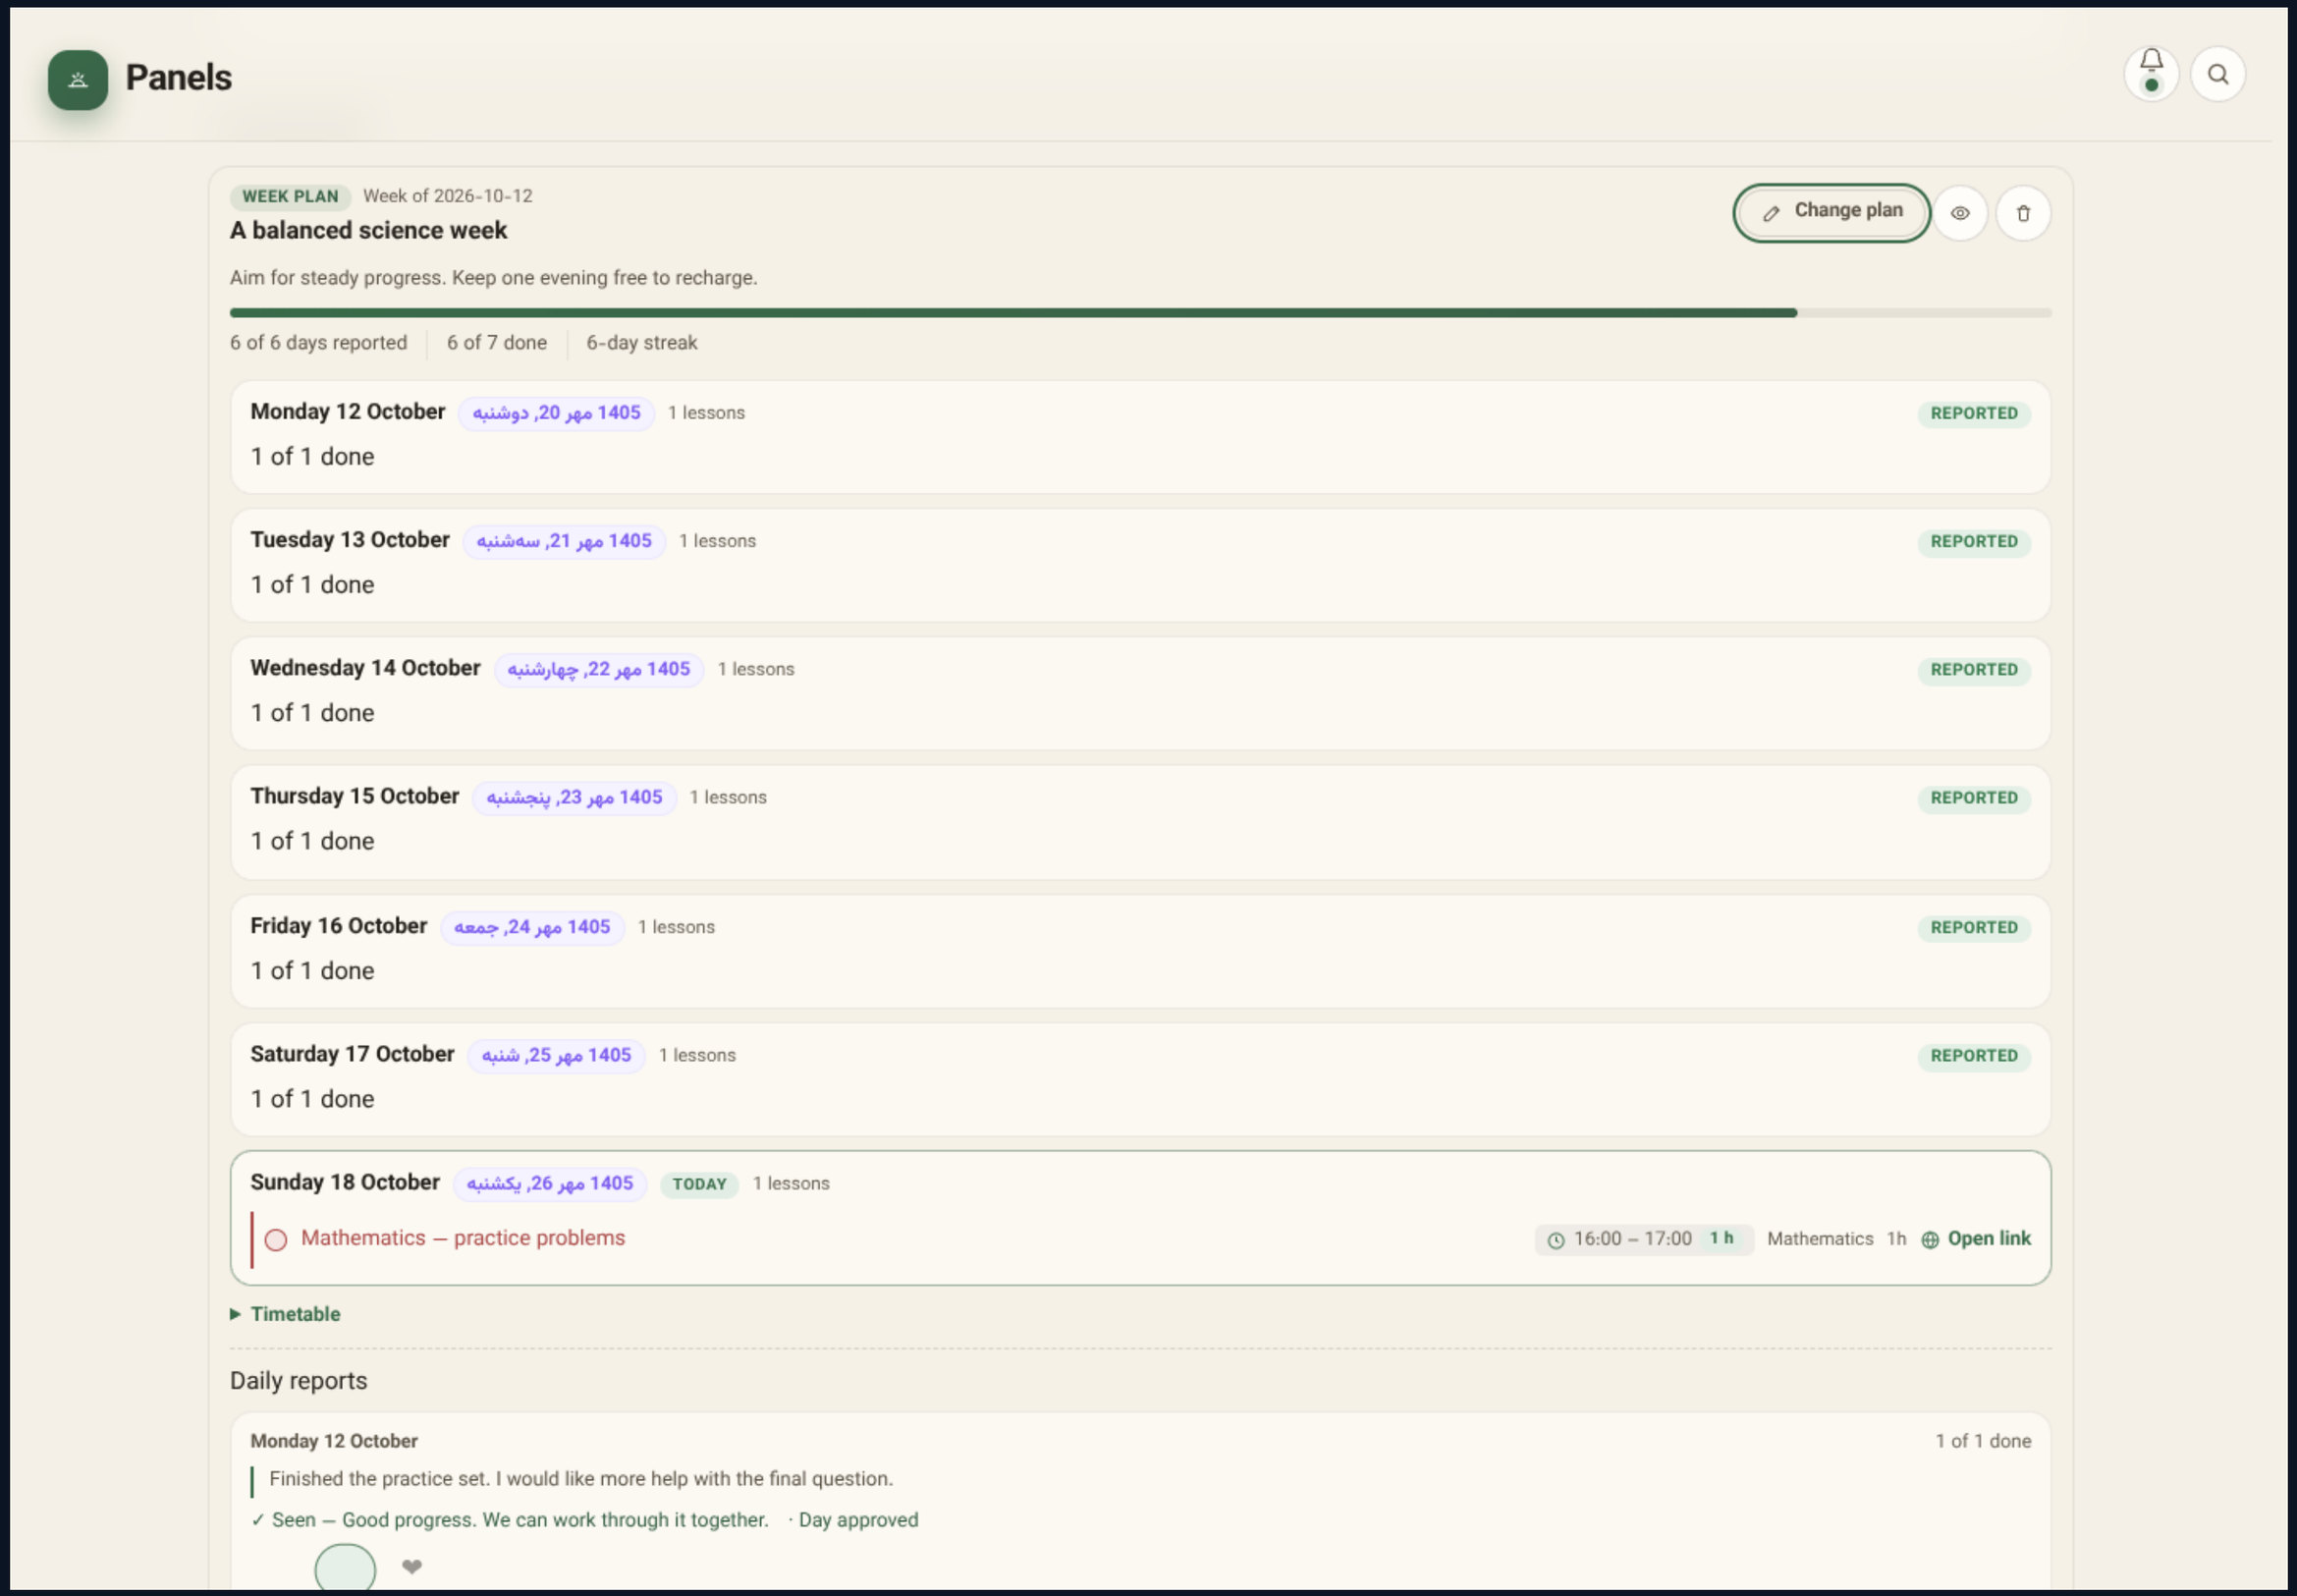

Choose Iranian curriculum lessons (grades 10–12), field/grade, lesson times, rest days and prep links. A warning flags heavy pre-exam loads. Offline guardian plans queue for later delivery; sending requires a configured account link.

Student receives the guardian’s week

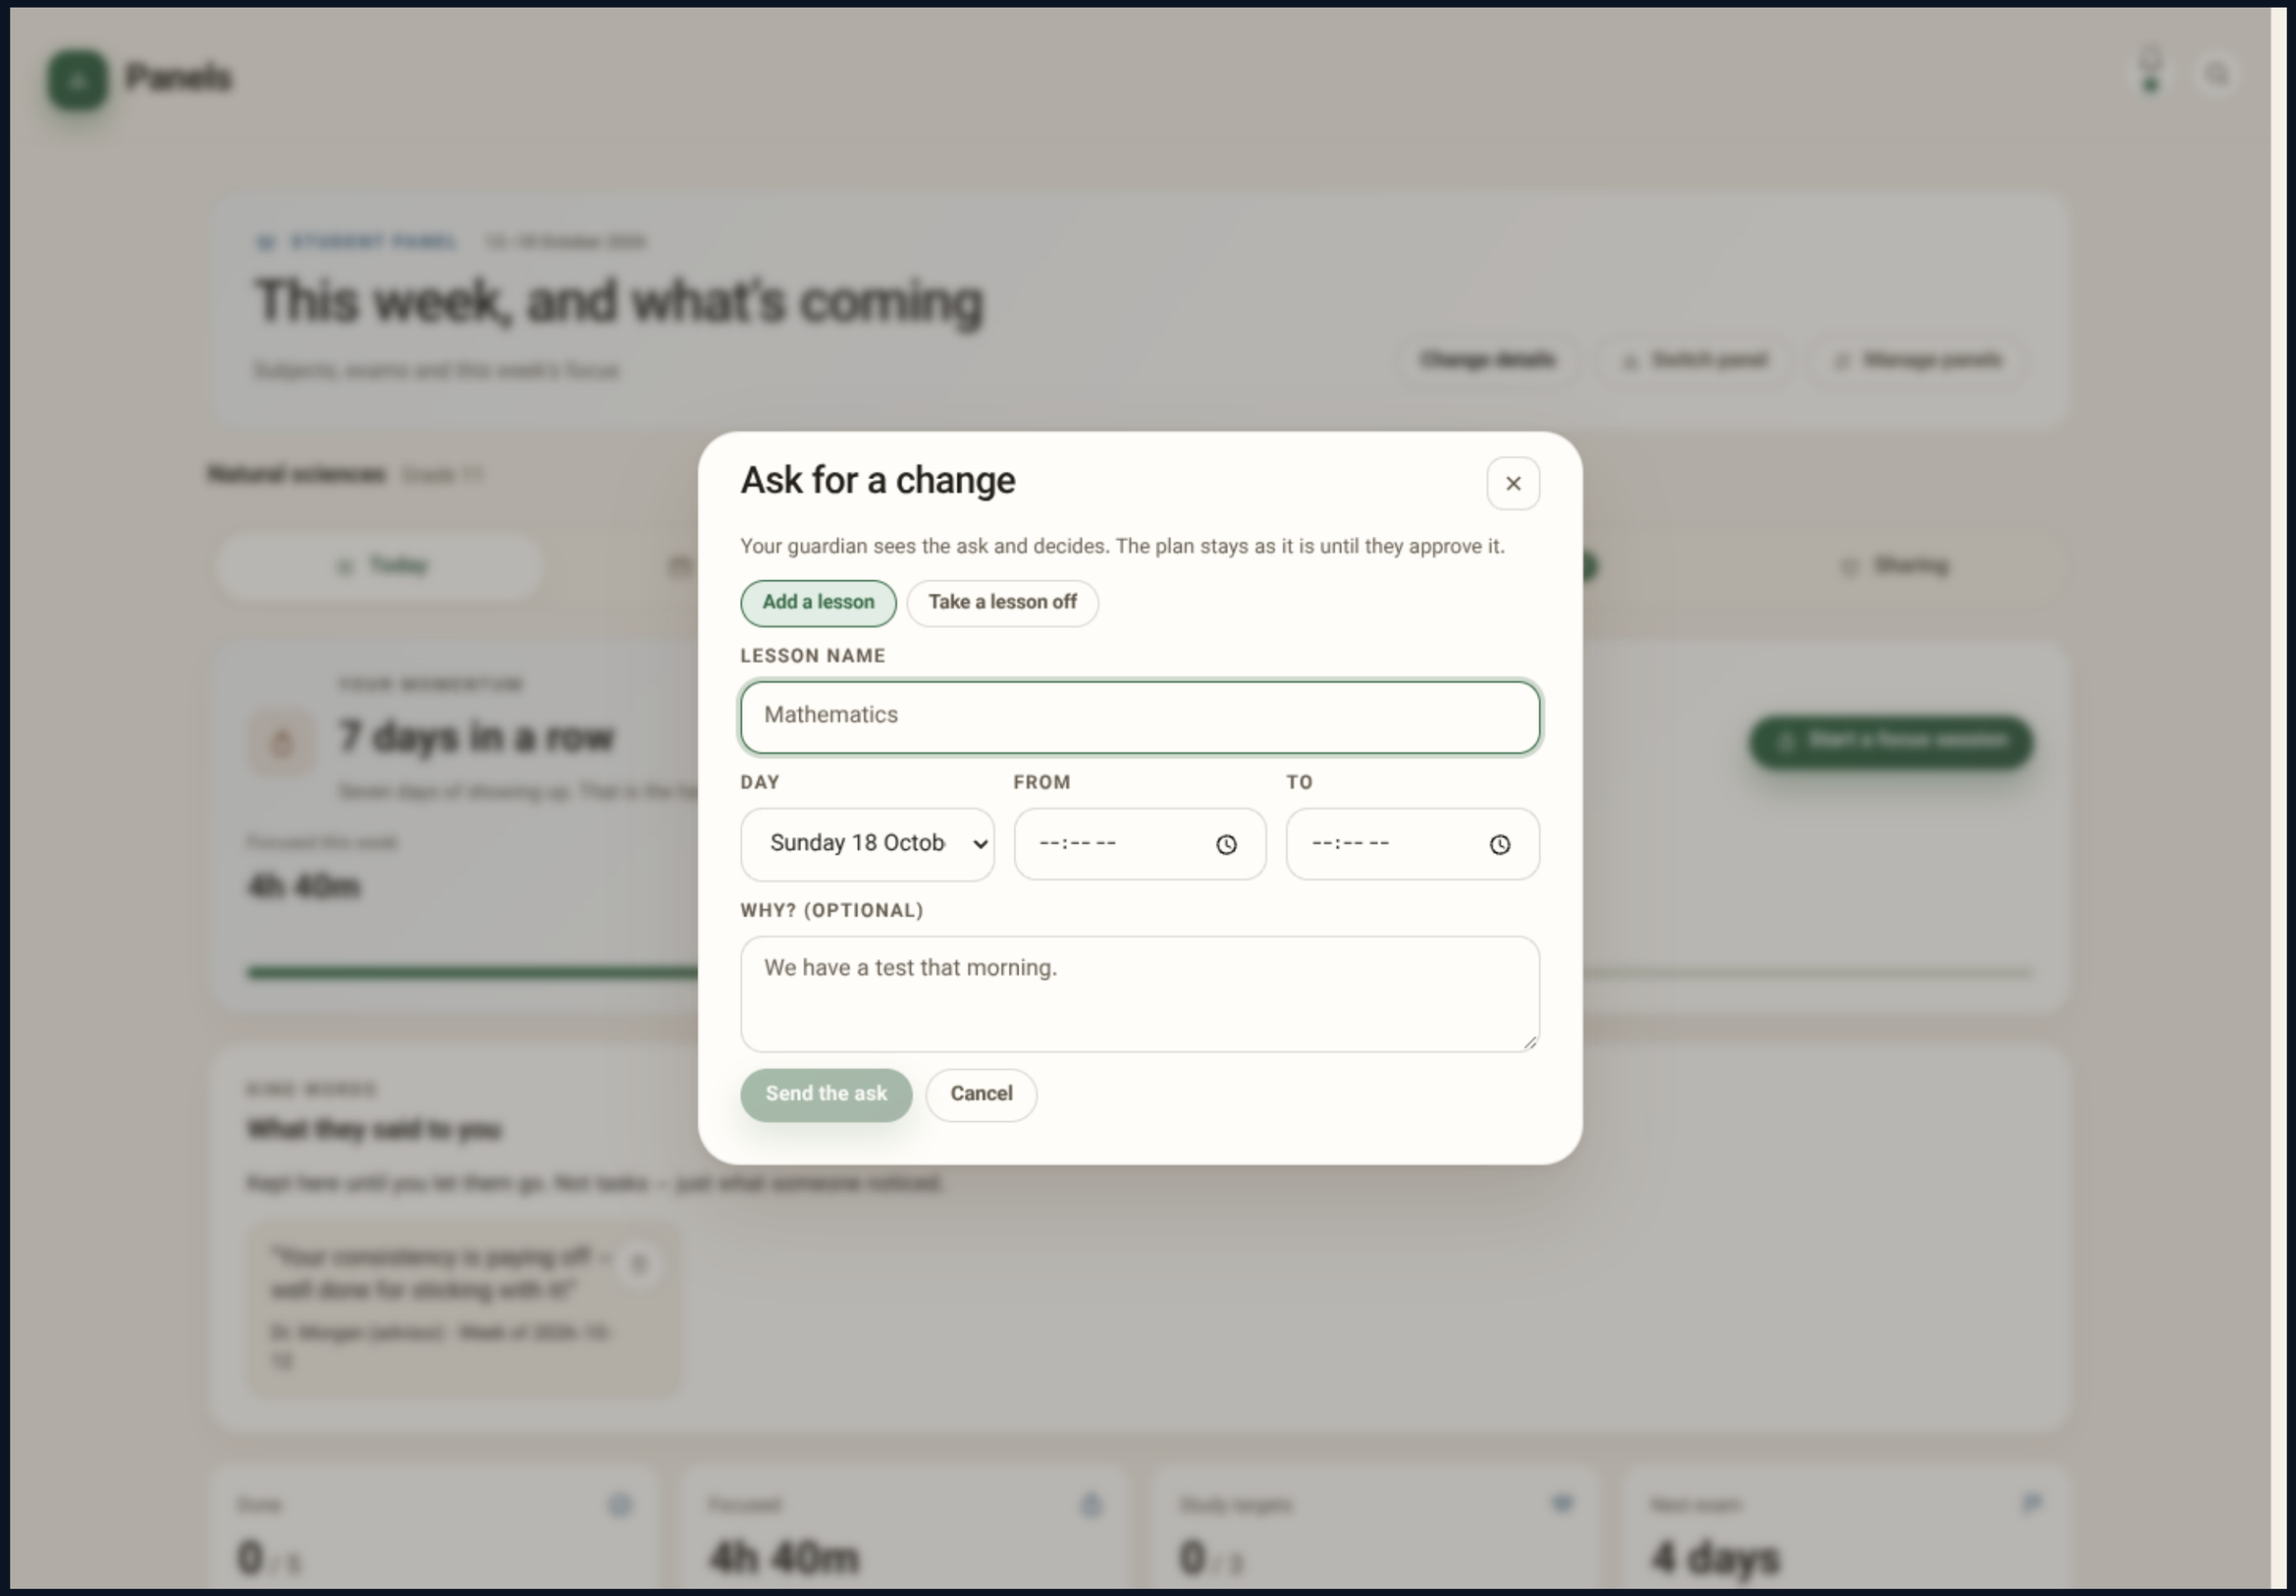

Guardian → student: the same timed lessons and prep links. Student → guardian: ticks and daily reports. Ask for a plan, move unfinished work or request a change. Preview/print offers a narrative week and wall timetable.

The shared lesson week

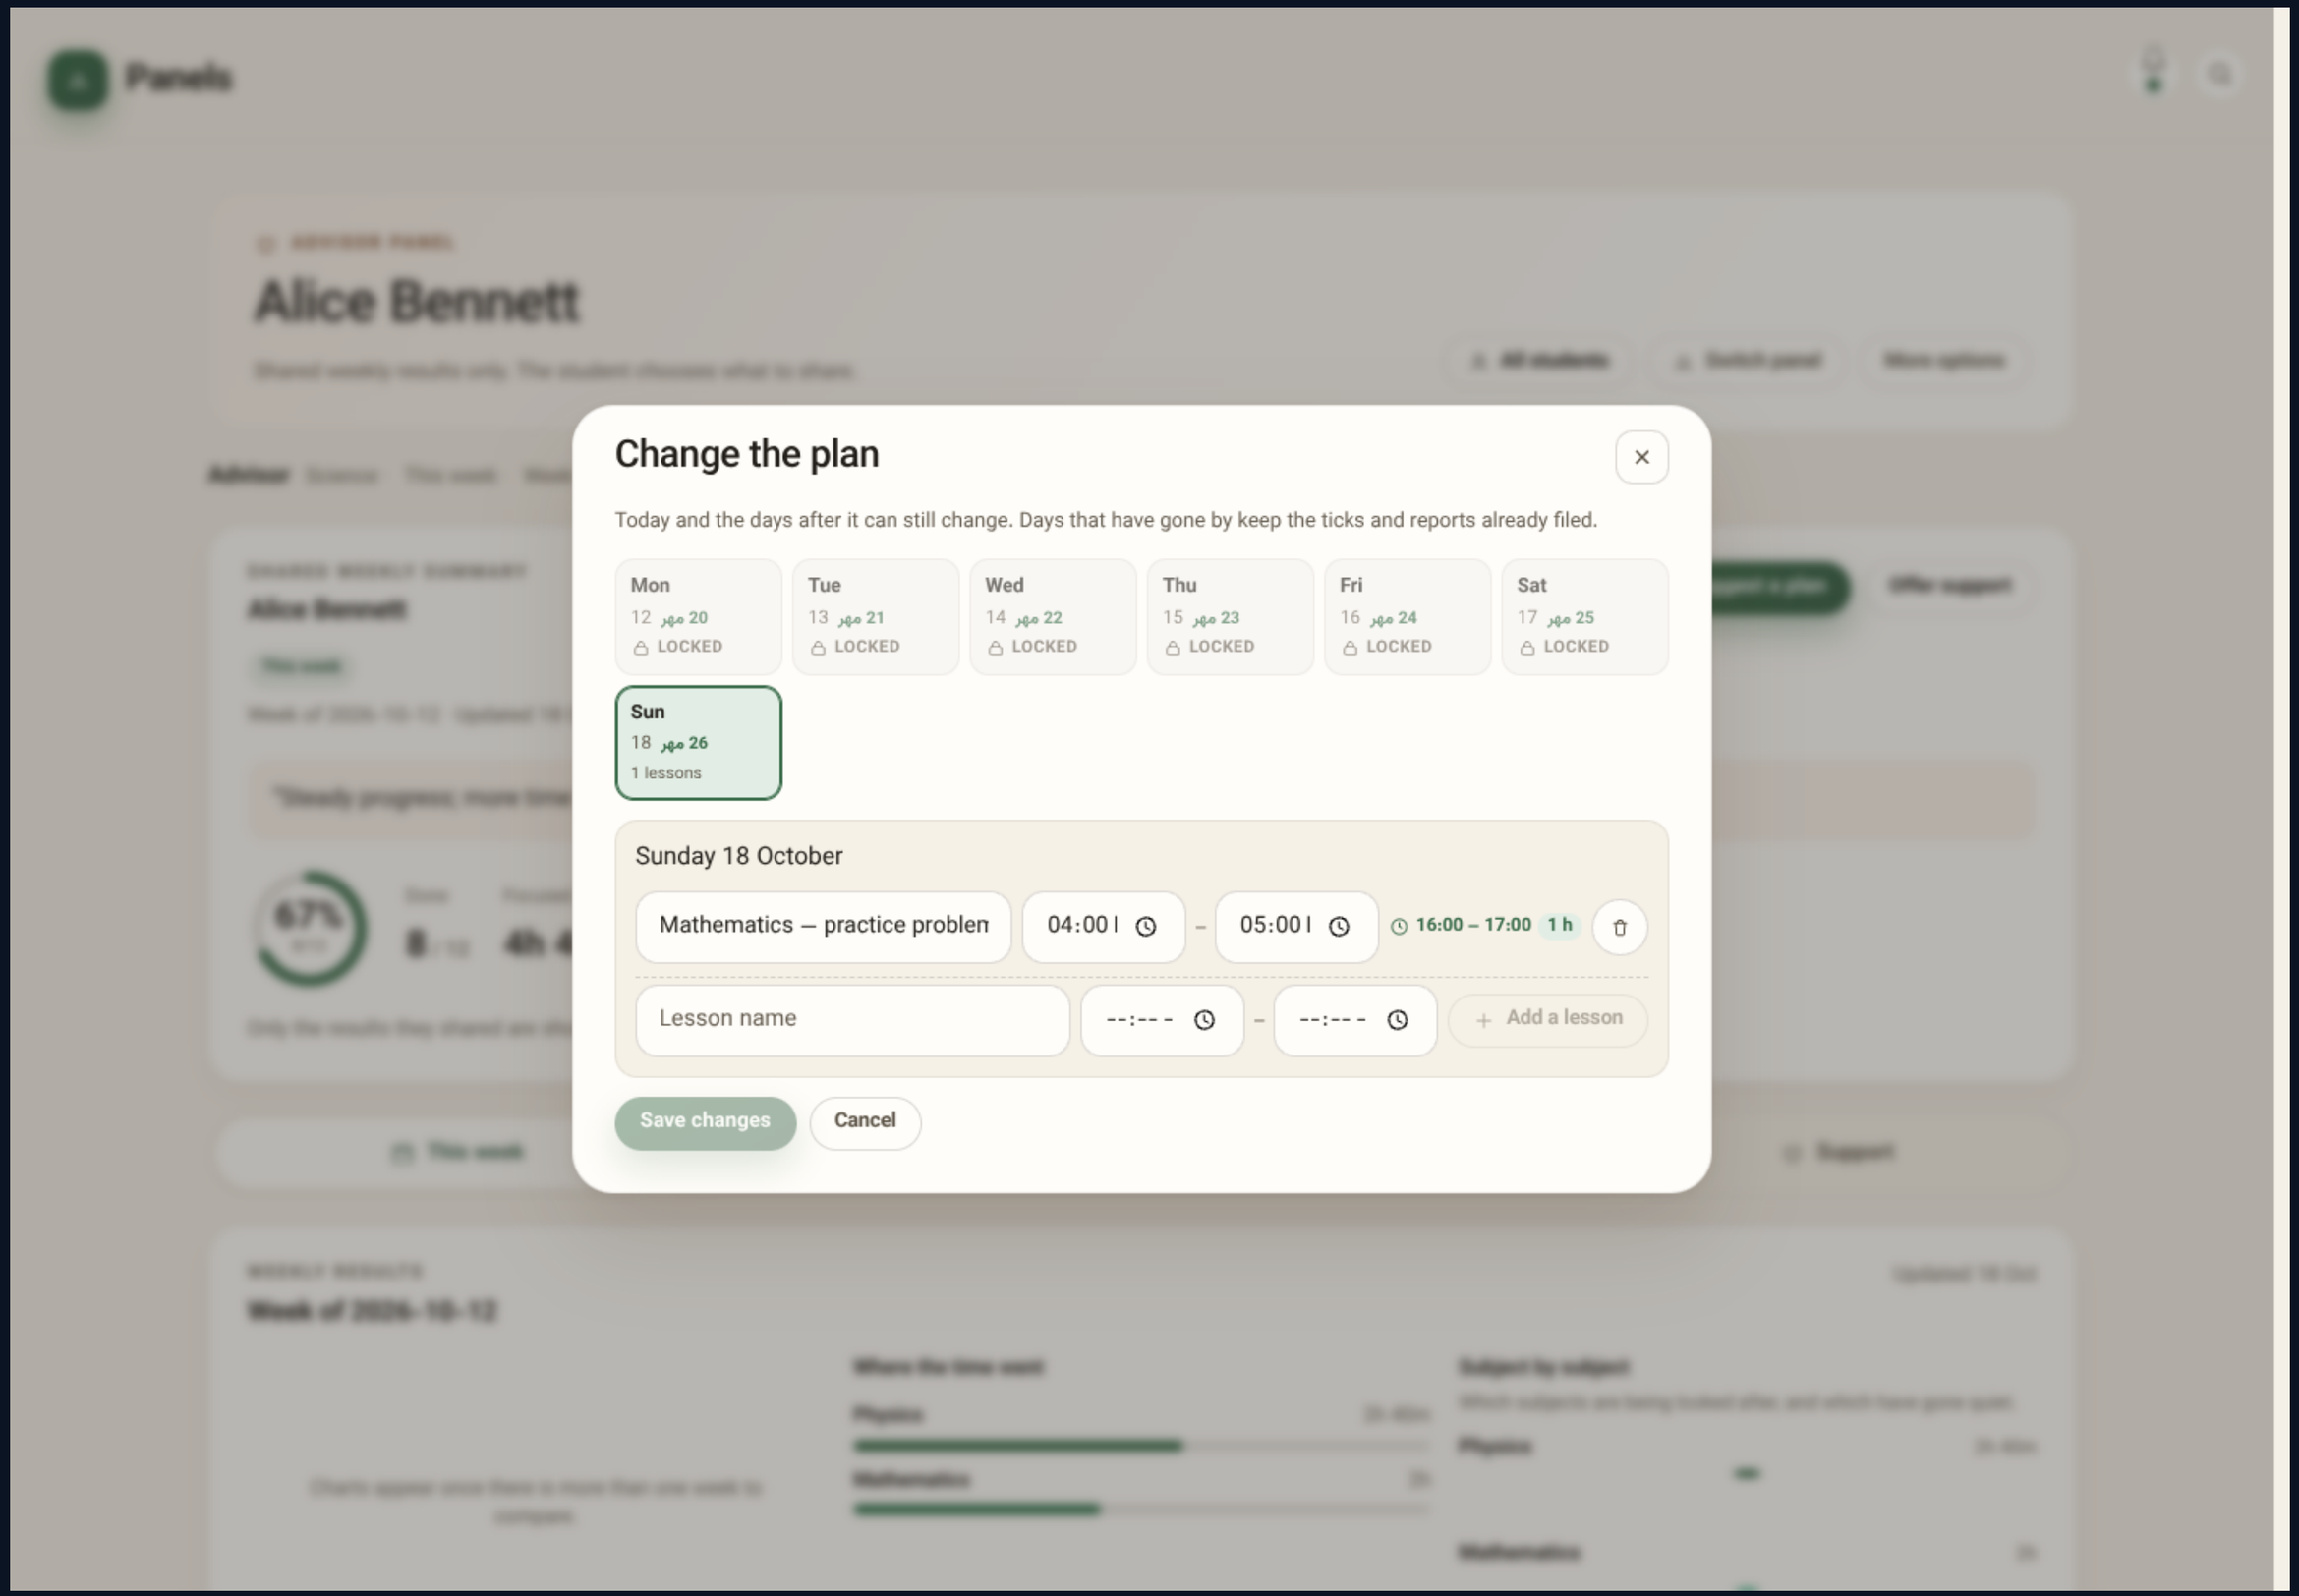

Student reports return completed lessons and an optional note. Guardian can mark seen, reply, react and approve. Missing reports do not block the panel, but can restrict lesson/report actions until catch-up. One weekly repair is available.

Student asks; guardian decides

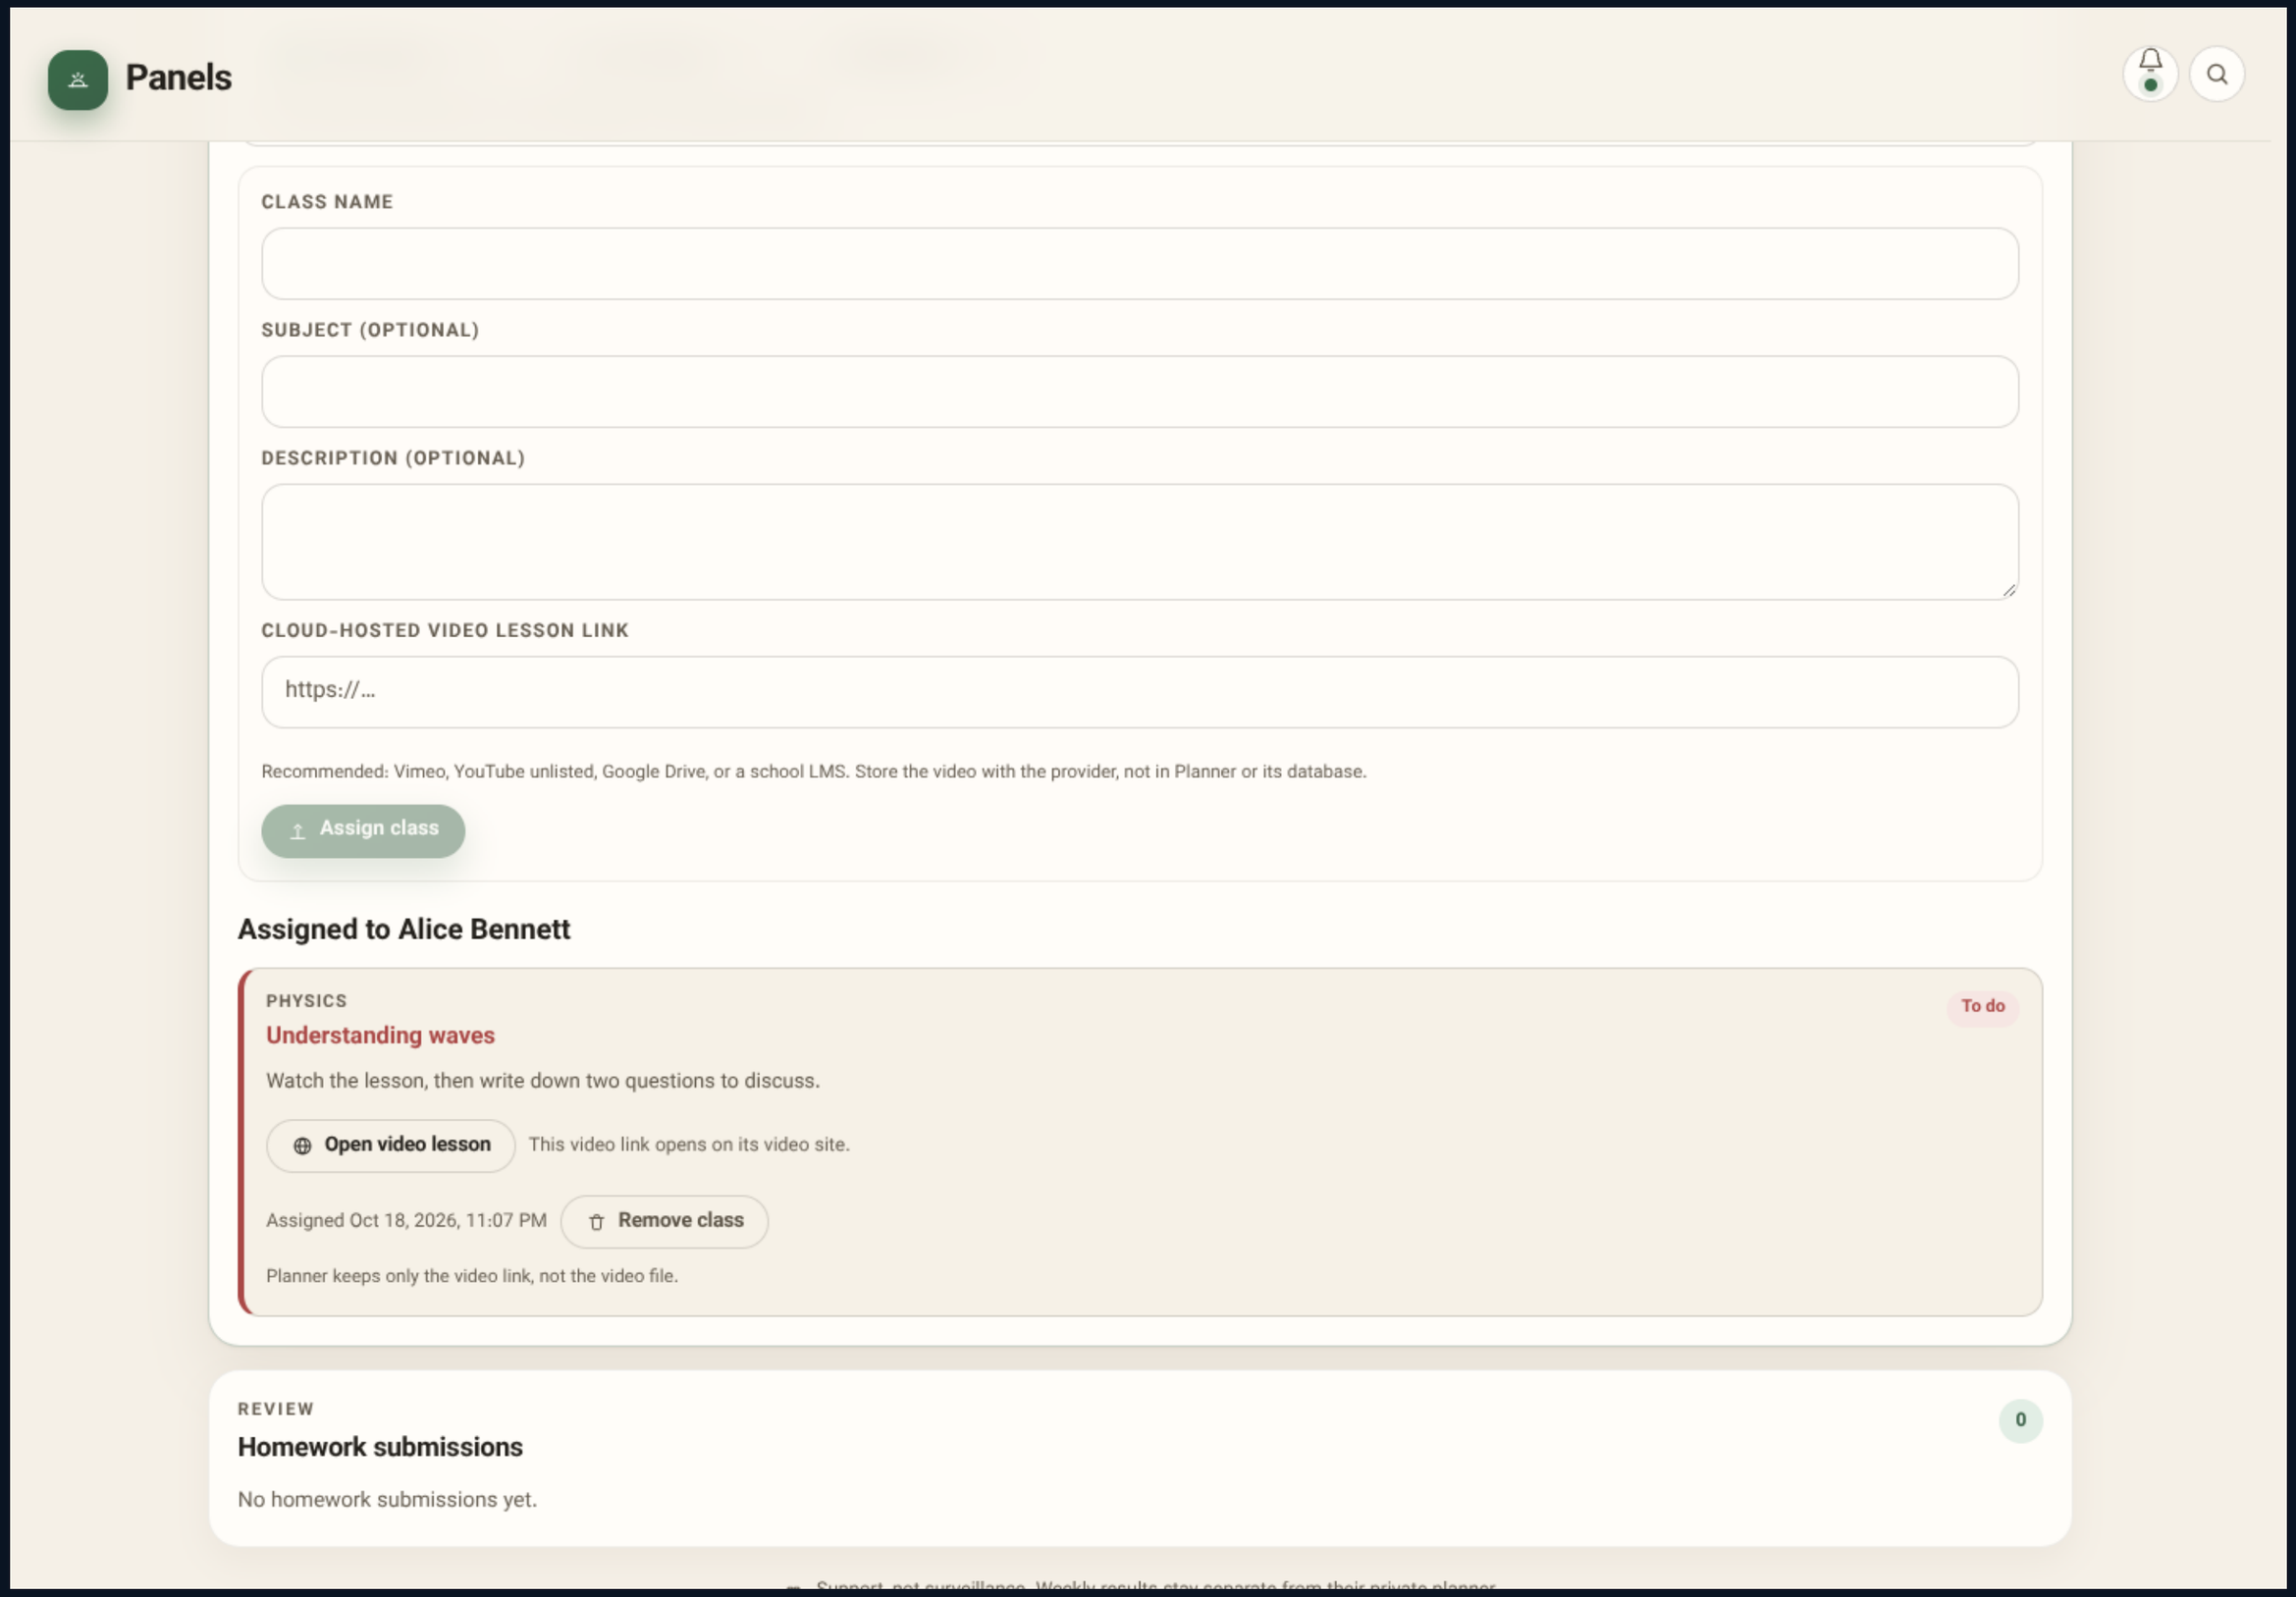

Request a lesson addition/removal with a reason. Nothing changes until the guardian approves; decline can include a reply.

Change the remaining week

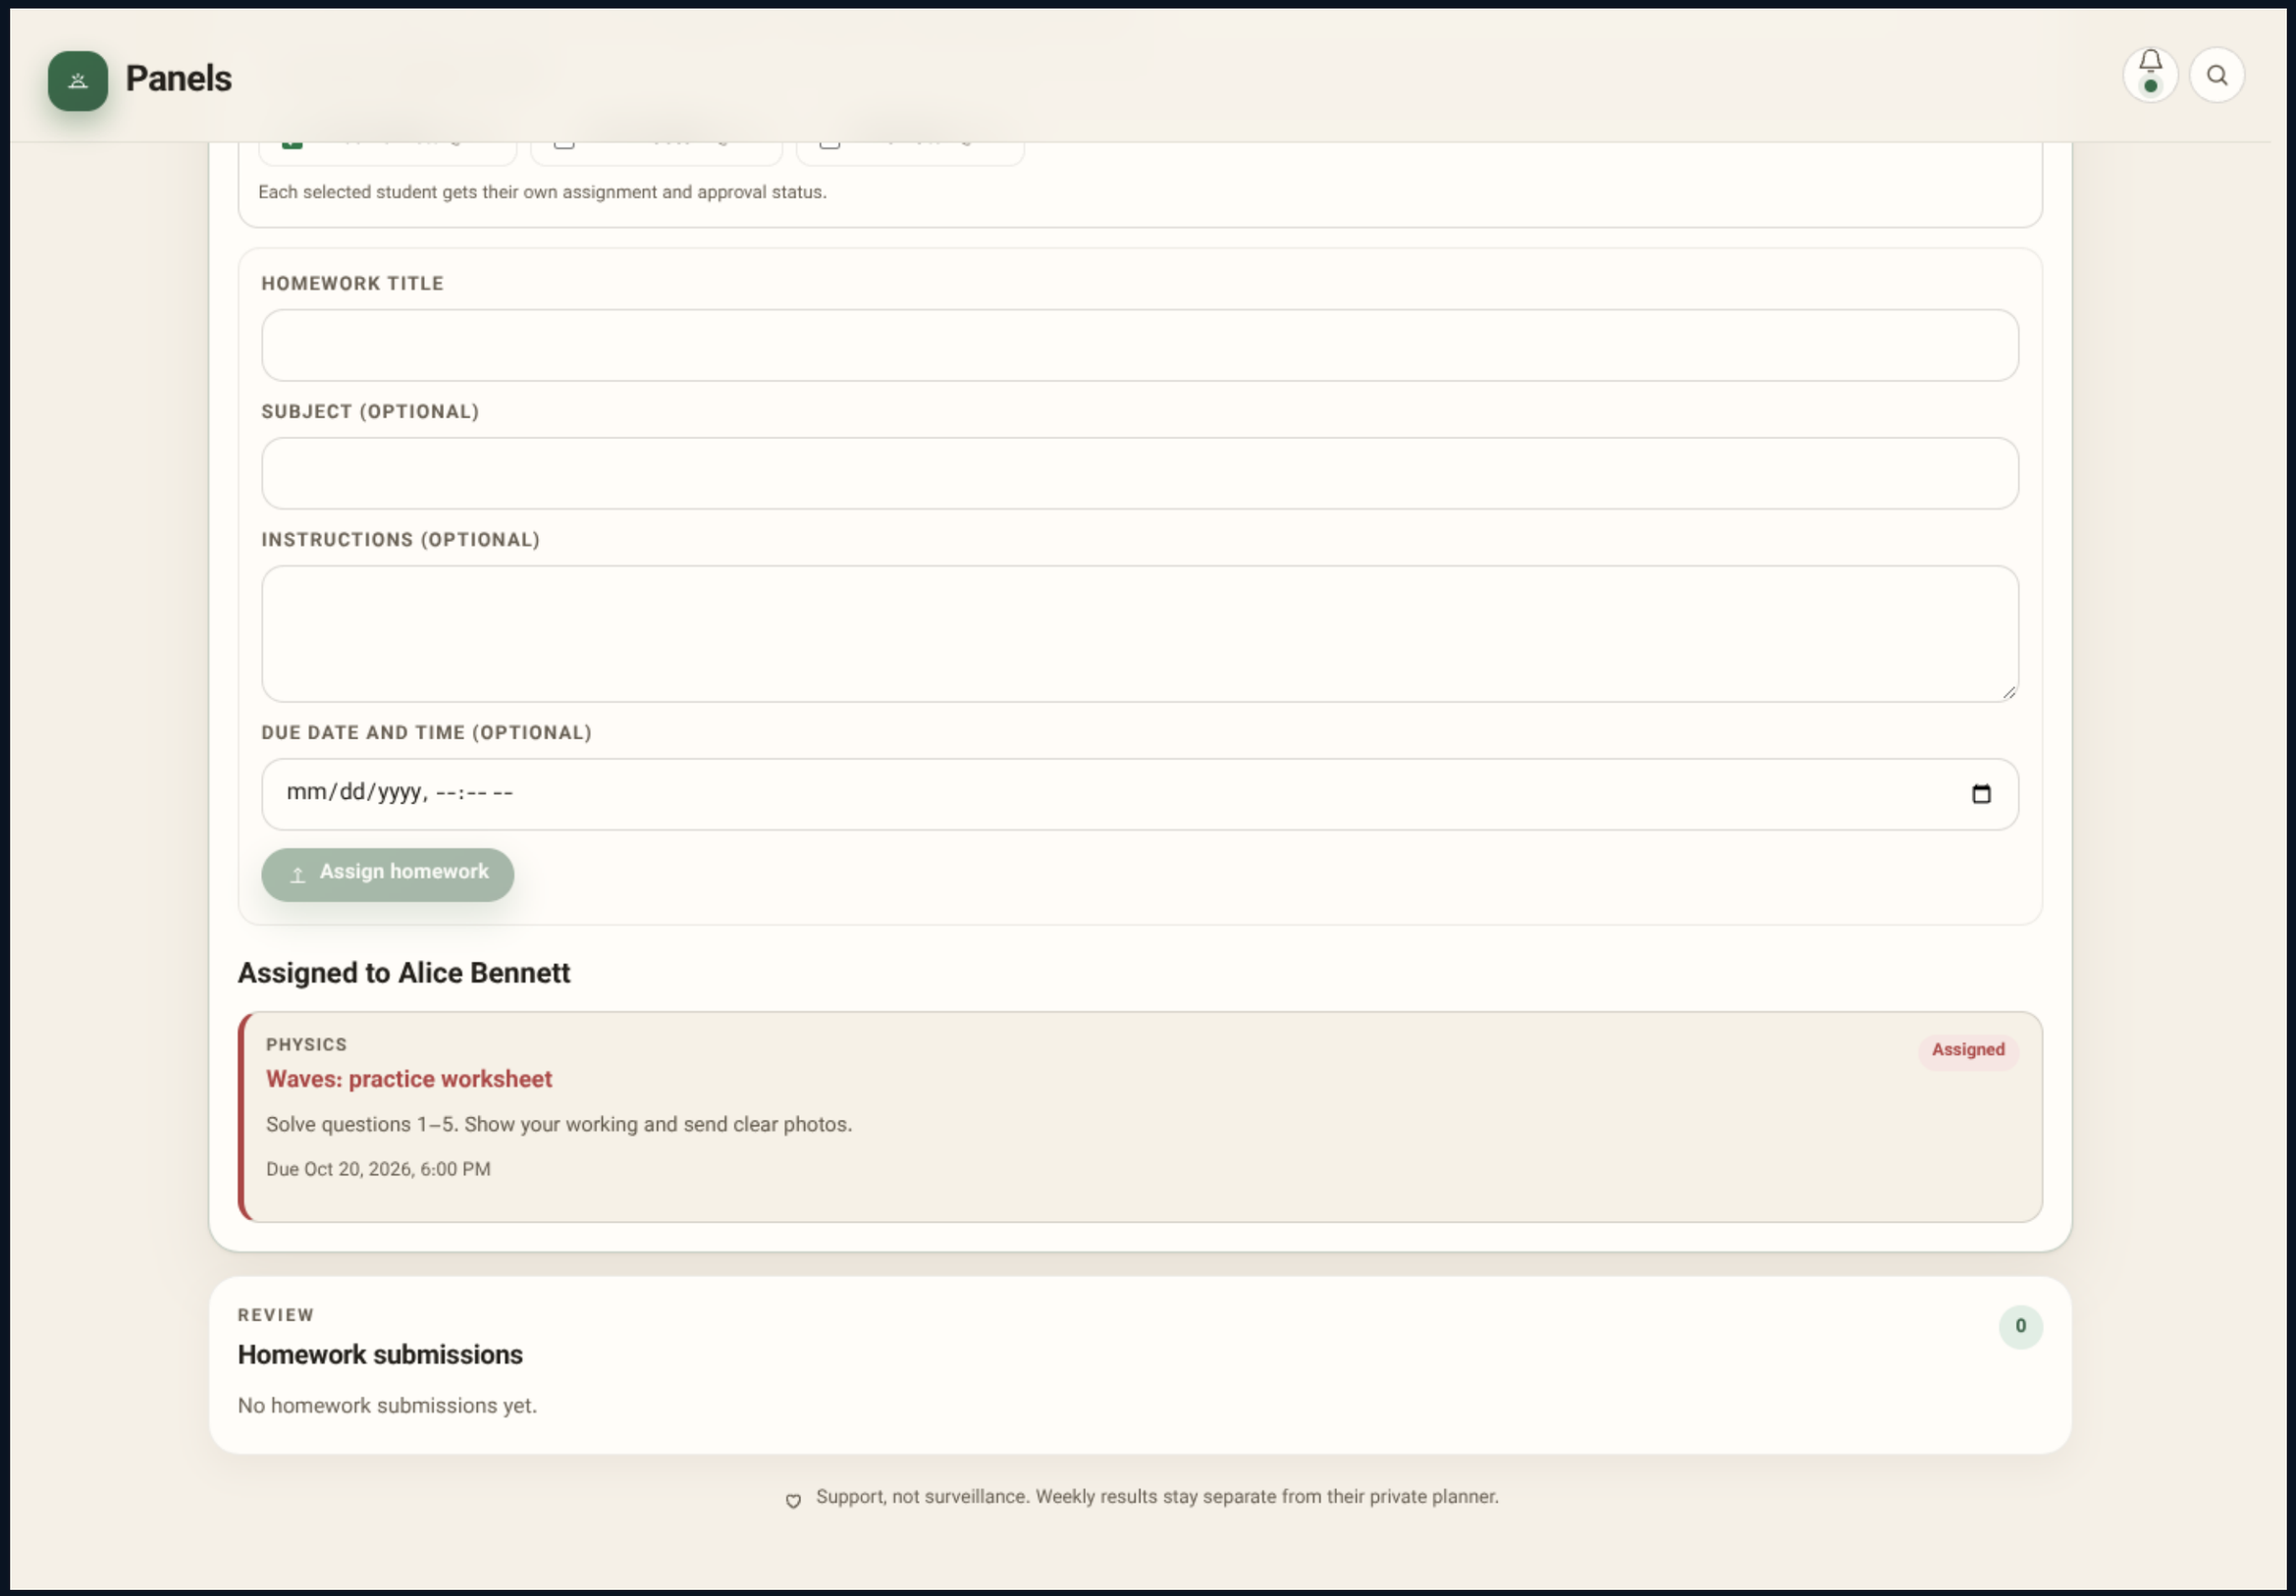

Guardian edits today/future lessons; past ticks and reports stay locked. At period end, summaries replace item detail; guardian sign-off closes a plan. Students can delete eligible old plans or plans from disconnected guardians.

Assign classes to students

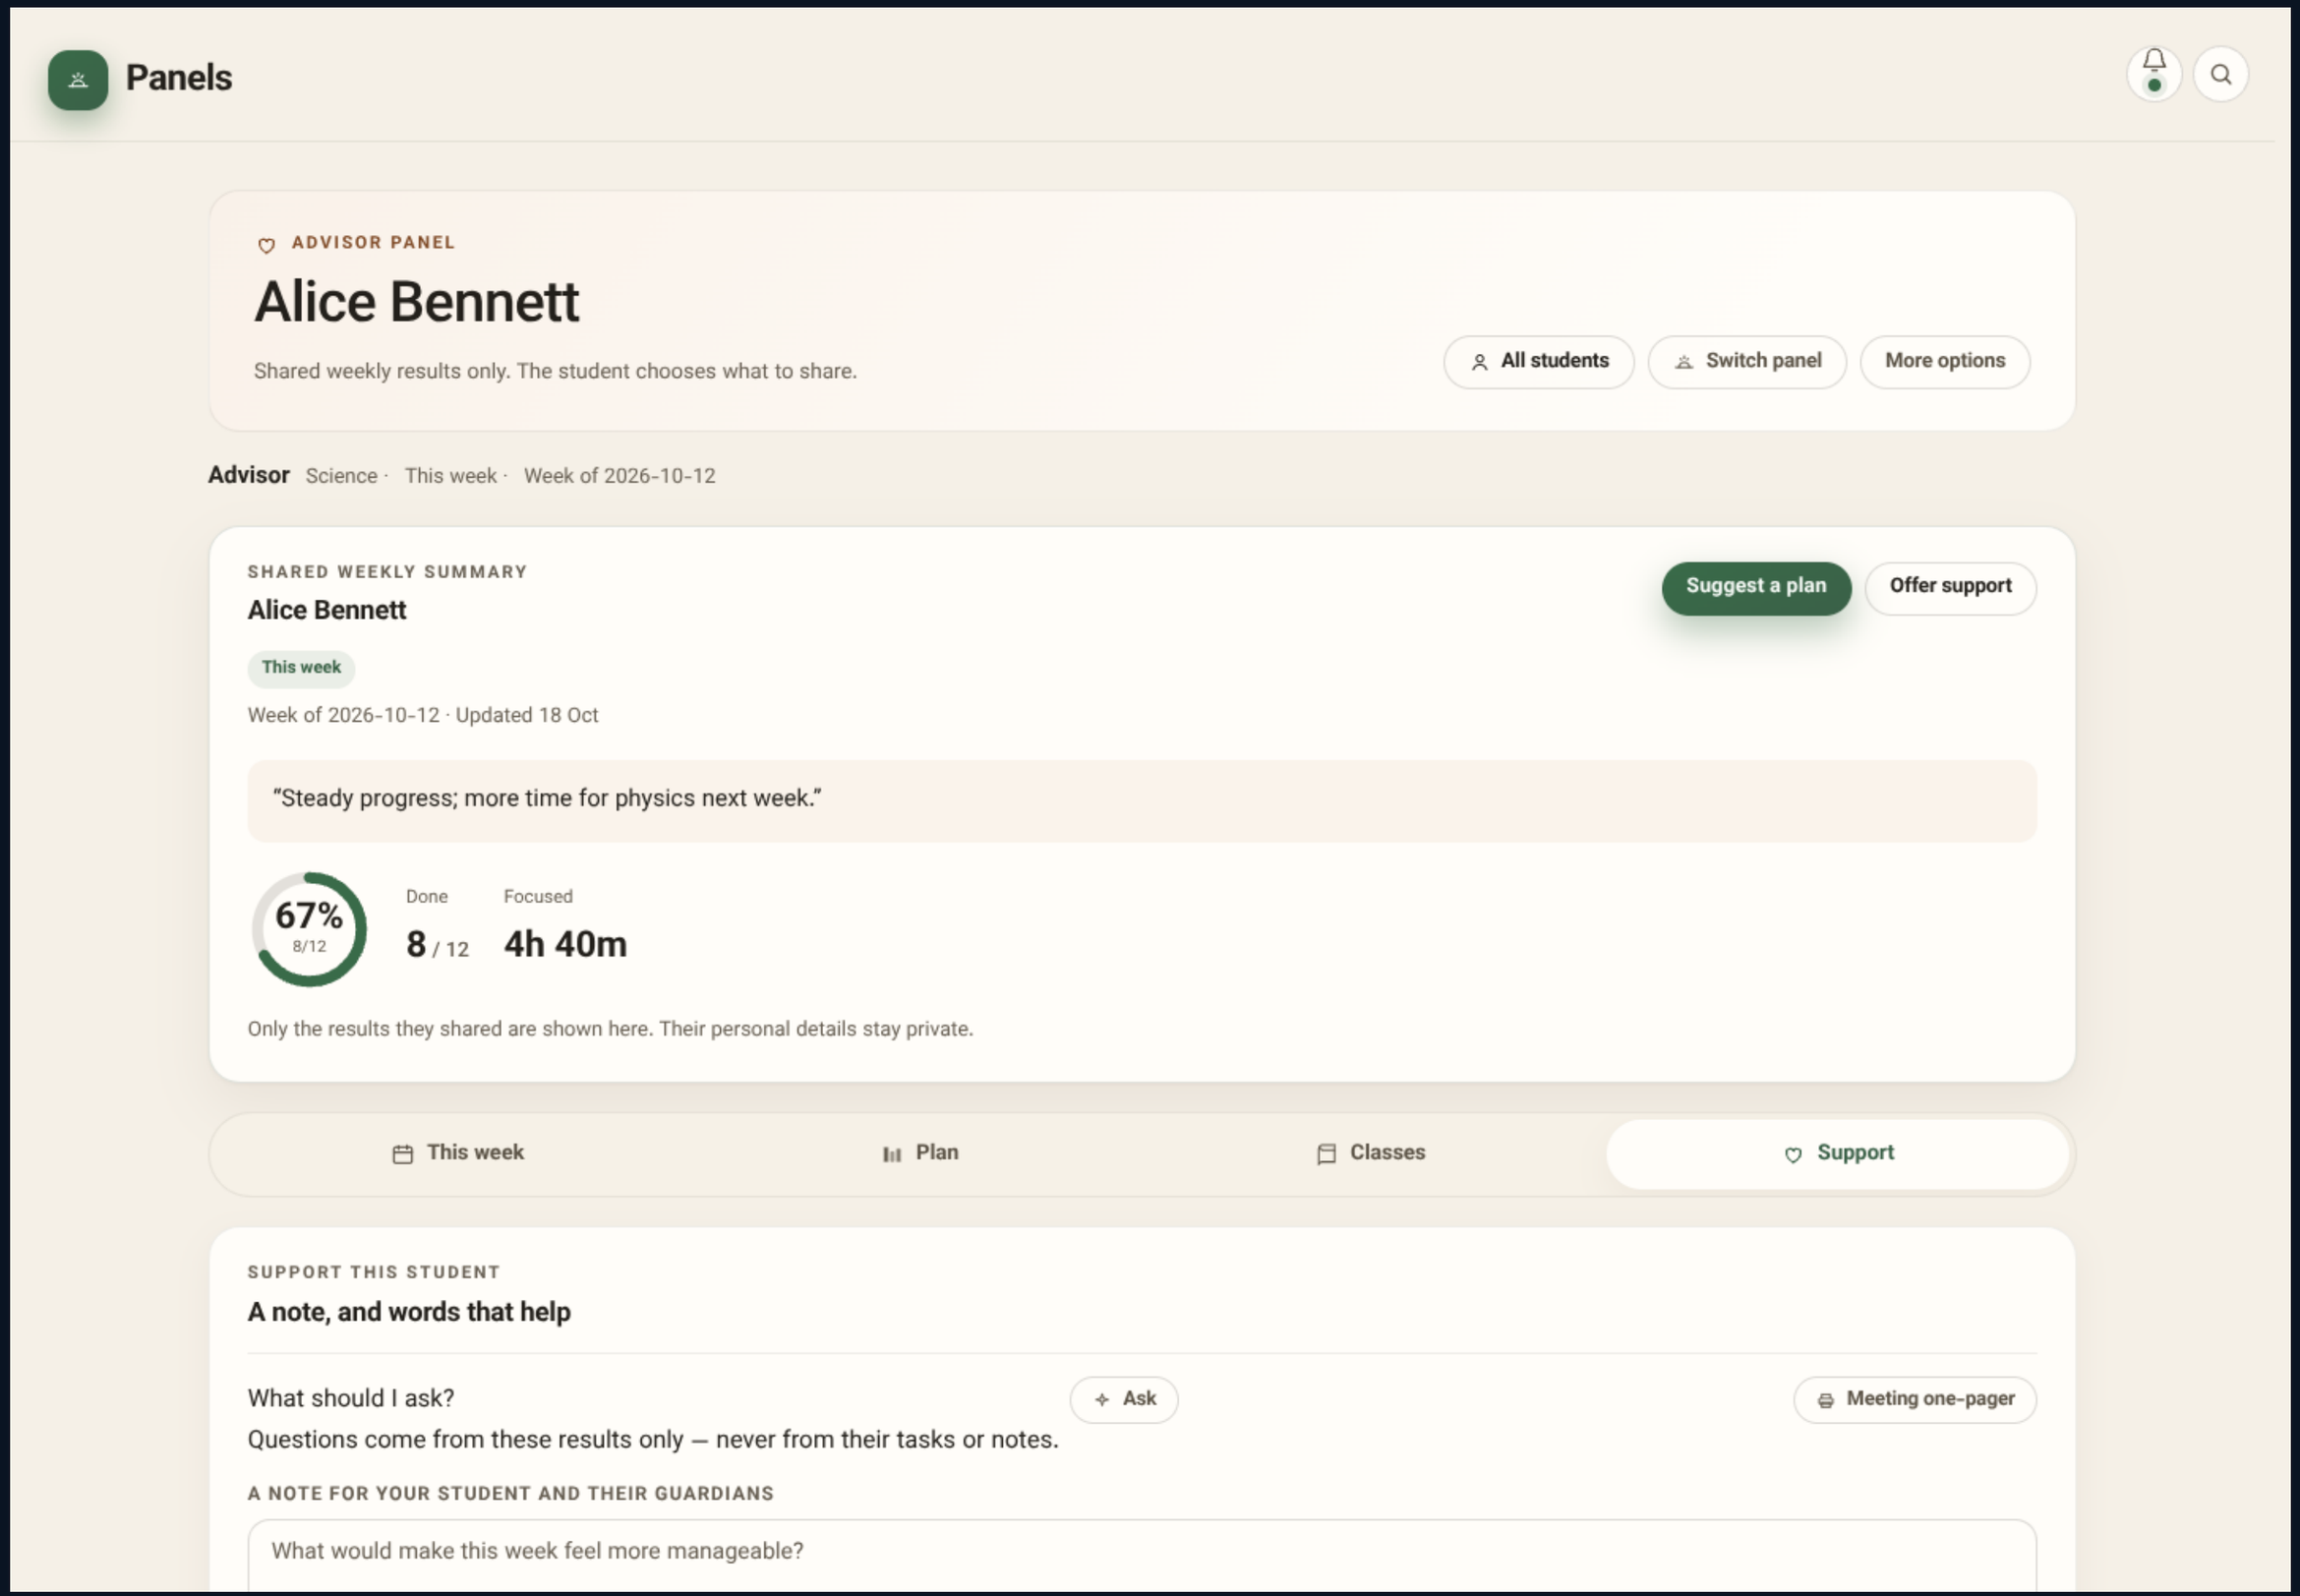

Write a class title, subject, description and external video link. Multi-select students; each keeps an independent completion status.

Assign and review homework

Assign instructions/deadlines to selected students. Review decrypts submitted photos; approval deletes hosted photos and retains status plus feedback. This local demo has no uploaded photos: live upload/review was not tested.

Support: notes, AI and meetings

Optional AI suggests questions from shared results; edit a question into a note before sending. Generate a meeting one-pager. AI needs a configured service and sends request-relevant context to its provider; no live AI response is shown.

Praise and suggested goals

Panels

A NOTE FOR YOUR STUDENT AND THEIR GUARDIANS

What would make this week feel more manageable?

Send note 0/160

Say something kind

Not a task and not a plan. Something they can read again on a hard week.

You kept going this week, and I saw it.

You focused for 4h 40m this week. That is real work.

You finished 8 things you had planned.

Physics got your attention this week.

However this week went, I noticed you keeping at it.

Send 0/160

Goals

Something bigger than this week. They say yes or not now — only a yes reaches their planner.

Suggest a goal

Aiming for 2026-11-07

Build a steady physics routine

Small sessions are easier to sustain than a last-minute rush.

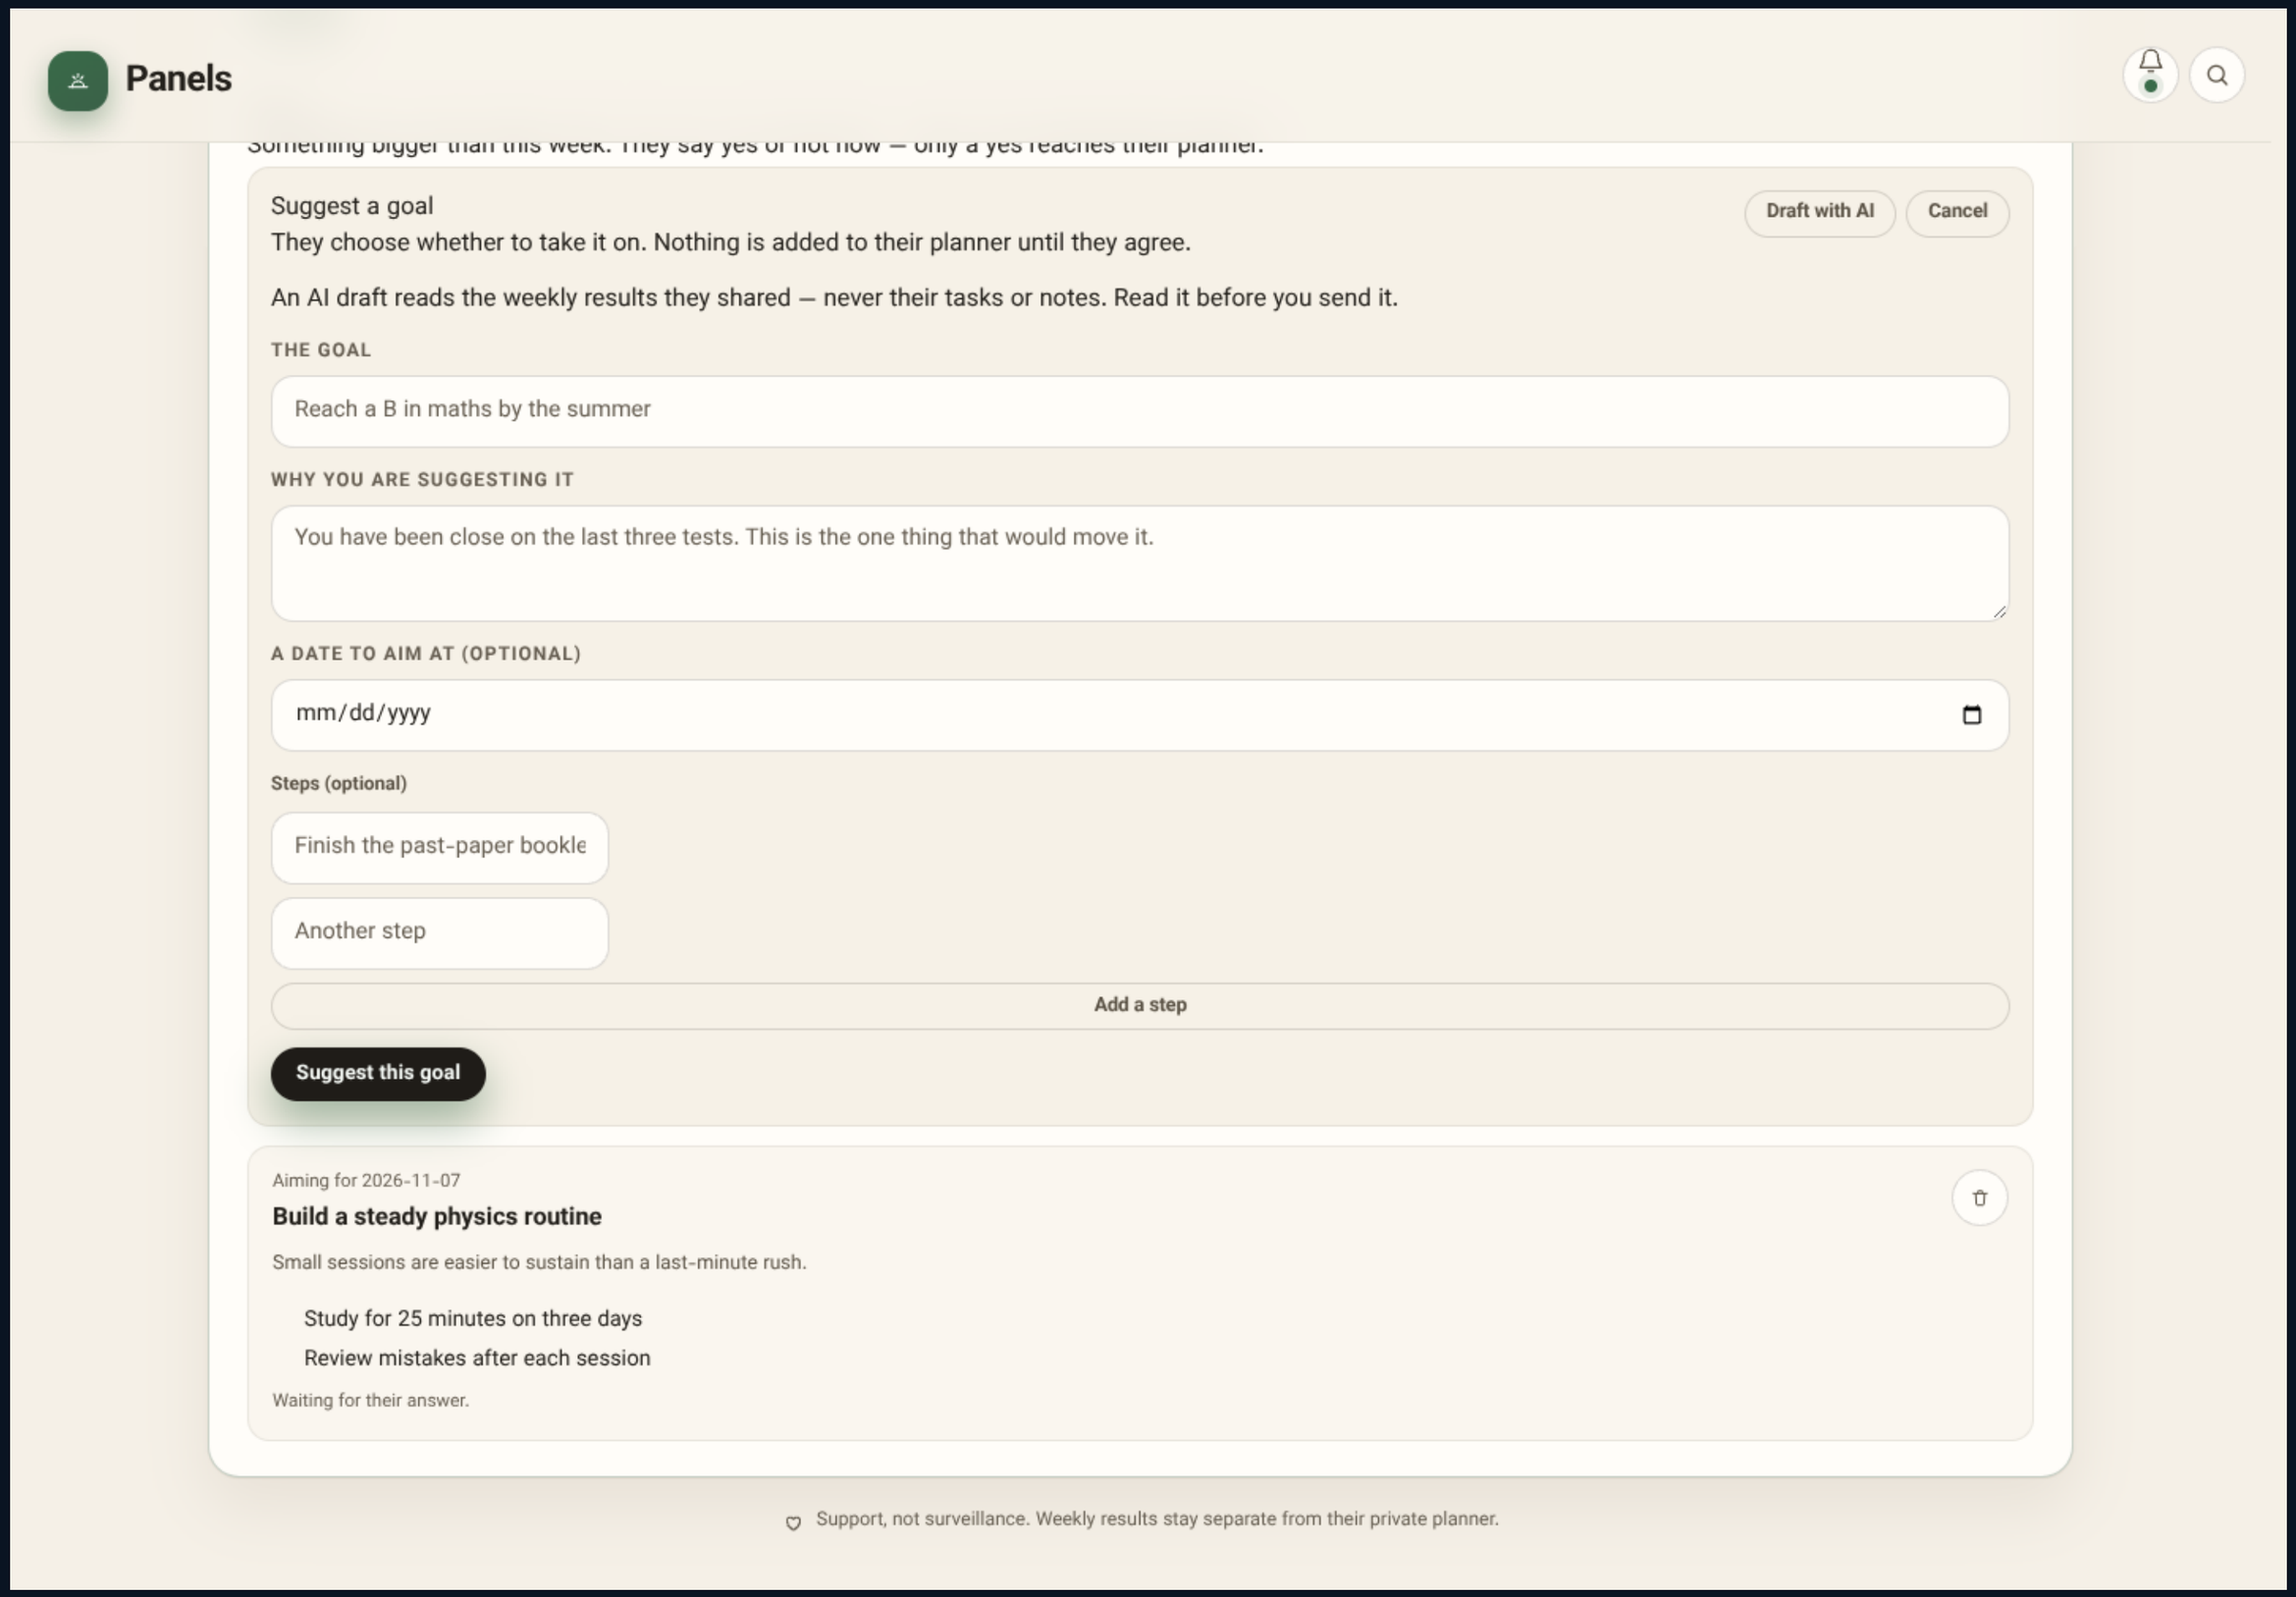

- Study for 25 minutes on three days
- Review mistakes after each session

Waiting for their answer.

Support, not surveillance. Weekly results stay separate from their private planner.

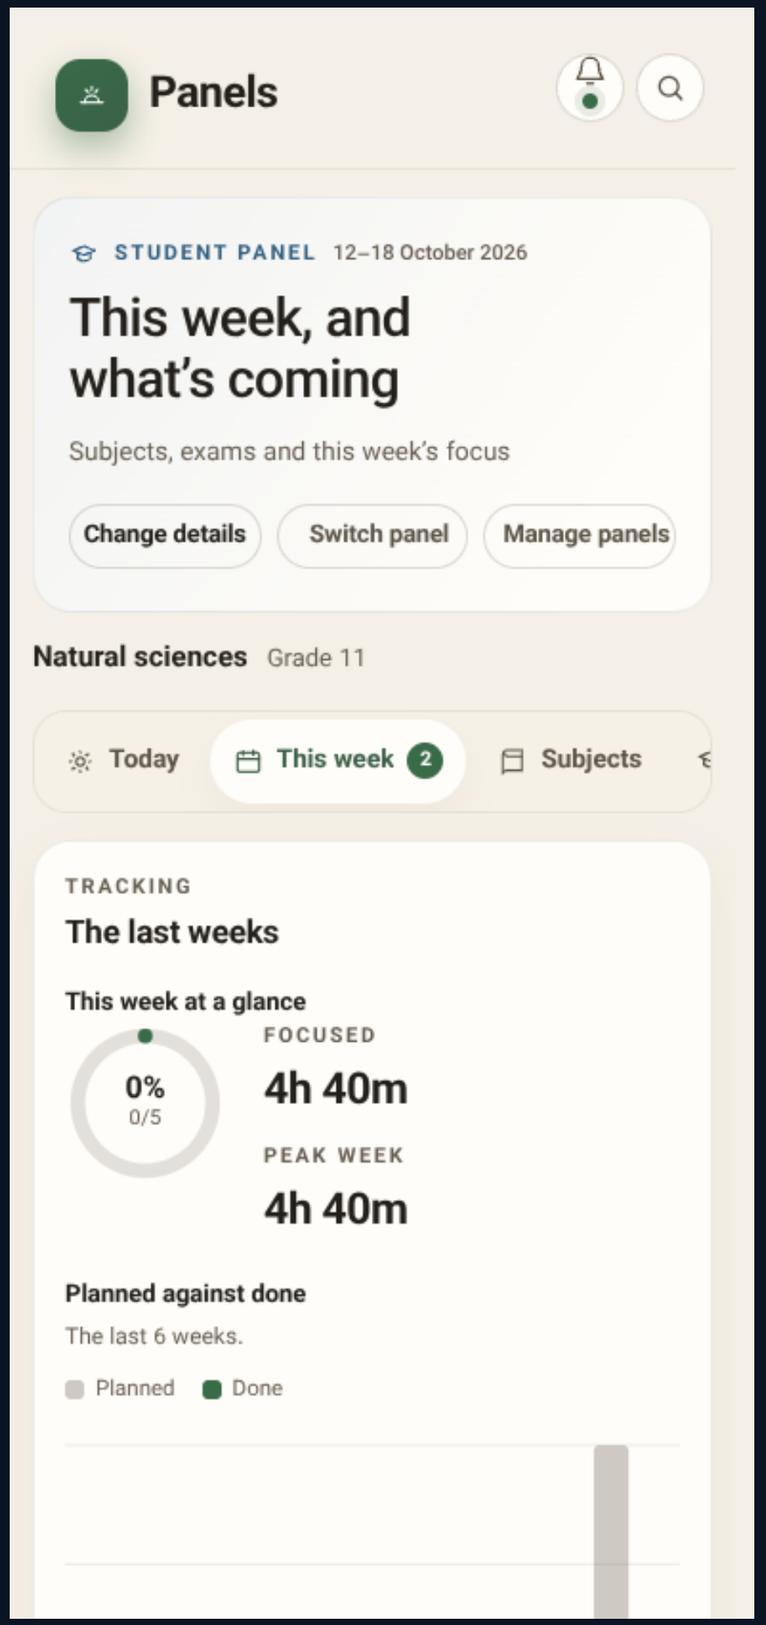

Keep encouragement distinct from tasks. Goal suggestions become personal goals only when the student accepts.

Suggest a goal—with student consent

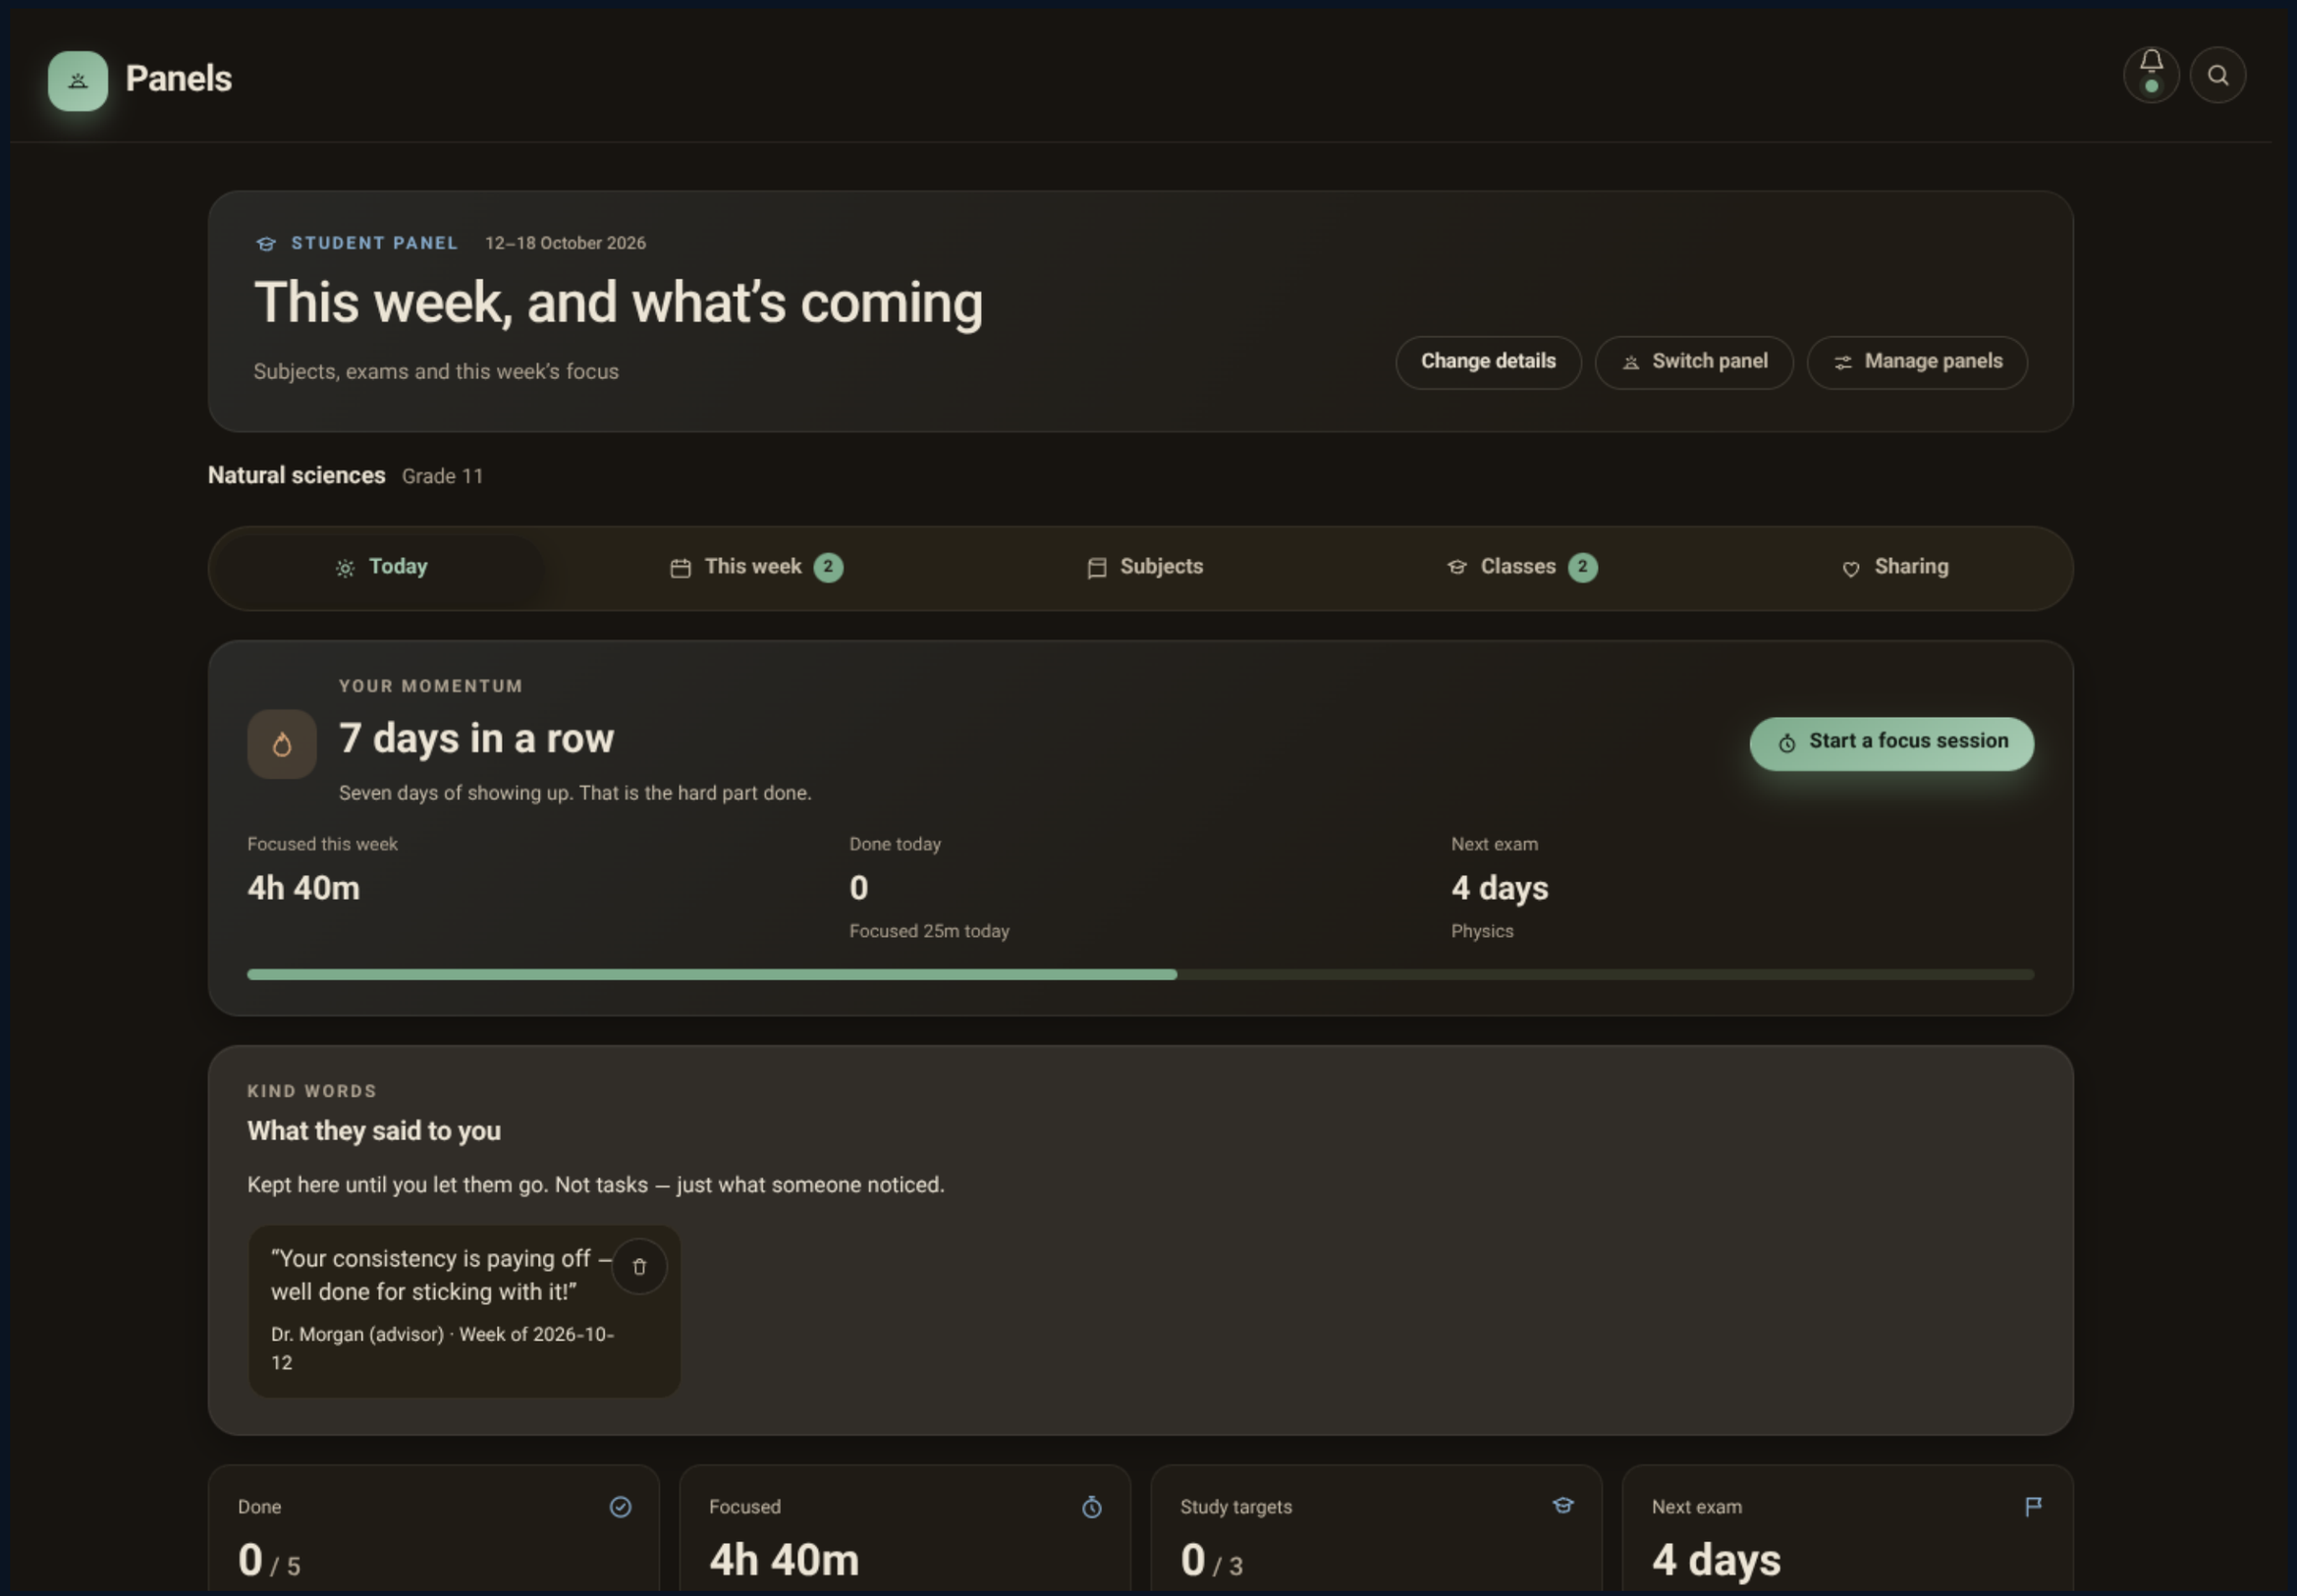

Guardian writes the goal, optional target and steps. The student chooses Take it on or Not now; accepting creates a personal goal.

Student on mobile

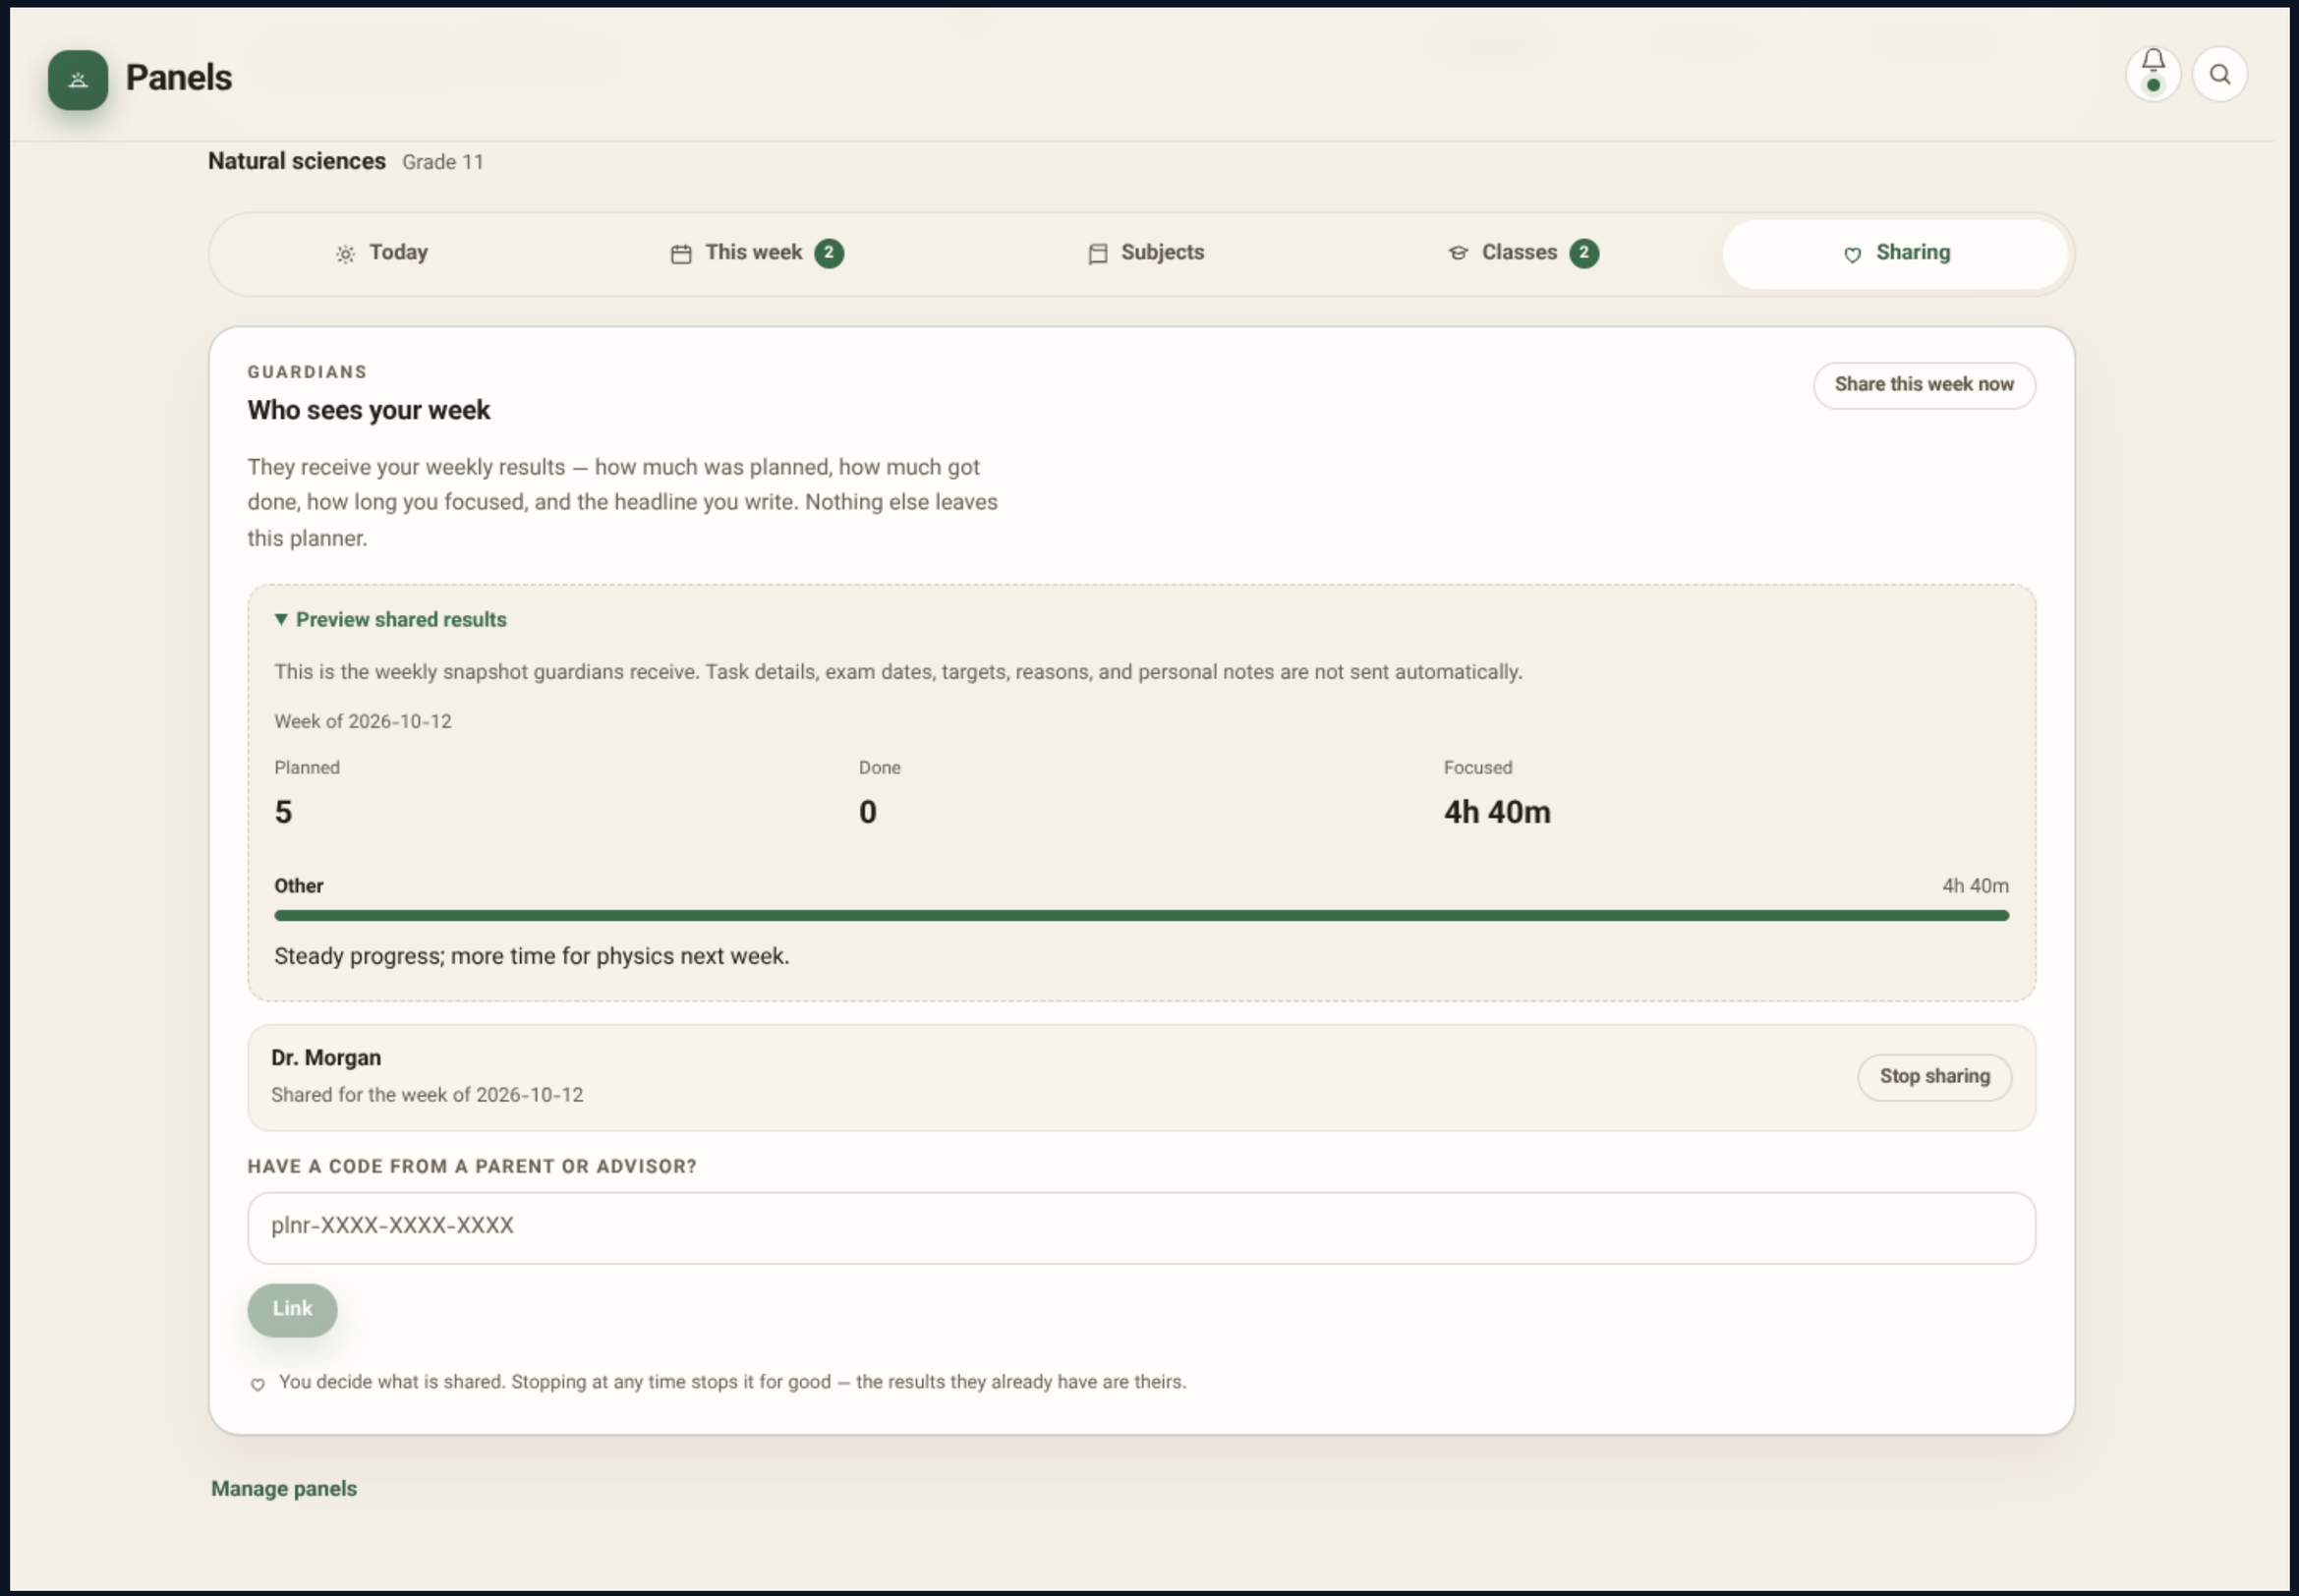

Responsive tabs and touch-friendly controls support daily use. The same panels support light/dark themes and Persian RTL.

The same workspace in dark mode

Student and guardian workflows support light/dark themes, keyboard navigation and responsive layouts.

How both sides work together

CONNECT → Guardian suggests a plan/assigns work → Student studies, ticks and reports → Guardian reviews, replies and supports → Both adapt. Weekly snapshots share totals, not private planner details. Remote delivery happens after sync.
